

### AMG ACQUIRES NEW PREMISES IN CASTLEFORD

AMG Systems Ltd are proud to announce their acquisition of an impressive 15,000 sq ft industrial property combining warehouse and office space at Pioneer Way in Castleford, West Yorkshire.

For more than 25 years, the AMG brand has been synonymous with excellence in data transmission technology and have become the market leaders in providing environmentally robust Fibre, Analogue, IP/ Ethernet, Wireless & Hybrid communication transmission solutions to industries around the world.

Managing Director Steve Clarke commented 'With the current global shortage of components the new warehouse facility has already enabled us to put an additional £1M into inventory to help support our customers. In addition, this new facility will enable the next stage of the company's growth plans expanding AMG from a primarily UK centric company to a global player and we believe our new location will allow us to further expand our product range and stock to support this vision.'

'We are now perfectly positioned to give access to the main highway's infrastructure, from east to west and north to south - M62, A1 & M1. The new facility will complement our existing Biggleswade manufacturing site providing two locations from which we can offer service and training whilst affording reduced travel time to get to one of our operations.'

He added 'We have a fantastic creative team of engineers, designers, and support staff who work together to ensure our customers have the right products for their system requirements.'

#### Key Features

- The warehouse and office areas have been fully refurbished and re-fitted to a very high standard
- A studio has also been built and equipped to facilitate the production of in-house digital photography and broadcast video
- The Castleford site will also house the new marketing, advertising and content production department which will take in-house, all aspects of digital and traditional marketing
- The building is also carbon efficient with solar roof panels providing power for the building, with spare capacity flowing back to the grid.
- With 15,000 square feet of floor space, over 70 car parking spaces and built on over an acre of land, this facility has plenty of capacity for growth and development into the future

As a global leader in Ethernet and Fibre Optic transmission solutions, AMG Systems operates to the highest design, manufacturing, and service delivery standards and are an ISO 9001 accredited company, so you can be assured of ongoing commitment to service and quality.
