## Chapter 1 Introduction

### 1.1 Introduction

With a built-in world-class 4G LTE module, you just need to insert SIM card from local mobile carrier to get to the Internet. The dual SIM design provides a more reliable WAN connection for critical applications. By using VPN tunneling technology, remote sites easily become a part of the Intranet, and all data is transmitted in a secure (256-bit AES encryption) link. The feature of DI/DO allows gateways to have real-time response whenever events are detected by sensors.

The AMG750 series product is loaded with many security features including VPN, firewall, NAT, port forwarding, DHCP server and many other powerful features for outdoor IP surveillance applications. The redundancy design in fallback 24-56 VDC power terminal, and dual SIM cards make the data transmission, and network connection stable and reliable.

Main Features:

- Built-in high speed LTE modem with dual SIMs for uplink traffic failover.
- Gigabit Ethernet ports and 802.3at PoE capability to simplify the deployment of PoE devices.
- RS-232/485 serial port for controlling legacy serial devices or Modbus devices.
- Digital I/O ports for integrating sensors, switch, or other alarm devices.
- 802.11n/ac 2.4G/5GHz selectable WiFi access point.
- Designed with a solid and easy-to-mount metal body for industrial environment to work with a variety of M2M (Machine-to-Machine) applications.

Before you install and use this product, please read this manual in detail for fully exploiting the functions of this product.

## 1.2 Contents List

### 1.2.1 Package Contents

Items	Description	Contents	Quantity
1	AMG750 Series 4G PoE IIoT Gateway		1pcs
2	8 pin Terminal Block		1pcs
3	4 pin Terminal Block		1pcs
4	RJ45 Cable		1pcs
5	DIN-Rail Bracket		1pcs

# 4G PoE IIoT Gateway

## 1.2.2 Optional Accessories

Optional parts (these parts are sold separately)

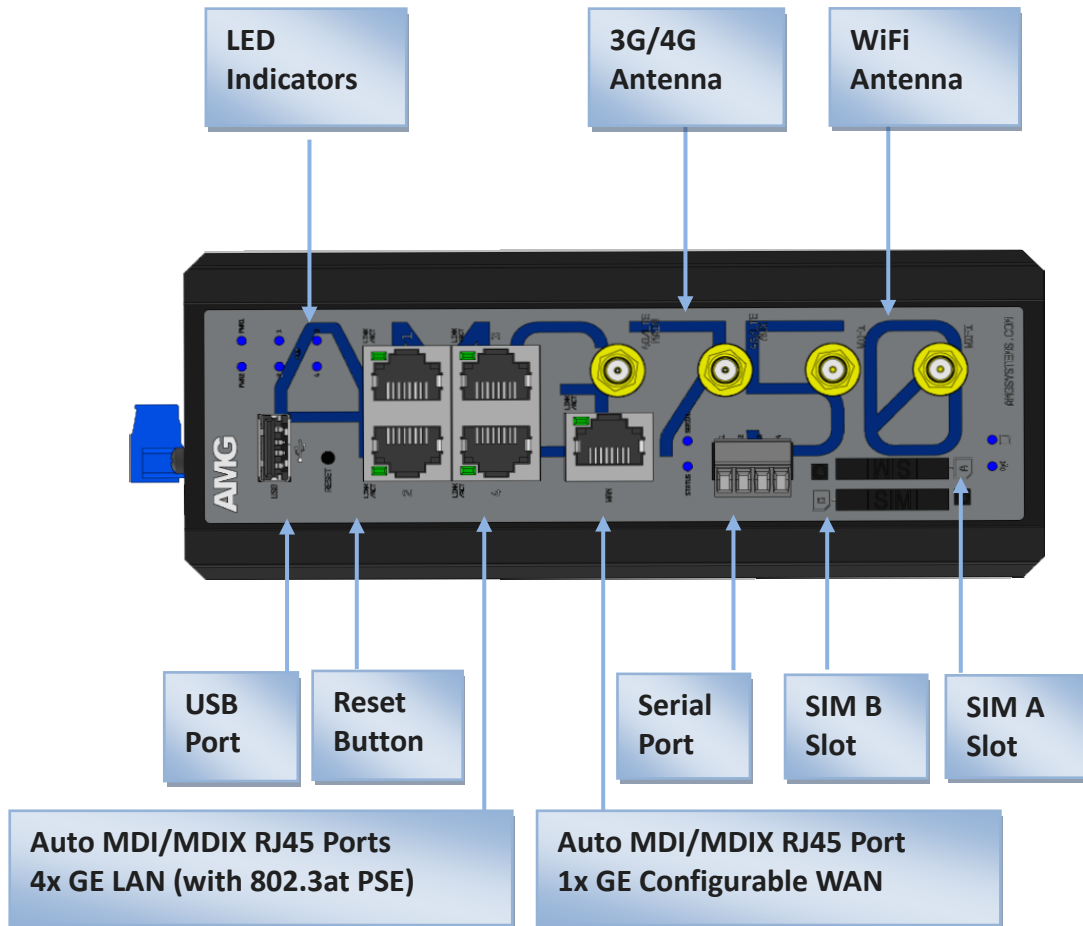

Items	Description	Contents	Comments
1	Power Supply (AMGPSU-I48-P120)		INPUT: 100-240VAC/1.4A 50/60Hz OUTPUT: 48V/2.5A Total Watt: 120W
2	Power Supply (AMGPSU-I48-P240)		INPUT: 100-240VAC/2.6A 50/60Hz OUTPUT: 48V/5A Total Watt: 240W

These parts are sold separately. If necessary, please contact us [sales@amgsystems.com](mailto:sales@amgsystems.com)

# 4G PoE IIoT Gateway

## 1.3 Hardware Configuration

### ➤ Front View

### ※Reset Button

The RESET button provides user with a quick and easy way to resort the default setting. Press the RESET button continuously for 6 seconds, and then release it. The device will restore to factory default settings.

### ※ 3G/4G, WiFi Antenna

The 3G/4G and WiFi antennas included in the standard package are for proof of concept use only and are not designed to be permanent fixtures for the final installation. You need to purchase the correct suitable antennas and required RF cables to fit your application.

## 1.5 Installation & Maintenance Notice

### 1.5.1 SYSTEM REQUIREMENTS

Network Requirements	<ul style="list-style-type: none"><li>• An gigabit Ethernet RJ45 cable</li><li>• 3G/4G cellular service subscription</li><li>• IEEE 802.11 a/b/g/n/ac wireless clients</li><li>• 10/100/1000 Ethernet adapter on PC</li></ul>
Web-based Configuration Utility Requirements	<p><b>Computer with the following:</b></p> <ul style="list-style-type: none"><li>• Windows®, Macintosh, or Linux-based operating system</li><li>• An installed Ethernet adapter</li></ul> <p><b>Browser Requirements:</b></p> <ul style="list-style-type: none"><li>• Internet Explorer 6.0 or higher</li><li>• Chrome 2.0 or higher</li><li>• Firefox 3.0 or higher</li><li>• Safari 3.0 or higher</li></ul>

### 1.5.2 WARNING

#### **Attention**

- Only use the power supply that complys with the power specification of the gateway, and can support enough Power to the conneted PoE devicves.
- Do not open or repair the case yourself. If the product is too hot, turn off the power immediately and have it repaired at a qualified service center.

# 4G PoE IIoT Gateway

---

## **Federal Communication Commission Interference Statement**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

## **FOR PORTABLE DEVICE USAGE (<20m from body/SAR needed)**

### **Radiation Exposure Statement:**

The product comply with the FCC portable RF exposure limit set forth for an uncontrolled environment and are safe for intended operation as described in this manual. The further RF exposure reduction can be achieved if the product can be kept as far as possible from the user body or set the device to lower output power if such function is available.

## **FOR MOBILE DEVICE USAGE (>20cm/low power)**

### **Radiation Exposure Statement:**

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

## **FOR COUNTRY CODE SELECTION USAGE (WLAN DEVICES)**

Note: The country code selection is for non-US model only and is not available to all US model. Per FCC regulation, all WiFi product marketed in US must fixed to US operation channels only.

### 1.5.3 HOT SURFACE CAUTION

**CAUTION:** The surface temperature for the metallic enclosure can be very high! Especially after operating for a long time, installed at a closed cabinet without air conditioning support, or in a high ambient temperature space.

**DO NOT touch the hot surface with your fingers while servicing!!**

# 4G PoE IIoT Gateway

## 1.5.4 Product Information for CE RED Requirements

The following product information is required to be presented in product User Manual for latest CE RED requirements.<sup>1</sup>

### (1) Frequency Band & Maximum Power

#### 1.a Frequency Band for Cellular Connection (for ME3630 E1C version)<sup>2</sup>

Band number	Operating Frequency	Max output power
LTE FDD BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23 ±2.7 dBm
LTE FDD BAND 3	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	
LTE FDD BAND 7	Uplink: 2500-2570 MHz Downlink: 2620-2690 MHz	
LTE FDD BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
LTE FDD BAND 20	Uplink: 832-862 MHz Downlink: 791-821 MHz	
WCDMA BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	24 +1/-3 dBm
WCDMA BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
E-GSM	Uplink: 880-915 MHz Downlink: 925-960 MHz	33 ±2 dBm
DCS	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	30 ±2 dBm

#### 1.b Frequency Band for Cellular Connection (for EC25-E version)

Band number	Operating Frequency	Max output power
LTE FDD BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23.1 dBm
LTE FDD BAND 3	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	23.0 dBm
LTE FDD BAND 7	Uplink: 2500-2570 MHz Downlink: 2620-2690 MHz	22.8 dBm
LTE FDD BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	23.2 dBm
LTE FDD BAND 20	Uplink: 832-862 MHz	23.5 dBm

1 The information presented in this section is ONLY valid for the EU/EFTA regional version. For those non-CE/EFTA versions, please refer to the corresponding product specification.

2 There can be different cellular module integrated in the device for EU/EFTA regional version. Refer to the cellular module identifier printed on the device label for the purchased device.

## 4G PoE IIoT Gateway

	Downlink: 791-821 MHz	
LTE FDD BAND 38	Uplink: 2570-2620 MHz Downlink: 2570-2620 MHz	21.7 dBm
LTE FDD BAND 40	Uplink: 2300-2400 MHz Downlink: 2300-2400 MHz	21.5 dBm
WCDMA BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23.3 dBm
WCDMA BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
E-GSM	Uplink: 880-915 MHz Downlink: 925-960 MHz	32.9 dBm
DCS	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	29.9 dBm

### 1.c Frequency Band for Wi-Fi Connection

Band	Operating Frequency	Max. Output Power (EIRP)
2.4G	2.4 – 2.4835 GHz	100 mW
5G	5.15 – 5.25 GHz	200 mW

### (2) 5150 ~ 5350MHz In Door Use Statements

This product equips the IEEE 802.11ac compliance 5GHz wireless radio module. According to the RED requirement, the channels covered in the 5150 ~ 5350 MHz frequency band are In Door Use Only.

### (3) Contries List for Restrictions (for products with 5GHz radio)

For EU/EFTA, this product can be used in all EU member states and EFTA countries.

---

## **(4) DoC Information**

You can get the DoC information of this product on request.

## **(5) RF Exposure Statements**

The antenna of the product, under normal use condition, is at least 20 cm away from the body of user.

## **(6) Unit Mounting Notice**

The product is suitable for mounting at heights  $\leq 2\text{m}$  (approx. 6 ft), or in a cabinet.

Ensure the unit is fixed tightly to reduce the likelihood of injury due to exposure to mechanical hazards if dropped.

## 1.6 Hardware Installation

This chapter describes how to install and configure the hardware

### 1.6.1 Mount the Unit

The AMG750 series product can be mounted on a wall, horizontal plane, or DIN Rail in a cabinet with the mounting accessories (brackets or DIN-rail kit). The mounting accessories are not screwed on the product when shipped from the factory. Please screw the wall-mount kits or DIN-rail bracket on the product first.

### 1.6.2 Insert the SIM Card

**WARNING: BEFORE INSERTING OR CHANGING THE SIM CARD, PLEASE MAKE SURE THAT POWER OF THE DEVICE IS SWITCHED OFF.**

The SIM card slots are located at the front side of the device housing. You need to push the button and pull the SIM card loader out before installing or removing the SIM card. Please follow the instructions to insert a SIM card. After SIM card is well placed, push the SIM card loader into its slot.

#### Step 1:

Push the button by a tack to unlock and eject SIM socket.

#### Step 2:

Put SIM card in the socket firmly.

#### Step 3:

Put back SIM socket into the SIM slot.

## 4G PoE IIoT Gateway

### 1.6.3 Install the External RF Cable and Antenna

As illustrated in Section 1.3, there are several SMA antenna Jacks for you to install the required RF cables and antennas for the RF signal transmission and receiving. You have to purchase required RF cables and antennas separately for a specific project or installation site to get excellent RF performance.

Since there is limited spacing for allocating all SMA antenna Jacks around the enclosure, the separation among SMA Jacks (or direct-attached antennas) could be not the optimized arrangement. **It is not recommended to attach the SMA antennas directly to the SMA Jacks.** It is very likely to get degraded RF performance at specific circumstances. It depends heavily on the environment.

However, there are well-known rules of thumb for solving the antenna separation issue.

- 1: The horizontal distance between antennas should be greater than 1/4 of its wavelength, and there will be best separation at 1/2 of its wavelength.*
- 2. If multiple frequency antennas are near each other, then use spacing distance of the lower frequency antenna, or even better try to satisfy the rule for both frequencies.*

**Wavelength Table for Major RF Category**

RF Category	Frequency	Wavelength	1/2 Wave Length (Best Separation)	1/4 Wave Length (Good Separation)
WiFi 802.11	5.8GHz	5.2cm	2.6cm	1.3cm
WiFi 802.11	2.4GHz	12.5cm	6.2cm	3.1cm
Cellular LTE	2600MHz	11.5cm	5.8cm	2.9cm
Cellular LTE	2100MHz	14.3cm	7.1cm	3.7cm
Cellular LTE	900MHz	33.3cm	16.6cm	8.3cm
Cellular LTE	700MHz	42.8cm	21.4cm	10.7cm
GPS	1.57GHz	19.0cm	9.5cm	4.7cm

For example, if you have a 900MHz LTE antenna and a WiFi 2.4GHz antenna, you would want them to be separated by at least 8.3cm to get good antenna separation.

**So, it is recommended to use some external RF cables to extend and separate the adjacent antennas and get better antenna separation and RF performance, if required.**

# 4G PoE IIoT Gateway

## 1.6.4 Connecting DI/DO Devices

There are one DI and one DO ports together with power terminal block. Please refer to following specification to connect DI and DO devices.

Mode	Specification	
Digital Input	Trigger Voltage (high)	Logic level 1: 5V~30V
	Normal Voltage (low)	Logic level 0: 0V~2V
Digital Output	Voltage (Relay Mode)	Depends on external device maximum voltage is 30V
	Maximum Current	1A

### Example of Connection Diagram

## 1.6.5 Connecting Serial Devices

The AMG750 series products provide 4-pin Terminal Block serial port for connecting to your serial device. Connect the serial device to the terminal block with the right pin assignments of RS-232/485 are shown as below.

Pin 1    2    3    4

	Pin1	Pin2	Pin3	Pin4
RS-232	GND	RXD	TXD	GND
RS-485	GND	DATA-	DATA+	GND

# 4G PoE IIoT Gateway

## 1.6.6 Connecting Power

The AMG750 series product can be powered by connecting one or two power sources to the terminal block. **It supports dual 24 to 56V DC power inputs.** Following picture indicates the power terminal block pin assignments. Please check carefully and connect to the right power requirements and polarity.

For the dual power supply design on PWR1 and PWR2, the power supply mode can be either primary/backup or concurrent modes. It depends on the voltage for PWR1 and PWR2.

If the voltage difference between PWR1 and PWR2 is greater than 5.0 volt (this is the case for using two power supplies with the different external spec., such as 48V and 24V), the power control circuit works in primary / backup power mode. The one with higher voltage is treated the primary power, and the other one is regarded as a backup power. Normally, only the primary power supplies the required power to the gateway and connected PoE devices; the backup power supply will supply the power to the gateway and connected PoE devices only when the primary power fails.

If the voltage difference between PWR1 and PWR2 is less than 0.5 volt (this is the case for using two power supply with the same external spec., such as 48V), the power control circuit works in concurrent mode. Both PWR1 and PWR2 supply required power to the gateway and connected PoE devices simultaneously.

Note: There may be an ambiguous situation for the voltage difference is less than 5.0 volt, but greater than 0.5 volt. Please be assure that the external power supply can supply enough power that the system required, or you may encounter the ambiguous situation that for some times, one on the power is the primary power, and some times if the loading increased, the power control circuit may switch to concurrent mode that PWR1 and PWR2 supply power at the same time.

## 1.6.7 Power Supply Installation

The power supply is an optional unit, is not included in the standard package. You have to purchase or prepare external power supply unit for providing power to the gateway. Hereunder is an example for the Industrial power supply installation.

### ➤ AC Power Cable Installation

The power supply unit power requirement is 100-240V AC, 50/60Hz with power input lines. AWG 18 power cable is recommended.

# 4G PoE IIoT Gateway

The terminal pin number assignment as below

Pin No.	Assignment
1	FG 
2	AC/N
3	AC/L

Please connect the live line, neutral line and earth line to the corresponding location.

## ➤ DC Power Terminal Block Installation

The Power Supply unit may consist of one set or two sets of DC power output contacts.

You can connect the DC power supply and the terminal block power pins, as shown below, of the gateway with a power cable. AWG 18 power cable is recommended.

Insert DC power wires into the contacts PWR1 or PWR2. The +V connect to PWR and then -V connect to GND. After that, plug in the terminal block to the socket at the side of the gateway.

## 4G PoE IIoT Gateway

---

Finally, connect the power plug of the power supply cable to an outlet, then the power supply units will turn on and provide DC power to the connected device.

# 4G PoE IIoT Gateway

---

## 1.6.8 Connecting to the Network or a Host

The AMG750 series provides RJ45 ports to connect 10/100/1000Mbps Ethernet. It can auto detect the transmission speed on the network and configure itself automatically. Connect one Ethernet cable to the RJ45 port (LAN) of the device and plug another end of the Ethernet cable into your computer's network port. In this way, you can use the RJ45 Ethernet cable to connect to the host PC's Ethernet port for configuring the device.

## 1.6.9 Setup by Configuring WEB UI

You can browse web UI to configure the device.

Type in the IP Address (<http://192.168.1.101>)<sup>3</sup>

When you see the login page, enter the user name and password and then click '**Login**' button. The default setting for both username and password is '**admin**'<sup>4</sup>.

The image shows a web-based login interface for a router configuration. It has a solid blue background. At the top, white text reads: "Welcome to the router configuration interface. Enter the password and click 'Login'". Below this, there are two white input fields. The first is labeled "Username" and the second is labeled "Password". At the bottom center, there is a blue, rounded rectangular button with the word "Login" in white text.

---

<sup>3</sup> The default LAN IP address of this gateway is 192.168.1.254. If you change it, you need to login by using the new IP address.

<sup>4</sup> For security consideration, you are strongly recommended to change the login username and password from default values. Refer to Section 6.1.2 for how to change the setting.

## Chapter 2 Basic Network

### 2.1 WAN & Uplink

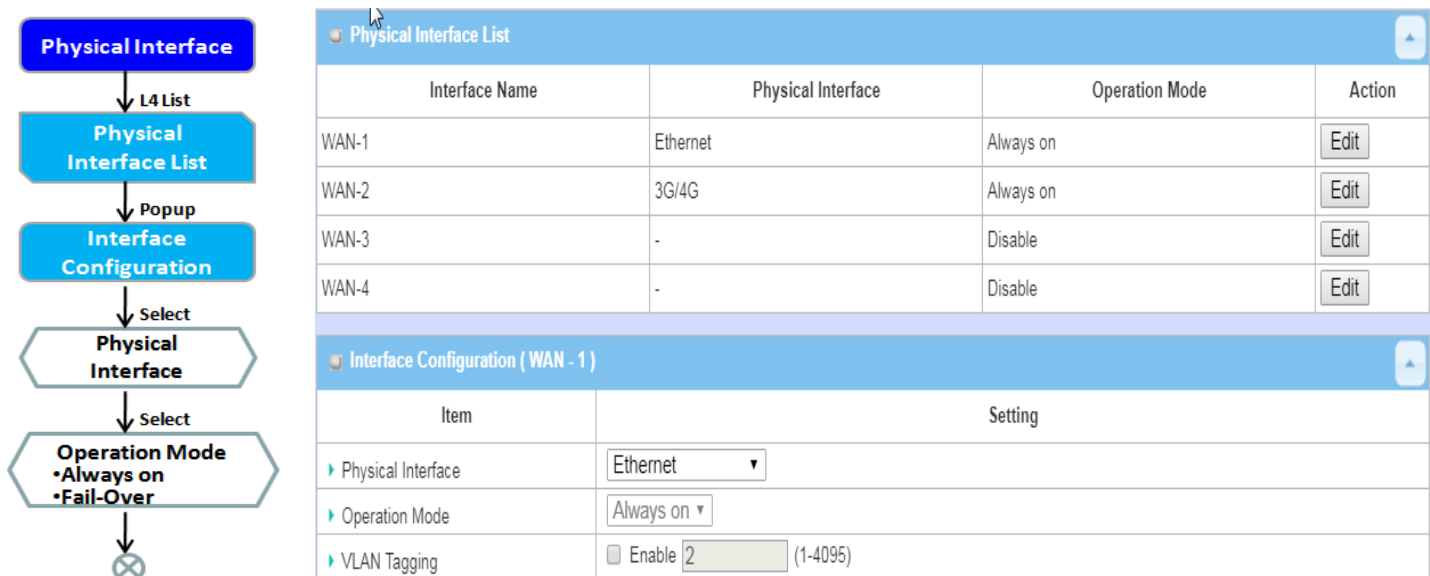

The gateway provides multiple WAN interfaces to let all client hosts in Intranet of the gateway access the Internet via ISP. But ISPs in the world apply various connection protocols to let gateways or user's devices dial in ISPs and then link to the Internet via different kinds of transmit media.

So, the WAN Connection lets you specify the WAN Physical Interface, WAN Internet Setup and WAN Load Balance for Intranet to access Internet. For each WAN interface, you must specify its physical interface first and then its Internet setup to connect to ISP. Besides, since the gateway has multiple WAN interfaces, you can assign physical interface to participate in the Load Balance function.

# 4G PoE IIoT Gateway

## 2.1.1 Physical Interface

M2M gateways are usually equipped with various WAN interfaces to support different WAN connection scenarios for requirements. You can configure the WAN interface one by one to get proper internet connection setup. **Refer to the product specification for the available WAN interfaces in the product you purchased.**

The first step to configure one WAN interface is to specify which kind of connection media to be used for the WAN connection, as shown in "Physical Interface" page.

In "Physical Interface" page, there are two configuration windows, "Physical Interface List" and "Interface Configuration". "Physical Interface List" window shows all the available physical interfaces. After clicking on the "Edit" button for the interface in "Physical Interface List" window the "Interface Configuration" window will appear to let you configure a WAN interface.

### Physical Interface:

- **Ethernet WAN:** The gateway has one or more RJ45 WAN ports that can be configured to be WAN connections. You can directly connect to external DSL modem or setup behind a firewall device.
- **3G/4G WAN:** The gateway has one built-in 3G/4G cellular as WAN connection. For each cellular WAN, there are 1 or 2 SIM cards to be inserted for special failover function.

- Please **MUST POWER OFF** the gateway before you insert or remove SIM card.
- The SIM card can be damaged if you insert or remove SIM card while the gateway is in operation.

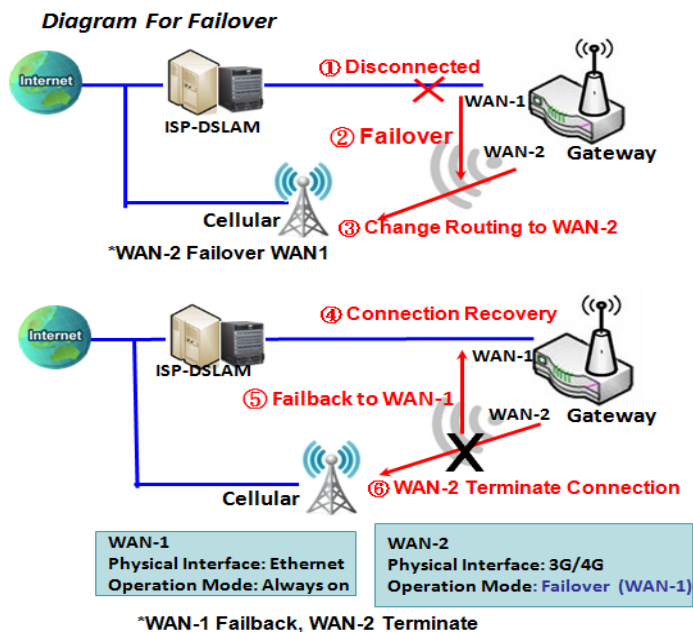

# 4G PoE IIoT Gateway

## Operation Mode:

There are three option items "Always on", "Failover", and "Disable" for the operation mode setting.

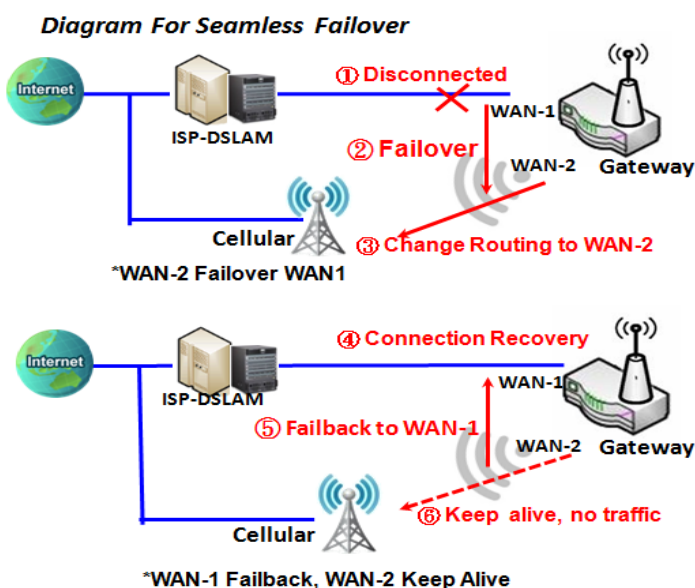

**Always on:** Set this WAN interface to be active all the time. When two or more WAN are established at "Always on" mode, outgoing data will through these WAN connections base on load balance policies.

## Failover:

A failover interface is a backup connection to the primary. That means only when its primary WAN connection is broken, the backup connection will be started up to substitute the primary connection. As shown in the diagram, WAN-2 is backup WAN for WAN-1. WAN-1 serves as the primary connection with operation mode "Always on". WAN-2 won't be activated until WAN-1 disconnected. When WAN-1 connection is recovered back with a connection, it will take over data traffic again. At that time, WAN-2 connection will be terminated.

## Seamless Failover:

In addition, there is a "Seamless" option for Failover operation mode. When seamless option is activated by checking on the "Seamless" box in configuration window, both the primary connection and the failover connection are started up after system rebooting. But only the primary connection executes the data transfer, while the failover one just keeps alive of connection line. As soon as the primary connection is broken, the system will switch, meaning failover, the routing path to the failover connection to save the dial up time of failover connection since it has been alive.

When the "Seamless" enable checkbox is activated, it can allow the Failover interface to be connected continuously from system booting up. Failover WAN interface just keeps connecting without data traffic.

## 4G PoE IIoT Gateway

---

The purpose is to shorten the switch time during failover process. So, when primary connection is disconnected, failover interface will take over the data transfer mission instantly by only changing routing path to the failover interface. The dialing-up time of failover connection is saved since it has been connected beforehand.

### **VLAN Tagging**

Sometimes, your ISP required a VLAN tag to be inserted into the WAN packets from Gateway for specific services. Please enable VLAN tagging and specify tag in the WAN physical interface. Please be noted that only Ethernet and ADSL physical interfaces support the feature. For the device with 3G/4G WAN only, it is disabled.

# 4G PoE IIoT Gateway

## Physical Interface Setting

Go to **Basic Network > WAN > Physical Interface** tab.

The Physical Interface allows user to setup the physical WAN interface and to adjust WAN's behavior.

Note: Numbers of available WAN Interfaces can be different for the purchased gateway.

Physical Interface List			
Interface Name	Physical Interface	Operation Mode	Action
WAN-1	Ethernet	Always on	Edit
WAN-2	3G/4G	Always on	Edit
WAN-3	-	Disable	Edit
WAN-4	-	Disable	Edit

When **Edit** button is applied, an **Interface Configuration** screen will appear. WAN-1 interface is used in this example.

## Interface Configuration:

Interface Configuration ( WAN - 1 )	
Item	Setting
Physical Interface	Ethernet
Operation Mode	Always on
VLAN Tagging	<input type="checkbox"/> Enable 2 (1-4095)

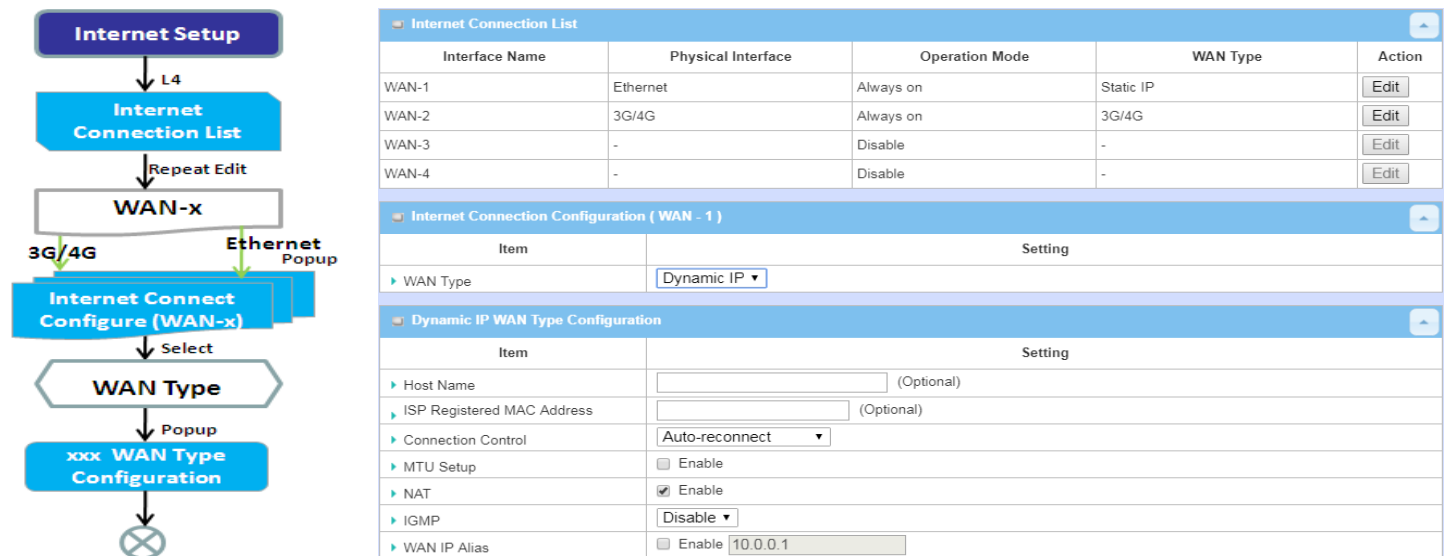

Interface Configuration		
Item	Value setting	Description
Physical Interface	1. A Must fill setting 2. WAN-1 is the primary interface and is factory set to Always on.	Select one expected interface from the available interface dropdown list. It can be <b>3G/4G</b> , or <b>Ethernet</b> . Depending on the gateway model, <b>Disable</b> and <b>Failover</b> options will be available only to multiple WAN gateways. WAN-2 ~ WAN-4 interfaces are only available to multiple WAN gateway.s
Operation Mode	A Must fill setting	Define the operation mode of the interface. Select <b>Always on</b> to make this WAN always active. Select <b>Disable</b> to disable this WAN interface. Select <b>Failover</b> to make this WAN a Failover WAN when the primary or the

# 4G PoE IIoT Gateway

		secondary WAN link failed. Then select the primary or the existed secondary WAN interface to switch Failover from.  (Note: for WAN-1, only <b>Always on</b> option is available.)
VLAN Tagging	Optional setting	Check <b>Enable</b> box to enter tag value provided by your ISP. Otherwise uncheck the box. <b><u>Value Range:</u></b> 1 ~ 4095.  Note: This feature is NOT available for 3G/4G WAN connection.

# 4G PoE IIoT Gateway

## 2.1.2 Internet Setup

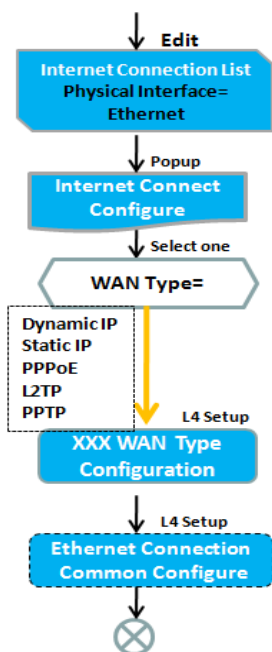

After specifying the physical interface for each WAN connection, administrator must configure their connection profile to meet the dial in process of ISP, so that all client hosts in the Intranet of the gateway can access the Internet.

In "Internet Setup" page, there are some configuration windows: "Internet Connection List", "Internet Connection Configuration", "WAN Type Configuration" and related configuration windows for each WAN type. For the Internet setup of each WAN interface, you must specify its WAN type of physical interface first and then its related parameter configuration for that WAN type.

After clicking on the "Edit" button of a physical interface in "Internet Setup List" window, the "Internet Connection Configuration" window will appear to let you specify which kind of WAN type that you will use for that physical interface to make an Internet connection. Based on your chosen WAN type, you can configure necessary parameters in each corresponding configuration window.

Query Interval	5 (seconds)
Latency Threshold	3000 (ms)

### WAN Type for Ethernet Interface:

Ethernet is the most common WAN and uplink interface for M2M gateways. Usually it is connected with xDSL or cable modem for you to setup the WAN connection. There are various WAN types to connect with ISP.

- **Static IP:** Select this option if ISP provides a fixed IP to you when you subscribe the service. Usually is more expensive but very important for cooperative requirement.
- **Dynamic IP:** The assigned IP address for the WAN by a DHCP server is different every time. It is cheaper and usually for consumer use.
- **PPP over Ethernet:** As known as PPPoE. This WAN type is widely used for ADSL connection. IP is usually different for every dial up.
- **PPTP:** This WAN type is popular in some countries, like Russia.
- **L2TP:** This WAN type is popular in some countries, like Israel.

### Configure Ethernet WAN Setting

When **Edit** button is applied, **Internet Connection Configuration** screen will appear. WAN-1 interface is used in this example.

▶ WAN Type	Static IP ▼

When you select it, "Static IP WAN Type Configuration" will appear. Items and setting is explained below

Static IP WAN Type Configuration	
Item	Setting
▶ WAN IP Address	<input type="text"/>
▶ WAN Subnet Mask	255.255.255.0 (/24) ▼
▶ WAN Gateway	<input type="text"/>
▶ Primary DNS	<input type="text"/>
▶ Secondary DNS	<input type="text"/> (Optional)

# 4G PoE IIoT Gateway

Static IP WAN Type Configuration		
Item	Value setting	Description
WAN IP Address	A Must filled setting	Enter the WAN IP address given by your Service Provider
WAN Subnet Mask	A Must filled setting	Enter the WAN subnet mask given by your Service Provider
WAN Gateway	A Must filled setting	Enter the WAN gateway IP address given by your Service Provider
Primary DNS	A Must filled setting	Enter the primary WAN DNS IP address given by your Service Provider
Secondary DNS	An optional setting	Enter the secondary WAN DNS IP address given by your Service Provider

## WAN Type= PPPoE

Item	Setting
▶ WAN Type	PPPoE ▼

When you select it, "PPPoE WAN Type Configuration" will appear. Items and setting is explained below

Item	Setting
▶ IP Type	IPv4 ▼
▶ PPPoE Account	<input type="text"/>
▶ PPPoE Password	<input type="password"/>
▶ Primary DNS	<input type="text"/> (Optional)
▶ Secondary DNS	<input type="text"/> (Optional)
▶ Service Name	<input type="text"/> (Optional)
▶ Assigned IP Address	<input type="text"/> (Optional)

PPPoE WAN Type Configuration		
Item	Value setting	Description
PPPoE Account	A Must filled setting	Enter the PPPoE User Name provided by your Service Provider.
PPPoE Password	A Must filled setting	Enter the PPPoE password provided by your Service Provider.
Primary DNS	An optional setting	Enter the IP address of Primary DNS server.
Secondary DNS	An optional setting	Enter the IP address of Secondary DNS server.
Service Name	An optional setting	Enter the service name if your ISP requires it
Assigned IP Address	An optional setting	Enter the IP address assigned by your Service Provider.

# 4G PoE IIoT Gateway

## WAN Type= PPTP

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	PPTP ▼

When you select it, "PPTP WAN Type Configuration" will appear. Items and setting is explained below

PPTP WAN Type Configuration	
Item	Setting

L2TP WAN Type Configuration		
Item	Value setting	Description
IP Mode	A Must filled setting	<p>Select either Static or Dynamic IP address for L2TP Internet connection.</p> <ul style="list-style-type: none"><li>When <b>Static IP Address</b> is selected, you will need to enter the <b>WAN IP Address</b>, <b>WAN Subnet Mask</b>, and <b>WAN Gateway</b>.<ul style="list-style-type: none"><li><b>WAN IP Address</b> (A Must filled setting): Enter the WAN IP address given by your Service Provider.</li><li><b>WAN Subnet Mask</b> (A Must filled setting): Enter the WAN subnet mask given by your Service Provider.</li><li><b>WAN Gateway</b> (A Must filled setting): Enter the WAN gateway IP address given by your Service Provider.</li></ul></li><li>When <b>Dynamic IP</b> is selected, there are no above settings required.</li></ul>
Server IP Address/Name	A Must filled setting	Enter the L2TP server name or IP Address.
L2TP Account	A Must filled setting	Enter the L2TP username provided by your Service Provider.
L2TP Password	A Must filled setting	Enter the L2TP connection password provided by your Service Provider.
Service Port	A Must filled setting	<p>Enter the service port that the Internet service.</p> <p>There are three options can be selected :</p> <ul style="list-style-type: none"><li><b>Auto</b>: Port will be automatically assigned.</li><li><b>1701 (For Cisco)</b>: Set service port to port 1701 to connect to CISCO server.</li><li><b>User-defined</b>: enter a service port provided by your Service Provider.</li></ul>
MPPE	An optional setting	Select <b>Enable</b> to enable MPPE (Microsoft Point-to-Point Encryption) security for PPTP connection.

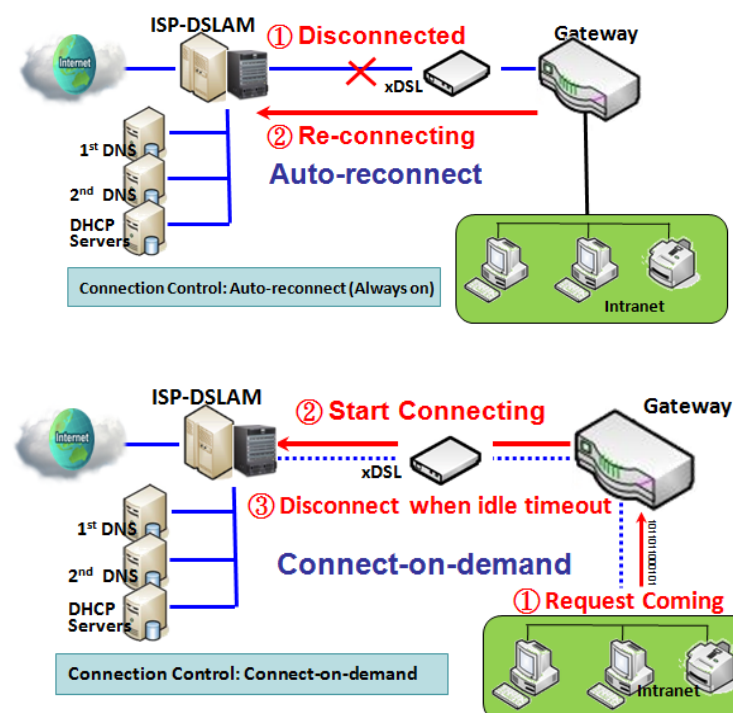

# 4G PoE IIoT Gateway

## Ethernet Connection Common Configuration

There are some important parameters to be setup no matter which Ethernet WAN type is selected. You should follow up the rule to configure.

## Connection Control.

**Auto-reconnect:** This gateway will establish Internet connection automatically once it has been booted up, and try to reconnect once the connection is down. It's recommended to choose this scheme if for mission critical applications to ensure full-time Internet connection.

**Connect-on-demand:** This gateway won't start to establish Internet connection until local data is going to be sent to WAN side. After normal data transferring between LAN and WAN sides, this gateway will disconnect WAN connection if idle time reaches value of Maximum Idle Time.

# 4G PoE IIoT Gateway

**Manually:** This gateway won't start to establish WAN connection until you press "Connect" button on web UI. After normal data transferring between LAN and WAN sides, this gateway will disconnect WAN connection if idle time reaches value of Maximum Idle Time.

Please be noted, if the WAN interface serves as the primary one for another WAN interface in Failover role, the Connection Control parameter will not be available to you to configure as the system must set it to "Auto-reconnect (Always on)".

## Network Monitoring

It is necessary to monitor connection status continuous. To do it, "ICMP Check" and "FQDN Query" are used to check. When there is traffic of connection, checking packet will waste bandwidth. Response time of replied packets may also increase. To avoid "Network Monitoring" work abnormally, enabling "Checking Loading" option will stop connection check when there is traffic. It will wait for another "Check Interval" and then check loading again.

When you do "Network Monitoring", if reply time longer than "Latency" or even no response longer than "Checking Timeout", "Fail" count will be increased. If it is continuous and "Fail" count is more than "Fail Threshold", gateway will do exception handling process and re-initial this connection again. Otherwise, network monitoring process will be start again.

# 4G PoE IIoT Gateway

## Set up “Ethernet Common Configuration”

Ethernet WAN Common Configuration		
Item	Value setting	Description
Connection Control	A Must filled setting	<p>There are three connection modes.</p> <ul style="list-style-type: none"> <li><b>Auto-reconnect</b> enables the router to always keep the Internet connection on.</li> <li><b>Connect-on-demand</b> enables the router to automatically re-establish Internet connection as soon as user attempts to access the Internet. Internet connection will be disconnected when it has been inactive for a specified idle time.</li> <li><b>Connect Manually</b> allows user to connect to Internet manually. Internet connection will be inactive after it has been inactive for specified idle time.</li> </ul>
Maximum Idle Time	<ol style="list-style-type: none"> <li>An Optional setting</li> <li>By default <b>600</b> seconds is filled-in</li> </ol>	<p>Specify the maximum Idle time setting to disconnect the internet connection when the connection idle timed out.</p> <p><b>Value Range:</b> 300 ~ 86400.</p> <p><b>Note:</b> This field is available only when <b>Connect-on-demand</b> or <b>Connect Manually</b> is selected as the connection control scheme.</p>
MTU Setup	<ol style="list-style-type: none"> <li>An Optional setting</li> <li><b>Uncheck</b> by default</li> </ol>	<p>Check the Enable box to enable the MTU (Maximum Transmission Unit) limit, and specify the <b>MTU</b> for the 3G/4G connection.</p> <p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p><b>Value Range:</b> 1200 ~ 1500.</p>
MTU Setup	<ol style="list-style-type: none"> <li>A Must filled setting</li> <li><b>Auto</b> (value zero) is set by default</li> <li>Manual set range 1200~1500</li> </ol>	<p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p>When set to <b>Auto</b> (value '0'), the router selects the best MTU for best Internet connection performance.</p>
NAT	<ol style="list-style-type: none"> <li>An optional setting</li> <li>NAT is enabled by default</li> </ol>	<p>Enable NAT to apply NAT on the WAN connection. Uncheck the box to disable NAT function.</p>
IGMP	<ol style="list-style-type: none"> <li>A Must filled setting</li> <li>Disable is set by default</li> </ol>	<p>Enable IGMP (Internet Group Management Protocol) would enable the router to listen to IGMP packets to discover which interfaces are connected to which device. The router uses the interface information generated by IGMP to reduce bandwidth consumption in a multi-access network environment to avoid flooding the entire network.</p>
WAN IP Alias	<ol style="list-style-type: none"> <li>An optional setting</li> <li><b>Uncheck</b> by default</li> </ol>	<p>Enable <b>WAN IP Alias</b> then enter the IP address provided by your service provider.</p> <p><b>WAN IP Alias</b> is used by the device router and is treated as a second set of WAN IP to provide dual WAN IP address to your LAN network.</p>

# 4G PoE IIoT Gateway

**Network Monitoring Configuration**

Item	Setting
▶ Network Monitoring Configuration	<input checked="" type="checkbox"/> Enable
▶ Checking Method	DNS Query ▼
▶ Loading Check	<input checked="" type="checkbox"/> Enable
▶ Query Interval	5 (seconds)
▶ Latency Threshold	3000 (ms)
▶ Fail Threshold	5 (Times)
▶ Target1	DNS1 ▼
▶ Target2	None ▼

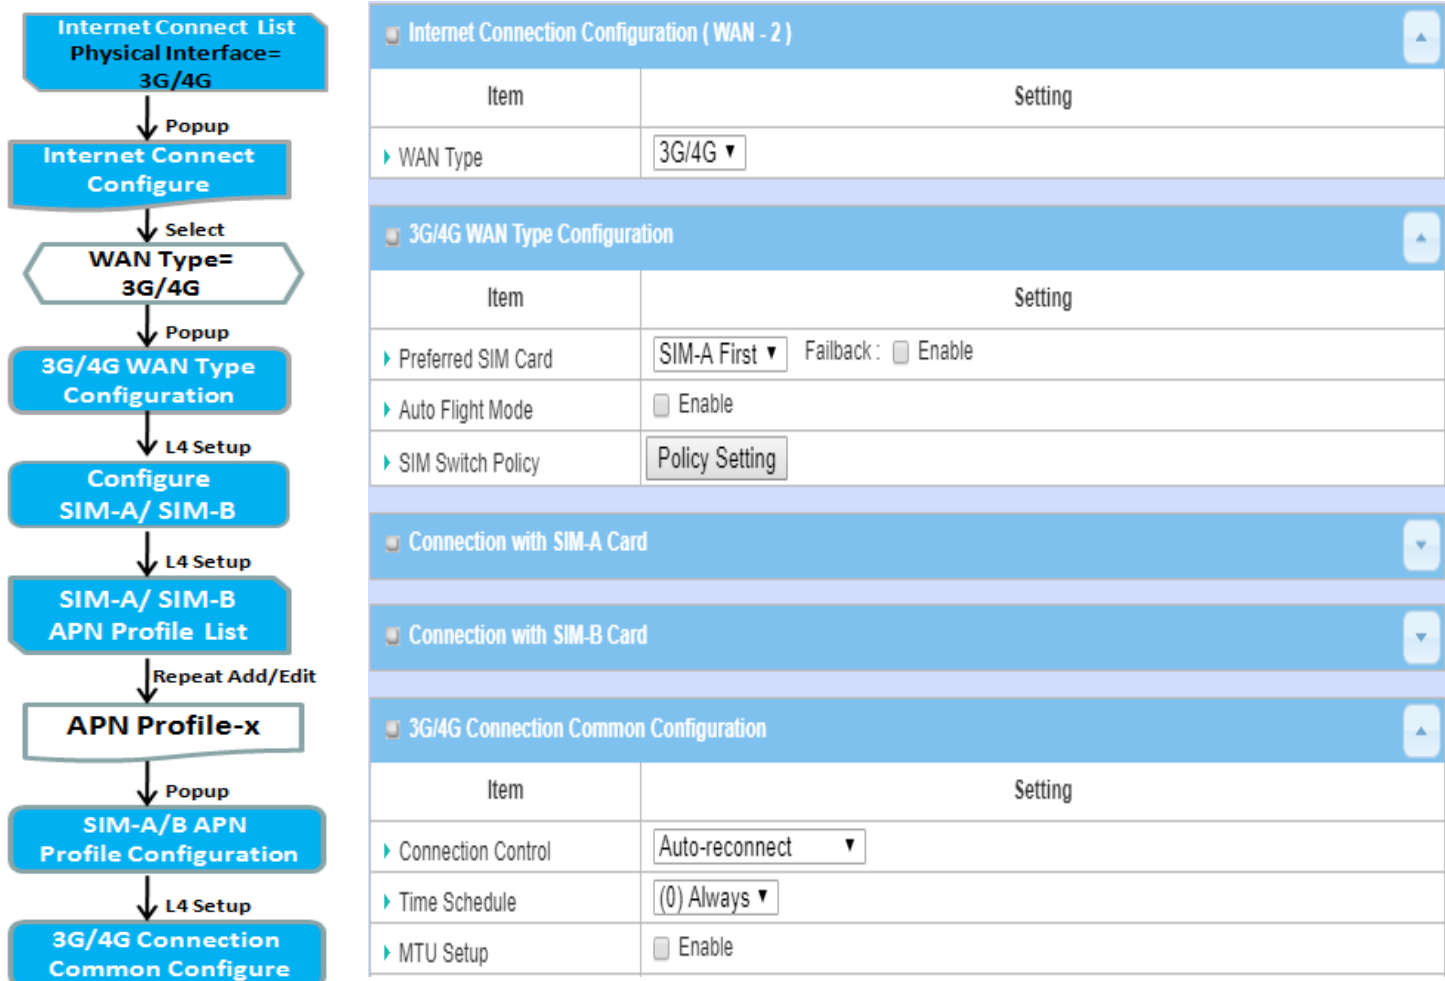

Network Monitoring Configuration		
Item	Value setting	Description
<b>Network Monitoring Configuration</b>	1. An optional setting 2. Box is checked by default	Check the <b>Enable</b> box to activate the network monitoring function.
<b>Checking Method</b>	1. An Optional setting 2. <b>DNS Query</b> is set by default	Choose either <b>DNS Query</b> or <b>ICMP Checking</b> to detect WAN link. With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in Target 1 and Target 2. With <b>ICMP Checking</b> , the system will check connection by sending ICMP request packets to the destination specified in Target 1 and Target 2.
<b>Loading Check</b>	1. An optional setting 2. Box is checked by default	Check the <b>Enable</b> box to activate the loading check function. Enable Loading Check allows the gateway to ignore unreturned DNS queries or ICMP requests when WAN bandwidth is fully occupied. This is to prevent false link-down status.
<b>Query Interval</b>	1. An Optional setting 2. <b>5 seconds</b> is selected by default.	Specify a time interval as the <b>DNS Query Interval</b> . <b>Query Interval</b> defines the transmitting interval between two DNS Query or ICMP checking packets. With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in Target 1 and Target 2. <b>Value Range:</b> 2 ~ 14400.
<b>Check Interval</b>	1. An Optional setting 2. <b>5 seconds</b> is selected by default.	Specify a time interval as the <b>ICMP Checking Interval</b> . <b>Query Interval</b> defines the transmitting interval between two DNS Query or ICMP checking packets. With <b>ICMP Checking</b> , the system will check connection by sending ICMP request packets to the destination specified in Target 1 and Target 2. <b>Value Range:</b> 2 ~ 14400.
<b>Latency Threshold</b>	1. An Optional setting 2. <b>3000 ms</b> is set by default	Enter a number of detecting disconnection times to be the threshold before disconnection is acknowledged. <b>Latency Threshold</b> defines the tolerance threshold of responding time. <b>Value Range:</b> 2000 ~ 3000 seconds.
<b>Fail Threshold</b>	1. An Optional setting 2. <b>5 times</b> is set by default	Enter a number of detecting disconnection times to be the threshold before disconnection is acknowledged. <b>Fail Threshold</b> specifies the detected disconnection before the router recognize the WAN link down status.

## 4G PoE IIoT Gateway

		<b><u>Value Range:</u></b> 1 ~ 10 times.
<b>Target 1</b>	1. An Optional filled setting 2. <b>DNS1</b> is selected by default	<b>Target1</b> specifies the first target of sending DNS query/ICMP request. <b>DNS1:</b> set the primary DNS to be the target. <b>DNS2:</b> set the secondary DNS to be the target. <b>Gateway:</b> set the Current gateway to be the target. <b>Other Host:</b> enter an IP address to be the target.
<b>Target 2</b>	1. An Optional filled setting 2. <b>None</b> is selected by default	<b>Target1</b> specifies the second target of sending DNS query/ICMP request. <b>None:</b> no second target is required. <b>DNS1:</b> set the primary DNS to be the target. <b>DNS2:</b> set the secondary DNS to be the target. <b>Gateway:</b> set the Current gateway to be the target. <b>Other Host:</b> enter an IP address to be the target.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings.

# 4G PoE IIoT Gateway

## Internet Connection – 3G/4G WAN

### Preferred SIM Card – Dual SIM Fail Over

For 3G/4G embedded device, one embedded cellular module can create only one WAN interface. This device has featured by using dual SIM cards for one module with special fail-over mechanism. It is called Dual SIM Failover. This feature is useful for ISP switch over when location is changed. Within “Dual SIM Failover”, there are various usage scenarios, including “SIM-A First”, “SIM-B First” with “Failback” enabled or not, and “SIM-A Only” and “SIM-B Only”.

# 4G PoE IIoT Gateway

**SIM-A/SIM-B only:** When “SIM-A Only” or “SIM-B Only” is used, the specified SIM slot card is the only one to be used for negotiation parameters between gateway device and cellular ISP.

## SIM-A / SIM-B first without enable Failback

By default, “SIM-A First” scenario is used to connect to cellular ISP for data transfer. In the case of “SIM-A First” or “SIM-B First” scenario, the gateway will try to connect to the Internet by using SIM-A or SIM-B card first. And when the connection is broken, the gateway will switch to use the other SIM card for an alternate automatically and **will not switch back** to use original SIM card except current SIM connection is also broken. That is, SIM-A and SIM-B are used iteratively, but either one will keep being used for data transfer when current connection is still alive.

## SIM-A / SIM-B first with Failback enable

With Failback option enabled, “SIM-A First” scenario is used to connect when the connection is broken, gateway system will switch to use SIM-B. And when SIM-A connection is recovered, it will switch back to use original SIM-A card

# 4G PoE IIoT Gateway

## Configure 3G/4G WAN Setting

When **Edit** button is applied, **Internet Connection Configuration**, and **3G/4G WAN Configuration** screens will appear.

Internet Connection Configuration ( WAN - 2 )	
Item	Setting
▶ WAN Type	3G/4G ▼

3G/4G WAN Type Configuration	
Item	Setting
▶ Preferred SIM Card	SIM-A First ▼ Failback : <input type="checkbox"/> Enable
▶ Auto Flight Mode	<input type="checkbox"/> Enable
▶ SIM Switch Policy	Policy Setting

3G/4G Connection Configuration		
Item	Value setting	Description
WAN Type	1. A Must filled setting 2. <b>3G/4G</b> is set by default.	From the dropdown box, select Internet connection method for 3G/4G WAN Connection. Only <b>3G/4G</b> is available.
Preferred SIM Card	1. A Must filled setting 2. By default <b>SIM-A First</b> is selected 3. <b>Failback</b> is unchecked by default	<p>Choose which SIM card you want to use for the connection.</p> <p>When <b>SIM-A First</b> or <b>SIM-B First</b> is selected, it means the connection is built first by using SIM A/SIM B. And if the connection is failed, it will change to the other SIM card and try to dial again, until the connection is up.</p> <p>When <b>SIM-A only</b> or <b>SIM-B only</b> is selected, it will try to dial up only using the SIM card you selected.</p> <p>When <b>Failback</b> is checked, it means if the connection is dialed-up not using the main SIM you selected, it will failback to the main SIM and try to establish the connection periodically.</p> <p><b>Note_1:</b> For the product with single SIM design, only <b>SIM-A Only</b> option is available.</p> <p><b>Note_2:</b> <b>Failback</b> is available only when <b>SIM-A First</b> or <b>SIM-B First</b> is selected.</p>
Auto Flight Mode	The box is unchecked by default	<p>Check the <b>Enable</b> box to activate the function.</p> <p>By default, if you disabled the <b>Auto Flight Mode</b>, the cellular module will always occupy a physical channel with cellular tower. It can get data connection instantly, and receive managing SMS all the time on required.</p> <p>If you enabled the <b>Auto Flight Mode</b>, the gateway will pop up a message <i>"Flight mode will cause cellular function to be malfunctioned when the data session is offline."</i>, and it will make the cellular module into flight mode and disconnected with cellular tower phycially. In, addition, whenever the cellular module is going to be used for data connection to backup the failed primary connection, the cellular module will be active to connect with cellular tower and get the data connection for use, It takes few more seconds.</p>

# 4G PoE IIoT Gateway

		<b>Note:</b> Keep it unchecked unless your cellular ISP asked the connected gateway to enable the Auto Flight Mode.
<b>SIM Switch Policy</b>	NA	Click the <b>Policy Setting</b> button to define the SIM Switch policy or browse the current policy settings.

Policy Setting	
Item	Setting
▶ Failed connection	<input type="text" value="0"/> (1-10) times
▶ RSSI Monitor	<input type="checkbox"/> Enable Threshold: - <input type="text" value="0"/> (-90~-113 dBm)
▶ Network Service	<input type="checkbox"/> Enable Loss LTE signal: <input type="text" value="0"/> (1~30 minutes)
▶ Roaming Service	<input type="checkbox"/> Enable Timeout: <input type="text" value="0"/> (1~30 minutes)

## Configure SIM-A / SIM-B Card

Here you can set configurations for the cellular connection according to your situation or requirement.

Connection with SIM-A Card	
Item	Setting
▶ Network Type	<input type="text" value="Auto"/>
▶ Dial-Up Profile	<input type="text" value="Manual-configuration"/>
▶ APN	<input type="text"/>
▶ PIN Code	<input type="text"/> (Optional)
▶ Dial Number	<input type="text"/> (Optional)
▶ Account	<input type="text"/> (Optional)
▶ Password	<input type="text"/> (Optional)
▶ Authentication	<input type="text" value="Auto"/>
▶ IP Mode	<input type="text" value="Dynamic IP"/>
▶ Primary DNS	<input type="text"/> (Optional)
▶ Secondary DNS	<input type="text"/> (Optional)
▶ Roaming	<input type="checkbox"/> Enable

Note\_1: Configurations of SIM-B Card follows the same rule of Configurations of SIM-A Card, here we list SIM-A as the example.

Note\_2: Both **Connection with SIM-A Card** and **Connection with SIM-B Card** will pop up only when the **SIM-A First** or **SIM-B First** is selected, otherwise it only pops out one of them.

# 4G PoE IIoT Gateway

Connection with SIM-A/-B Card		
Item	Value setting	Description
Network Type	1. A Must filled setting 2. By default <b>Auto</b> is selected	<p>Select <b>Auto</b> to register a network automatically, regardless of the network type.</p> <p>Select <b>2G Only</b> to register the 2G network only.</p> <p>Select <b>2G Prefer</b> to register the 2G network first if it is available.</p> <p>Select <b>3G only</b> to register the 3G network only.</p> <p>Select <b>3G Prefer</b> to register the 3G network first if it is available.</p> <p>Select <b>LTE only</b> to register the LTE network only.</p> <p><b>Note:</b> Options may be different due to the specification of the module.</p>
Dial-Up Profile	1. A Must filled setting 2. By default <b>Manual-configuration</b> is selected	<p>Specify the type of dial-up profile for your 3G/4G network. It can be <b>Manual-configuration</b>, <b>APN Profile List</b>, or <b>Auto-detection</b>.</p> <p>Select <b>Manual-configuration</b> to set <b>APN</b> (Access Point Name), <b>Dial Number</b>, <b>Account</b>, and <b>Password</b> to what your carrier provides.</p> <p>Select <b>APN Profile List</b> to set more than one profile to dial up in turn, until the connection is established. It will pop up a new filed, please go to <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup &gt; SIM-A APN Profile List</b> for details.</p> <p>Select <b>Auto-detection</b> to automatically bring out all configurations needed while dialing-up, by comparing the IMSI of the SIM card to the record listed in the manufacturer's database.</p> <p><b>Note_1:</b> You are highly recommended to select the <b>Manual</b> or <b>APN Profile List</b> to specify the network for your subscription. Your ISP always provides such network settings for the subscribers.</p> <p><b>Note_2:</b> If you select <b>Auto-detection</b>, it is likely to connect to improper network, or failed to find a valid APN for your ISP.</p>
APN	1. A Must filled setting 2. String format : any text	<p>Enter the <b>APN</b> you want to use to establish the connection.</p> <p>This is a must-filled setting if you selected <b>Manual-configuration</b> as dial-up profile scheme.</p>
IP Type	1. A Must filled setting 2. By default <b>IPv4</b> is selected	Specify the IP type of the network service provided by your 3G/4G network. It can be <b>IPv4</b> , <b>IPv6</b> , or <b>IPv4/6</b> .
PIN code	1. An Optional setting 2. String format : interger	Enter the PIN (Personal Identification Number) code if it needs to unlock your SIM card.
Dial Number, Account, Password	1. An Optional setting 2. String format : any text	<p>Enter the optional <b>Dial Number</b>, <b>Account</b>, and <b>Password</b> settings if your ISP provided such settings to you.</p> <p>Note: These settings are only displayed when Manual-configuration is selected.</p>
Authentication	1. A Must filled setting 2. By default <b>Auto</b> is selected	<p>Select <b>PAP</b> (Password Authentication Protocol) and use such protocol to be authenticated with the carrier's server.</p> <p>Select <b>CHAP</b> (Challenge Handshake Authentication Protocol) and use such protocol to be authenticated with the carrier's server.</p> <p>When <b>Auto</b> is selected, it means it will authenticate with the server either <b>PAP</b> or <b>CHAP</b>.</p>
IP Mode	1. A Must filled setting 2. By default <b>Dynamic IP</b> is selected	<p>When <b>Dynamic IP</b> is selected, it means it will get all IP configurations from the carrier's server and set to the device directly.</p> <p>If you have specific application provided by the carrier, and want to set IP</p>

# 4G PoE IIoT Gateway

		configurations on your own, you can switch to <b>Static IP</b> mode and fill in all parameters that required, such as IP address, subnet mask and gateway.
		<b>Note:</b> <b>IP Subnet Mask</b> is a must filled setting, and make sure you have the right configuration. Otherwise, the connection may get issues.
<b>Primary DNS</b>	1. An Optional setting 2. String format : IP address (IPv4 type)	Enter the IP address to change the primary DNS (Domain Name Server) setting. If it is not filled-in, the server address is given by the carrier while dialing-up.
<b>Secondary DNS</b>	1. An Optional setting 2. String format : IP address (IPv4 type)	Enter the IP address to change the secondary DNS (Domain Name Server) setting. If it is not filled-in, the server address is given by the carrier while dialing-up.
<b>Roaming</b>	The box is unchecked by default	Check the box to establish the connection even the registration status is roaming, not in home network.  <b>Note:</b> It may cost additional charges if the connection is under roaming.

## Create/Edit SIM-A / SIM-B APN Profile List

You can add a new APN profile for the connection, or modify the content of the APN profile you added. It is available only when you select **Dial-Up Profile** as **APN Profile List**.

SIM-A APN Profile List <span>Add</span> <span>Delete</span>									
ID	Profile Name	APN	IP Type	Account	Password	Authentication	Priority	Enable	Actions

List all the APN profile you created, easily for you to check and modify. It is available only when you select **Dial-Up Profile** as **APN Profile List**.

When **Add** button is applied, an **APN Profile Configuration** screen will appear.

SIM-A APN Profile Configuration	
Item	Setting
▶ Profile Name	<input type="text" value="Profile-1"/>

SIM-A/-B APN Profile Configuration		
Item	Value setting	Description
<b>Profile Name</b>	1. By default <b>Profile-x</b> is	Enter the profile name you want to describe for this profile.

# 4G PoE IIoT Gateway

	listed 2. String format : any text	
<b>APN</b>	String format : any text	Enter the <b>APN</b> you want to use to establish the connection.
<b>IP Type</b>	1. A Must filled setting 2. By default <b>IPv4</b> is selected	Specify the IP type of the network service provided by your 3G/4G network. It can be <b>IPv4</b> , <b>IPv6</b> , or <b>IPv4/6</b> .
<b>Account</b>	String format : any text	Enter the <b>Account</b> you want to use for the authentication. <i>Value Range: 0 ~ 53 characters.</i>
<b>Password</b>	String format : any text	Enter the <b>Password</b> you want to use for the authentication.
<b>Authentication</b>	1. A Must filled setting 2. By default <b>Auto</b> is selected	Select the Authentication method for the 3G/4G connection. It can be <b>Auto</b> , <b>PAP</b> , <b>CHAP</b> , or <b>None</b> .
<b>Priority</b>	1. A Must filled setting 2. String format : integer	Enter the value for the dialing-up order. The valid value is from 1 to 16. It will start to dial up with the profile that assigned with the smallest number. <i>Value Range: 1 ~ 16.</i>
<b>Profile</b>	The box is checked by default	Check the box to enable this profile. Uncheck the box to disable this profile in dialing-up action.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Undo</b>	N/A	Click the <b>X</b> button to restore what you just configured back to the previous setting.

## Setup 3G/4G Connection Common Configuration

Here you can change common configurations for 3G/4G WAN.

3G/4G Connection Common Configuration

Item	Setting
▶ Connection Control	Auto-reconnect ▼
▶ Time Schedule	(0) Always ▼
▶ MTU Setup	<input type="checkbox"/> Enable
▶ IP Passthrough (Cellular Bridge)	<input type="checkbox"/> Enable Fixed MAC : <input type="text"/>
▶ NAT	<input checked="" type="checkbox"/> Enable
▶ IGMP	Disable ▼
▶ WAN IP Alias	<input type="checkbox"/> Enable <input type="text" value="10.0.0.1"/>

3G/4G Connection Common Configuration		
Item	Value setting	Description
<b>Connection Control</b>	By default <b>Auto-reconnect</b> is selected	When <b>Auto-reconnect</b> is selected, it means it will try to keep the Internet connection on all the time whenever the physical link is connected. When <b>Connect-on-demand</b> is selected, it means the Internet connection will be established only when detecting data traffic. When <b>Connect Manually</b> is selected, it means you need to click the <b>Connect</b> button to dial up the connection manually. Please go to <b>Status &gt;</b>

# 4G PoE IIoT Gateway

		<p><b>Basic Network &gt; WAN &amp; Uplink</b> tab for details.</p> <p><b>Note:</b> If the WAN interface serves as the primary one for another WAN interface in Failover role( and vice versa), the Connection Control parameter will not be available on both WANs as the system must set it to "Auto-reconnect"</p>
<b>Maximum Idle Time</b>	1. An Optional setting 2. By default <b>600</b> seconds is filled-in	<p>Specify the maximum Idle time setting to disconnect the internet connection when the connection idle timed out.</p> <p><b>Value Range:</b> 300 ~ 86400.</p> <p><b>Note:</b> This field is available only when <b>Connect-on-demand</b> or <b>Connect Manually</b> is selected as the connection control scheme.</p>
<b>Time Schedule</b>	1. A Must filled setting 2. By default <b>(0) Always</b> is selected	<p>When <b>(0) Always</b> is selected, it means this WAN is under operation all the time. Once you have set other schedule rules, there will be other options to select. Please go to <b>Object Definition &gt; Scheduling</b> for details.</p>
<b>MTU Setup</b>	1. An Optional setting 2. <b>Uncheck</b> by default	<p>Check the Enable box to enable the MTU (Maximum Transmission Unit) limit, and specify the <b>MTU</b> for the 3G/4G connection.</p> <p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p><b>Value Range:</b> 1200 ~ 1500.</p>
<b>IP Pass-through (Cellular Bridge)</b>	1. The box is unchecked by default 2. String format for <b>Fixed MAC</b> : MAC address, e.g. 00:50:18:aa:bb:cc	<p>When <b>Enable</b> box is checked, it means the device will directly assign the WAN IP to the first connected local LAN client.</p> <p>However, when an optional <b>Fixed MAC</b> is filled-in a non-zero value, it means only the client with this MAC address can get the WAN IP address.</p> <p><b>Note:</b> When the <b>IP Pass-through</b> is on, <b>NAT</b> and <b>WAN IP Alias</b> will be unavailable until the function is disabled again.</p>
<b>NAT</b>	<b>Check</b> by default	Uncheck the box to disable <b>NAT</b> (Network Address Translation) function.
<b>IGMP</b>	By default <b>Disable</b> is selected	Select <b>Auto</b> to enable <b>IGMP</b> function. Check the <b>Enable</b> box to enable <b>IGMP Proxy</b> .
<b>WAN IP Alias</b>	1. Unchecked by default 2. String format: IP address (IPv4 type)	Check the box to enable <b>WAN IP Alias</b> , and fill in the IP address you want to assign.

Network Monitoring Configuration	
Item	Setting
▶ Network Monitoring Configuration	<input checked="" type="checkbox"/> Enable
▶ Checking Method	DNS Query ▼
▶ Loading Check	<input checked="" type="checkbox"/> Enable
▶ Query Interval	5 (seconds)
▶ Latency Threshold	3000 (ms)
▶ Fail Threshold	5 (Times)
▶ Target1	DNS1 ▼
▶ Target2	None ▼

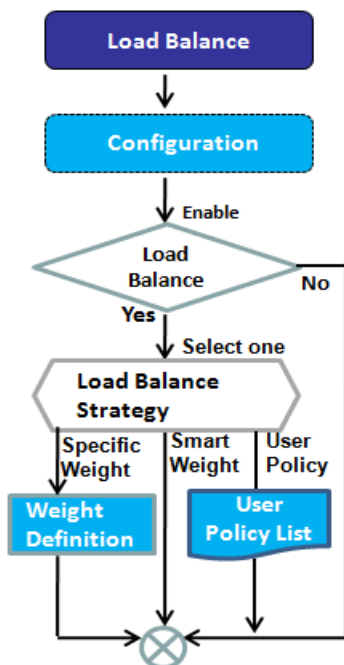

## 4G PoE IIoT Gateway

Network Monitoring Configuration		
Item	Value setting	Description
<b>Network Monitoring Configuration</b>	1. An optional setting 2. Box is checked by default	Check the <b>Enable</b> box to activate the network monitoring function.
<b>Checking Method</b>	1. An Optional setting 2. <b>DNS Query</b> is set by default	Choose either <b>DNS Query</b> or <b>ICMP Checking</b> to detect WAN link. With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in Target 1 and Target 2. With <b>ICMP Checking</b> , the system will check connection by sending ICMP request packets to the destination specified in Target 1 and Target 2.
<b>Loading Check</b>	1. An optional setting 2. Box is checked by default	Check the <b>Enable</b> box to activate the loading check function. Enable Loading Check allows the gateway to ignore unreturned DNS queries or ICMP requests when WAN bandwidth is fully occupied. This is to prevent false link-down status.
<b>Query Interval</b>	1. An Optional setting 2. <b>5 seconds</b> is selected by default.	Specify a time interval as the <b>DNS Query Interval</b> . <b>Query Interval</b> defines the transmitting interval between two DNS Query or ICMP checking packets. With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in Target 1 and Target 2. <b>Value Range:</b> 2 ~ 14400.
<b>Check Interval</b>	1. An Optional setting 2. <b>5 seconds</b> is selected by default.	Specify a time interval as the <b>ICMP Checking Interval</b> . <b>Query Interval</b> defines the transmitting interval between two DNS Query or ICMP checking packets. With <b>ICMP Checking</b> , the system will check connection by sending ICMP request packets to the destination specified in Target 1 and Target 2. <b>Value Range:</b> 2 ~ 14400.
<b>Latency Threshold</b>	1. An Optional setting 2. <b>3000 ms</b> is set by default	Enter a number of detecting disconnection times to be the threshold before disconnection is acknowledged. <b>Latency Threshold</b> defines the tolerance threshold of responding time. <b>Value Range:</b> 2000 ~ 3000 seconds.
<b>Fail Threshold</b>	1. An Optional setting 2. <b>5 times</b> is set by default	Enter a number of detecting disconnection times to be the threshold before disconnection is acknowledged. <b>Fail Threshold</b> specifies the detected disconnection before the router recognize the WAN link down status. <b>Value Range:</b> 1 ~ 10 times.
<b>Target 1</b>	1. An Optional filled setting 2. <b>DNS1</b> is selected by default	<b>Target1</b> specifies the first target of sending DNS query/ICMP request. <b>DNS1:</b> set the primary DNS to be the target. <b>DNS2:</b> set the secondary DNS to be the target. <b>Gateway:</b> set the Current gateway to be the target. <b>Other Host:</b> enter an IP address to be the target.
<b>Target 2</b>	1. An Optional filled setting 2. <b>None</b> is selected by default	<b>Target1</b> specifies the second target of sending DNS query/ICMP request. <b>None:</b> no second target is required. <b>DNS1:</b> set the primary DNS to be the target. <b>DNS2:</b> set the secondary DNS to be the target. <b>Gateway:</b> set the Current gateway to be the target. <b>Other Host:</b> enter an IP address to be the target.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings.

## 2.1.3 Load Balance

The screenshot shows the 'Configuration' page for Load Balance. It includes a table for 'Weight Definition' with columns for WAN ID, Weight, and Action. Below it is a 'User Policy List' table with columns for ID, Source IP Address, Destination IP Address, Destination Port, WAN Interface, Enable, and Actions. The 'User Policy Configuration' section is also visible.

Item	Setting
Load Balance	<input checked="" type="checkbox"/> Enable
Load Balance Strategy	By Specific Weight ▼
Weight Definition	

WAN ID	Weight	Action
WAN - 1	86 %	Edit
WAN - 2	13 %	Edit

ID	Source IP Address	Destination IP Address	Destination Port	WAN Interface	Enable	Actions
----	-------------------	------------------------	------------------	---------------	--------	---------

When there are multiple WAN interfaces, and when the bandwidth of one WAN connection is not enough for the traffic loads from the Intranet to the Internet, the WAN load balance function can be considered to enlarge the total WAN bandwidth.

### Load Balance Strategy

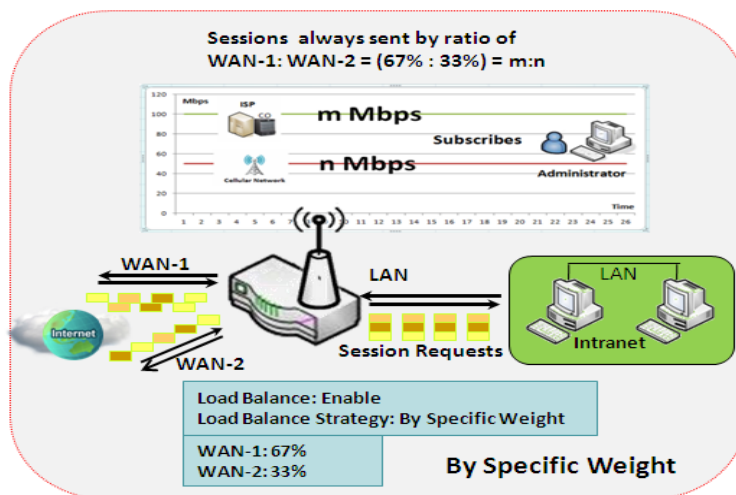

There are three optional strategies for load balance: **“By Smart Weight”**, **“By Specific Weight”**, and **“By User Policy”**. Administrator can select strategy according to application requirement and environment status. The strategies are explained as below.

### **By Smart Weight**

If based on "By Smart Weight" strategy, gateway will take the line speed settings of all WAN interfaces specified in "Physical Interface" configuration page as default ratio for data transfer. Based on the ratio of packet bytes via these WAN interfaces in past period (maybe 5 minutes), system decides how many sessions will be transferred via each WAN interface for next period. Administrator may take it as a fast approach to maximize the bandwidth utilization of multiple WAN interfaces in gateway

# 4G PoE IIoT Gateway

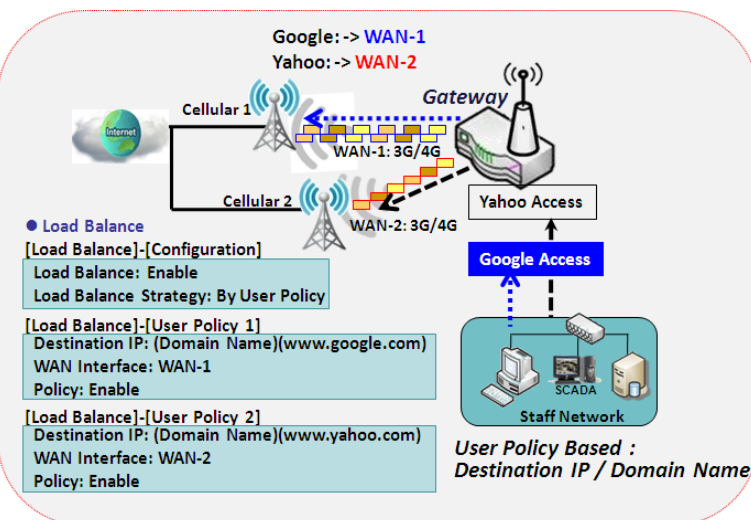

## By Specific Weight

When you select "By Specific Weight", you need to set up ratio of WAN-1/WAN-2 to decide sessions sent ratio. Total ratio should be 100%. Ratio is usually defined based on practical WAN speed of environment. Gateway's traffic control process will operate routing adequately based on the dedicated weights ratio on all WAN interfaces.

## By User Policy

If "By User Policy" load balance strategy is selected, it can allow you to mapping Source IP, Destination IP, or Destination Port to assigned WAN interface. This IP address is not only a single IP but also a subnet or IP range. Destination port can be a single port or port range. You can select one target for one mapping to setup IP address and leave others just left as "any"/ "All". Besides this, you can also set protocol as TCP, UDP or both.

Diagrams shown on left side are examples user policy. The first diagram illustrates example for mapping various source IP subnets to different WAN interface. All packets from different subnet will be routed to the assigned WAN interface. Administrator can manage and balance the loading among available WAN interfaces accordingly.

The second diagram illustrates another example for routing packets with designated destination IP or domain name to a certain WAN interface. If packets no belong to user policy rule, the gateway just routes those packets based on smart weight algorithm.

# 4G PoE IIoT Gateway

## Load Balance Setting

Go to **Basic Network > WAN & Uplink > Load Balance** Tab.

The **Load Balance** function is used to manage balance bandwidth usage among multiple WAN connections. When you choose "By Smart Weight" strategy, system will operate load balance function automatically based on the embedded Smart Weight algorithm. However, when you choose "By Specific Weight" strategy, the further "Weight Definition" configuration window will let you define the ratio of transferred sessions between all WAN interfaces for data transfer. At last, when you choose "By User Policy" strategy, the further "User Policy List" shows all defined user policy entries, and the "User Policy Configuration" window will let you create and define one user policy for routing dedicated packet flow via one WAN interface.

### Enable/Select Load Balance Strategy

Configuration	
Item	Setting
▶ Load Balance	<input type="checkbox"/> Enable
▶ Load Balance Strategy	By Specific Weight ▼

Configuration		
Item	Value setting	Description
<b>Load Balance</b>	Unchecked by default	Check the <b>Enable</b> box to activate Load Balance function.
<b>Load Balance Strategy</b>	1. A Must filled setting 2. <b>By Smart Weight</b> is selected by default.	There are up to three load balance strategies. Select the preferred one. <b>By Smart Weight:</b> System will operate load balance function automatically based on the embedded Smart Weight algorithm. <b>By Specific Weight:</b> System will adjust the ratio of transferred sessions among all WANs based on the specified weights for each WAN. <b>By User Policy:</b> System will route traffics through available WAN interface based on user defined rules. Note: The number of available strategies depends on the model you purchased.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration
<b>Undo</b>	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

When **By Specific Weight** is selected, user needs to adjust the percentage of WAN loading. System will give a value according to the bandwidth ratio of each WAN at first time and keep the value after clicking **Save** button.

# 4G PoE IIoT Gateway

Weight Definition			
WAN ID	Weight	Action	
WAN - 1	86 %	Edit	
WAN - 2	13 %	Edit	

Weight Definition		
Item	Value setting	Description
WAN ID	NA	The Identifier for each available WAN interface..
Weight	1. A Must filled setting 2. Set with bandwidth ratio of each WAN by default.	Enter the weight ratio for each WAN interface. Initially, the bandwidth ratio of each WAN is set by default. <b>Value Range: 1 ~ 99.</b>  Note: The sum of all weights can't be greater than 100%.
Save	NA	Click the <b>Save</b> button to save the configuration
Undo	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

When **By User Policy** is selected, a **User Policy List** screen will appear. With properly configured your policy rules, system will route traffics through available WAN interface based on user defined rules

## Create User Policy

<b>Undo</b>	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

# 4G PoE IIoT Gateway

## 2.2 LAN & VLAN

This section provides the configuration of LAN and VLAN. VLAN is an optional feature, and it depends on the product specification of the purchased gateway.

### 2.2.1 Ethernet LAN

The Local Area Network (LAN) can be used to share data or files among computers attached to a network. Following diagram illustrates the network that wired and interconnects computers.

Please follow the following instructions to do IPv4 Ethernet LAN Setup.

Configuration	
Item	Setting
IP Mode	Static IP
LAN IP Address	192.168.123.254
Subnet Mask	255.255.255.0 (/24)

Configuration Item	Value setting	Description
IP Mode	N/A	It shows the LAN IP mode for the gateway according the related configuration. <b>Static IP:</b> If there is at least one WAN interface activated, the LAN IP mode is fixed in Static IP mode. <b>Dynamic IP:</b> If all the available WAN interfaces are disabled, the LAN IP mode can be Dynamic IP mode.
LAN IP Address	1. A Must filled setting 2. 192.168.1.101 is set by default	Enter the local IP address of this device. The network device(s) on your network must use the LAN IP address of this device as their Default Gateway. You can change it if necessary. <b>Note:</b> It's also the IP address of web UI. If you change it, you need to type new IP address in the browser to see web UI.
Subnet Mask	1. A Must filled setting 2. 255.255.255.0 (/24) is set	Select the subnet mask for this gateway from the dropdown list. Subnet mask defines how many clients are allowed in one network or subnet.

# 4G PoE IIoT Gateway

	by default	The default subnet mask is 255.255.255.0 (/24), and it means maximum 254 IP addresses are allowed in this subnet. However, one of them is occupied by LAN IP address of this gateway, so there are maximum 253 clients allowed in LAN network. <b>Value Range:</b> 255.0.0.0 (/8) ~ 255.255.255.252 (/30).
Save	N/A	Click the <b>Save</b> button to save the configuration
Undo	N/A	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

## Create / Edit Additional IP

This gateway provides the LAN IP alias function for some special management consideration. You can add additional LAN IP for this gateway, and access to this gateway with the additional IP.

 Additional IP Add Delete ↑ ×

ID	Name	Interface	IP Address	Subnet Mask	Enable	Action
----	------	-----------	------------	-------------	--------	--------

When **Add** button is applied, **Additional IP Configuration** screen will appear.

 Additional IP Configuration ↑ ×

Item	Setting
▶ Name	<input type="text"/>
▶ Interface	lo ▼
▶ IP Address	<input type="text"/>
▶ Subnet Mask	255.255.255.0 (/24) ▼
▶ Enable	<input type="checkbox"/>
<span>Save</span>	

Configuration		
Item	Value setting	Description
Name	.1 An Optional Setting	Enter the name for the alias IP address.
Interface	1. A Must filled setting 2. lo is set by default	Specify the Interface type. It can be lo or br0.
IP Address	1. An Optional setting 2. 192.168.1.101 is set by default	Enter the addition IP address for this device.
Subnet Mask	1. A Must filled setting 2. 255.255.255.0 (/24) is set by default	Select the subnet mask for this gateway from the dropdown list. Subnet mask defines how many clients are allowed in one network or subnet. The default subnet mask is 255.255.255.0 (/24), and it means maximum 254 IP addresses are allowed in this subnet. However, one of them is occupied by LAN IP address of this gateway, so there are maximum 253 clients allowed in LAN

Save	NA	Click the <b>Save</b> button to save the configuration

# 4G PoE IIoT Gateway

## 2.2.2 VLAN

VLAN (Virtual LAN) is a logical network under a certain switch or router device to group client hosts with a specific VLAN ID. This gateway supports both Port-based VLAN and Tag-based VLAN. These functions allow you to divide local network into different “virtual LANs”. It is common requirement for some application scenario. For example, there are various departments within SMB. All client hosts in the same department should own common access privilege and QoS property. You can assign departments either by port-based VLAN or tag-based VLAN as a group, and then configure it by your plan. In some cases, ISP may need router to support “VLAN tag” for certain kinds of services (e.g. IPTV). You can group all devices required this service as one tag-based VLAN.

If the gateway has only one physical Ethernet LAN port, only very limited configuration is available if you enable the Port-based VLAN.

### ➤ Port-based VLAN

Port-based VLAN function can group Ethernet ports, Port-1 ~ Port-4, and WiFi Virtual Access Points, VAP-1 ~ VAP-8, together for differentiated services like Internet surfing, multimedia enjoyment, VoIP talking, and so on. Two operation modes, NAT and Bridge, can be applied to each VLAN group. One DHCP server can be allocated for a NAT VLAN group to let group host member get its IP address. Thus, each host can surf Internet via the NAT mechanism of business access gateway. In bridge mode, Intranet packet flow is delivered out WAN trunk port with VLAN tag to upper link for different services.

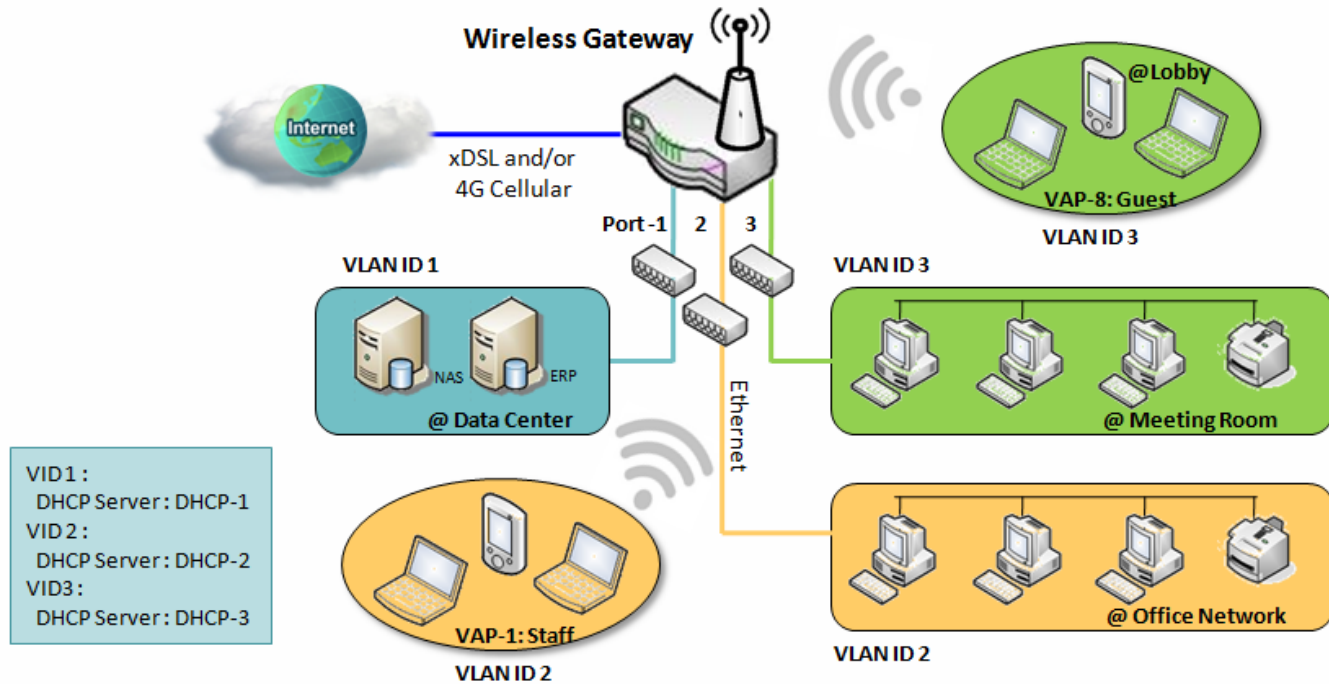

A port-based VLAN is a group of ports on an Ethernet or Virtual APs of Wired or Wireless Gateway that form a logical LAN segment. Following is an example.

For example, in a company, administrator schemes out 3 network segments, Lobby/Meeting Room, Office, and Data Center. In a Wireless Gateway, administrator can configure Lobby/Meeting Room segment with VLAN ID 3. The VLAN group includes Port-3 and VAP-8 (SSID: Guest) with NAT mode and DHCP-3 server equipped. He also configure Office segment with VLAN ID 2. The VLAN group includes Port-2 and VAP-1 (SSID:

# 4G PoE IIoT Gateway

Staff) with NAT mode and DHCP-2 server equipped. At last, administrator also configure Data Center segment with VLAN ID 1. The VLAN group includes Port-1 with NAT mode to WAN interface as shown in following diagram.

Above is the general case for 3 Ethernet LAN ports in the gateway. But if the device just has one Ethernet LAN port, there will be only one VLAN group for the device. Under such situation, it still supports both the NAT and Bridge mode for the Port-based VLAN configuration.

## ➤ Tag-based VLAN

Tag-based VLAN function can group Ethernet ports, Port-1 ~ Port-4, and WiFi Virtual Access Points, VAP-1 ~ VAP-8, together with different VLAN tags for deploying subnets in Intranet. All packet flows can carry with different VLAN tags even at the same physical Ethernet port for Intranet. These flows can be directed to different destination because they have differentiated tags. The approach is very useful to group some hosts at different geographic location to be in the same workgroup.

Tag-based VLAN is also called a VLAN Trunk. The VLAN Trunk collects all packet flows with different VLAN IDs from Router device and delivers them in the Intranet. VLAN membership in a tagged VLAN is determined by VLAN ID information within the packet frames that are received on a port. Administrator can further use a VLAN switch to separate the VLAN trunk to different groups based on VLAN ID. Following is an example.

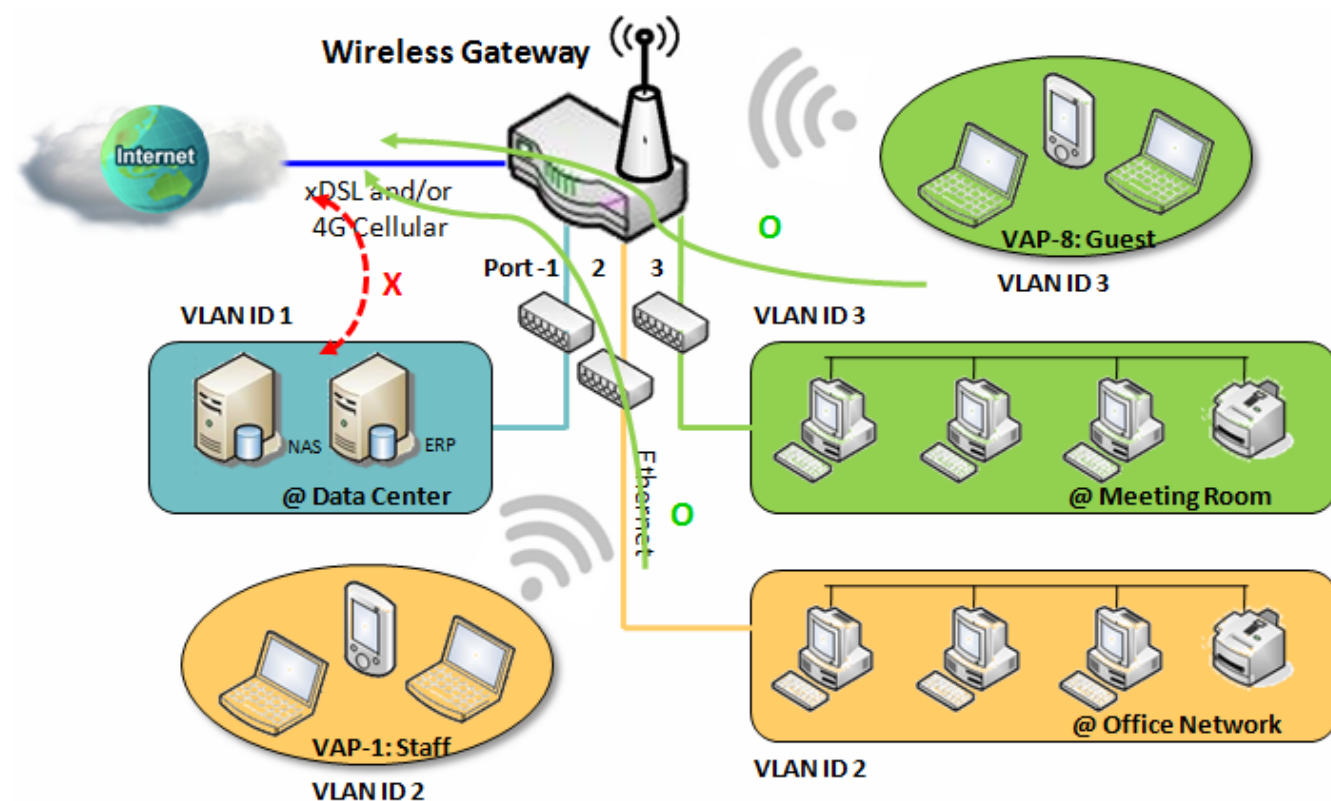

# 4G PoE IIoT Gateway

## ➤ VLAN Groups Access Control

Administrator can specify the Internet access permission for all VLAN groups. He can also configure which VLAN groups are allowed to communicate with each other.

### VLAN Group Internet Access

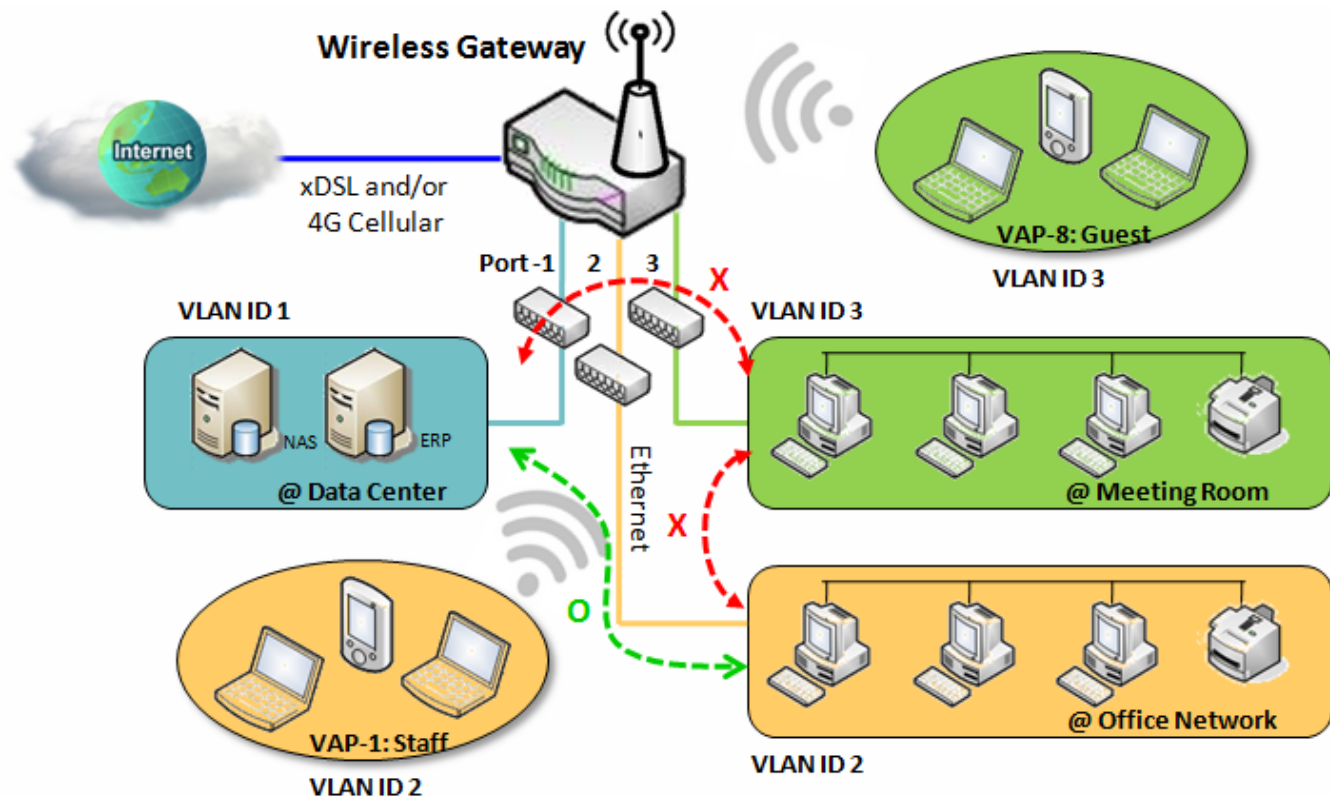

Administrator can specify members of one VLAN group to be able to access Internet or not. Following is an example that VLAN groups of VID is 2 and 3 can access Internet but the one with VID is 1 cannot access Internet. That is, visitors in meeting room and staffs in office network can access Internet. But the computers/servers in data center cannot access Internet since security consideration. Servers in data center only for trusted staffs or are accessed in secure tunnels.

# 4G PoE IIoT Gateway

## Inter VLAN Group Routing:

In Port-based tagging, administrator can specify member hosts of one VLAN group to be able to communicate with the ones of another VLAN group or not. This is a communication pair, and one VLAN group can join many communication pairs. But communication pair doesn't have the transitive property. That is, A can communicate with B, and B can communicate with C, it doesn't imply that A can communicate with C. An example is shown at following diagram. VLAN groups of VID is 1 and 2 can access each other but the ones between VID 1 and VID 3 and between VID 2 and VID 3 can't.

# 4G PoE IIoT Gateway

## VLAN Setting

Go to **Basic Network > LAN & VLAN > VLAN** Tab.

The VLAN function allows you to divide local network into different virtual LANs. There are Port-based and Tag-based VLAN types. Select one that applies.

Configuration

Item	Setting
VLAN Types	Port-based ▼
System Reserved VLAN ID	Start ID <input type="text" value="1"/> (1-4091) ~ End ID <input type="text" value="5"/>

Configuration

Item	Value setting	Description
<b>VLAN Type</b>	<b>Port-based</b> is selected by default	Select the VLAN type that you want to adopt for organizing you local subnets. <b>Port-based:</b> Port-based VLAN allows you to add rule for each LAN port, and you can do advanced control with its VLAN ID. <b>Tag-based:</b> Tag-based VLAN allows you to add VLAN ID, and select member and DHCP Server for this VLAN ID. Go to <b>Tag-based VLAN List</b> table.
<b>System Reserved VLAN ID</b>	1 ~ 5 is reserved by default	Specify the VLAN ID range that is reserved for the system operation. For the Port-based/Tag-based VLAN grouping, only use the ID outside the reserved range. <b>Value Range:</b> 1 ~ 4091.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

## Port-based VLAN – Create/Edit VLAN Rules

The port-based VLAN allows you to custom each LAN port. There is a default rule shows the configuration of all LAN ports. Also, if your device has a DMZ port, you will see DMZ configuration, too. The maxima rule numbers is based on LAN port numbers.

Port-based VLAN List <span>Add</span> <span>Delete</span>										
Name	VLAN ID	VLAN Tagging	NAT / Bridge	Port Members	LAN IP Address	Subnet Mask	Joined WAN	WAN VID	Enable	Actions
DMZ	4094	X	NAT	DMZ Port	192.168.6.254	255.255.255.0	WAN - 1	0	<input checked="" type="checkbox"/>	<span>Edit</span>
LAN	Native VLAN	X	NAT	<span>Detail</span>	192.168.123.254	255.255.255.0	All WANs	0	<input checked="" type="checkbox"/>	<span>Edit</span>

Apply Inter VLAN Group Routing

When **Add** button is applied, Port-based VLAN Configuration screen will appear, which is including 3 sections: **Port-based VLAN Configuration**, **IP Fixed Mapping Rule List**, and **Inter VLAN Group Routing** (enter through a button)

## Port-based VLAN - Configuration

Port-based VLAN Configuration	
Item	Setting
▶ Name	VLAN - 1
▶ VLAN ID	
▶ VLAN Tagging	Disable ▼
▶ NAT / Bridge	NAT ▼
▶ Port Members	Port: <input type="checkbox"/> Port-2 <input type="checkbox"/> Port-3 2.4G: <input type="checkbox"/> VAP-1 <input type="checkbox"/> VAP-2 <input type="checkbox"/> VAP-3 <input type="checkbox"/> VAP-4 <input type="checkbox"/> VAP-5 <input type="checkbox"/> VAP-6 <input type="checkbox"/> VAP-7 <input type="checkbox"/> VAP-8 5G: <input type="checkbox"/> VAP-1 <input type="checkbox"/> VAP-2 <input type="checkbox"/> VAP-3 <input type="checkbox"/> VAP-4 <input type="checkbox"/> VAP-5 <input type="checkbox"/> VAP-6 <input type="checkbox"/> VAP-7 <input type="checkbox"/> VAP-8
▶ LAN to Join	<input type="checkbox"/> Enable <input style="border: 1px solid #ccc;" type="text" value="DHCP 1"/>

Port-based VLAN Configuration (part-I)		
Item	Value setting	Description
Name	1. A Must filled setting 2. String format: already have default texts	Define the <b>Name</b> of this rule. It has a default text and cannot be modified.
VLAN ID	A Must filled setting	Define the VLAN ID number, range is 1~4094.
VLAN Tagging	<b>Disable</b> is selected by default.	The rule is activated according to <b>VLAN ID</b> and <b>Port Members</b> configuration when <b>Enable</b> is selected.  The rule is activated according <b>Port Members</b> configuration when <b>Disable</b> is selected.
NAT / Bridge	<b>NAT</b> is selected by default.	Select <b>NAT</b> mode or <b>Bridge</b> mode for the rule.
Port Members	These boxes are unchecked by default.	Select which LAN port(s) and VAP(s) that you want to add to the rule. Note: The available member list can be different for the purchased product.
LAN to Join	The box is unchecked by default.	Check the Enable box and select one of the defined DHCP Server for the List to define the DHCP server for the VLAN group. If you enabled this function, all the rest settings will be greyed out, not required to configured manually.
Save	NA	Click the <b>Save</b> button to save the configuration
Undo	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

If you didn't decide to bind the VLAN group to a pre-defined DHCP server, you have to further specify the following settings.

# 4G PoE IIoT Gateway

▶ WAN & WAN VID to Join	All WANs ▼ None
▶ LAN IP Address	192.168.2.254
▶ Subnet Mask	255.255.255.0 (/24) ▼
▶ DHCP Server / Relay	Server ▼
▶ DHCP Server Name	
▶ IP Pool	Starting Address: 192.168.2.100 Ending Address: 192.168.2.200
▶ Lease Time	86400 seconds
▶ Domain Name	(Optional)
▶ Primary DNS	(Optional)
▶ Secondary DNS	(Optional)
▶ Primary WINS	(Optional)
▶ Secondary WINS	(Optional)
▶ Gateway	(Optional)
▶ Enable	<input type="checkbox"/>

Port-based VLAN Configuration (part-II)		
Item	Value setting	Description
<b>WAN &amp; WAN VID to Join</b>	All WANs is selected by default.	Select which <b>WAN</b> or <b>All WANs</b> that allow accessing Internet. Note: If Bridge mode is selected, you need to select a WAN and enter a VID.
<b>LAN IP Address</b>	A Must filled setting	Assign an <b>IP Address</b> for the DHCP Server that the rule used, this IP address is a gateway IP.
<b>Subnet Mask</b>	255.255.255.0(/24) is selected by default.	Select a <b>Subnet Mask</b> for the DHCP Server.
<b>DHCP Server /Relay</b>	Server is selected by default.	Define the <b>DHCP Server</b> type. There are three types you can select: <b>Server</b> , <b>Relay</b> , and <b>Disable</b> . <b>Relay</b> : Select <b>Relay</b> to enable DHCP Relay function for the VLAN group, and you only need to fill the <b>DHCP Server IP Address</b> field. <b>Server</b> : Select <b>Server</b> to enable DHCP Server function for the VLAN group, and you need to specify the DHCP Server settings. <b>Disable</b> : Select <b>Disable</b> to disable the DHCP Server function for the VLAN group.
<b>DHCP Server IP Address (for DHCP Relay only)</b>	A Must filled setting	If you select <b>Relay</b> type of DHCP Server, assign a <b>DHCP Server IP Address</b> that the gateway will relay the DHCP requests to the assigned DHCP server.
<b>DHCP Option 82 (for DHCP Relay only)</b>	An Optional filled setting	If you select <b>Relay</b> type of DHCP Server, you can further enable the DHCP Option 82 setting if the DHCP server support it.
<b>DHCP Server Name</b>	A Must filled setting	Define name of the DHCP Server for the specified VLAN group.
<b>IP Pool</b>	A Must filled setting	Define the IP Pool range. There are <b>Starting Address</b> and <b>Ending Address</b> fields. If a client requests an IP address from this DHCP Server, it will assign an IP address in the range of <b>IP pool</b> .

## 4G PoE IIoT Gateway

---

<b>Lease Time</b>	A Must filled setting	Define a period of time for an IP Address that the DHCP Server leases to a new device. By default, the <b>lease time</b> is 86400 seconds.
<b>Domain Name</b>	String format can be any text	The Domain Name of this DHCP Server. <b><u>Value Range:</u></b> 0 ~ 31 characters.
<b>Primary DNS</b>	IPv4 format	The Primary DNS of this DHCP Server.
<b>Secondary DNS</b>	IPv4 format	The Secondary DNS of this DHCP Server.
<b>Primary WINS</b>	IPv4 format	The Primary WINS of this DHCP Server.
<b>Secondary WINS</b>	IPv4 format	The Secondary WINS of this DHCP Server.
<b>Gateway</b>	IPv4 format	The Gateway of this DHCP Server.
<b>Enable</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration
<b>Undo</b>	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

## 4G PoE IIoT Gateway

Besides, you can add some IP rules in the **IP Fixed Mapping Rule List** if DHCP Server for the VLAN groups is required.

IP Fixed Mapping Rule List <span>Add</span> <span>Delete</span>			
MAC Address	IP Address	Enable	Actions

When **Add** button is applied, **Mapping Rule Configuration** screen will appear.

Mapping Rule Configuration		
Item	Value setting	Description
MAC Address	A Must filled setting	Define the <b>MAC Address</b> target that the DHCP Server wants to match.
IP Address	A Must filled setting	Define the <b>IP Address</b> that the DHCP Server will assign. If there is a request from the MAC Address filled in the above field, the DHCP Server will assign this <b>IP Address</b> to the client whose <b>MAC Address</b> matched the rule.
Enable	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
Save	NA	Click the <b>Save</b> button to save the configuration

Note: ensure to always click on **Apply** button to apply the changes after the web browser refreshed taken you back to the VLAN page.

Port	VLAN IDs		
Port2	Native VLAN		
Port3	Native VLAN		

# 4G PoE IIoT Gateway

## 2.2.3 DHCP Server

### ➤ DHCP Server

The gateway supports up to 4 DHCP servers to fulfill the DHCP requests from different VLAN groups (please refer to VLAN section for getting more usage details). And there is one default setting for whose LAN IP Address is the same one of gateway LAN interface, with its default Subnet Mask setting as “255.255.255.0”, and its default IP Pool ranges is from “.100” to “.200” as shown at the DHCP Server List page on gateway’s WEB UI.

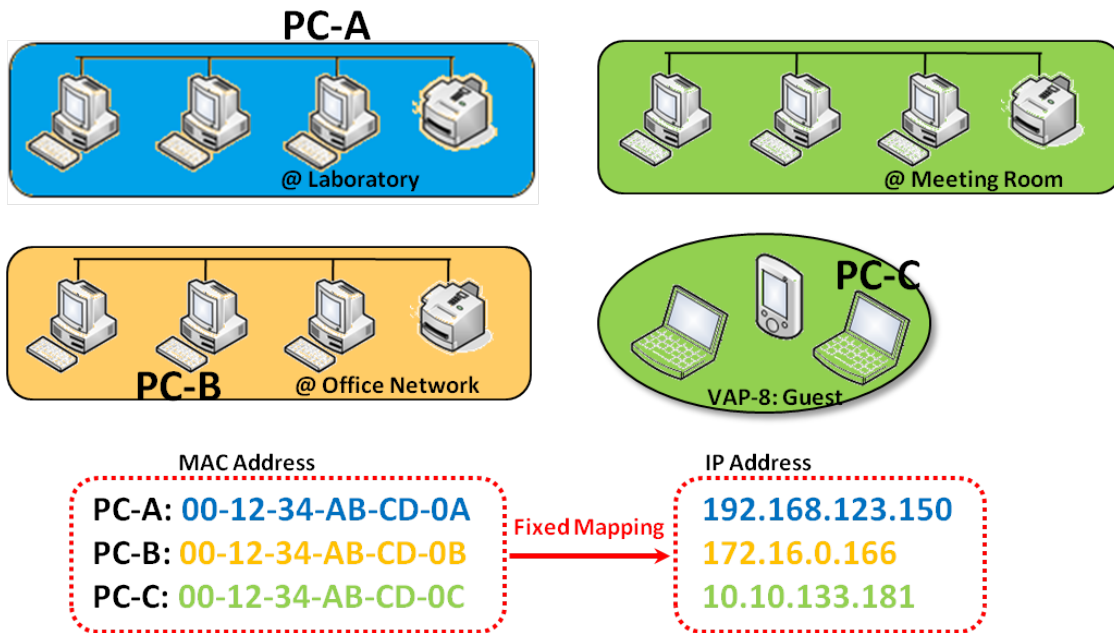

User can add more DHCP server configurations by clicking on the “Add” button behind “DHCP Server List”, or clicking on the “Edit” button at the end of each DHCP Server on list to edit its current settings. Besides, user can select a DHCP Server and delete it by clicking on the “Select” check-box and the “Delete” button.

# 4G PoE IIoT Gateway

## ➤ Fixed Mapping

User can assign fixed IP address to map the specific client MAC address by select them then copy, when targets were already existed in the **DHCP Client List**, or to add some other Mapping Rules by manually in advance, once the target's MAC address was not ready to connect.

# 4G PoE IIoT Gateway

## DHCP Server Setting

Go to **Basic Network > LAN & VLAN > DHCP Server** Tab.

The DHCP Server setting allows user to create and customize DHCP Server policies to assign IP Addresses to the devices on the local area network (LAN).

### Create / Edit DHCP Server Policy

The gateway allows you to custom your DHCP Server Policy. If multiple LAN ports are available, you can define one policy for each LAN (or VLAN group), and it supports up to a maximum of 4 policy sets.

DHCP Server List <span>Add</span> <span>Delete</span> <span>DHCP Client List</span> <span>↑</span> <span>×</span>												
DHCP Server Name	LAN IP Address	Subnet Mask	IP Pool	Lease Time	Domain Name	Primary DNS	Secondary DNS	Primary WINS	Secondary WINS	Gateway	Enable	Actions

## 2.2.4 Power over Ethernet

Power Configuration

Item	Setting
PoE Power Budget	120Watts ▼

PoE Port Definition

Port Number	Power Limit	Low Priority PD Knockoff	PD Ping Check	PD No-response Action	PD Power Overload	Time Schedule	Actions
Port-1	Auto	Highest	Disable	No Action	No Action	Always	Edit
Port-2	Auto	Highest	Disable	No Action	No Action	Always	Edit
Port-3	Auto	Highest	Disable	No Action	No Action	Always	Edit
Port-4	Auto	Highest	Disable	No Action	No Action	Always	Edit

Power over Ethernet (PoE) describes any of several standardized or ad-hoc systems which pass electric power along with data on twisted pair Ethernet cabling. This allows a single cable to provide both data connection and electric power to devices such as wireless access points, IP cameras, and VoIP phones.

This PoE cellular gateway integrated four-port PoE switch function, and plays as Power Sourcing Equipment (PSE) role that provides power on the Ethernet cable. The PoE design is compliant to IEEE802.3af/at standard, The PSE can auto-detect the type of connected PD (Powered Device) and provide adequate power to it. The maximum allowed continuous output power per cable is 15.4W for IEEE 802.3af PD device, and 30W for IEEE802.3at PD device.

However, to make the PoE cellular gateway provide required power through the Ethernet cables, you have to prepare required PoE power supply and connect it to the PoE cellular gateway properly, as stated in **Section 1.6 Hardware Installation / Connecting Power**. The PSE power sourcing capability is up to 120W. If you intend to connect four 802.3at PD devices to the PoE cellular gateway, you have to make sure your PoE power supply can provide enough power, more than 120W (e.g., power supply with rated capability 180W) to the gateway.

In addition to provide required power to connected PDs, this PoE cellular gateway also provides simple management function to control the power budgets and connected PDs. The PoE port management function includes PoE port control, PD failure check and Power Off/On by schedule.

# 4G PoE IIoT Gateway

## Power over Ethernet Setting

Go to **Basic Network > LAN & VLAN > Power over Ethernet** Tab.

The Power over Ethernet setting allows administrator to control PoE related function, such as Power Budget, Port Power Limit, etc...

### Define Power Budget

Power Configuration

Item	Value setting	Description
PoE Power Budget	120Watts by default	<p>Specify the PoE Power Budget. It can be <b>120Watts, 60Watts, or Manual</b>. If you select <b>Manual</b>, you have to enter the power budget.</p> <p>With specified power budget, the PoE gateway can monitor whether the connected PD devices caused power overflow, and force the connected PD with lowest priority to be off line to prevent power overflow situation.</p> <p><u><b>Value Range:</b> 4 ~ 120 Watts.</u></p>

### Edit PoE Port Definition

Click the **Edit** button to edit the settings for each PoE port.

PoE Port Definition

Port Number	Power Limit	Low Priority PD Knockoff	PD Ping Check	PD No-response Action	PD Power Overload	Time Schedule	Enable	Actions
Port-1	Auto	Highest	Disable	No Action	No Action	Always	<input checked="" type="checkbox"/>	Edit
Port-2	Auto	Highest	Disable	No Action	No Action	Always	<input checked="" type="checkbox"/>	Edit
Port-3	Auto	Highest	Disable	No Action	No Action	Always	<input checked="" type="checkbox"/>	Edit
Port-4	Auto	Highest	Disable	No Action	No Action	Always	<input checked="" type="checkbox"/>	Edit

PoE Port Definition

Item	Value setting	Description
Power Limit	Auto by default	<p>Specify the Power Limit for the PoE port. It can be <b>Auto, 802.3af (4W), 802.3af (7W), 802.3af(15.4W), 802.3at(30W)</b>, or <b>Manual</b>. If you select <b>Manual</b>, you have to enter the power limit.</p> <p><u><b>Value Range:</b> 1 ~ 30 Watts.</u></p>

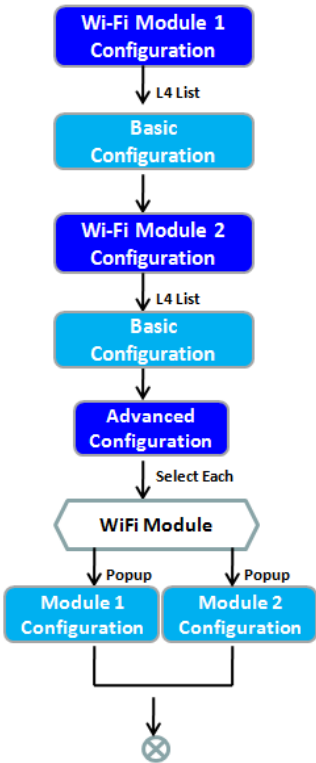

## 4G PoE IIoT Gateway

<b>Low Priority PD Knockoff</b>	<b>Highest</b> by default	Specify the Port Priority. It can be <b>Highest, High, or Low</b> . Whenever there is a shortage of total power budget, the port with lowest priority will be disabled automatically to provide required power to the ports with higher priority. If there are more than one ports with the same lowest priority, the port number decide it, Port 1 > Port 2 > Port 3 > Port 4, it means Port 4 has the lowest priority on such case..
<b>PD Ping Check</b>	The box is unchecked ( <b>Disable</b> ) by default	Check the <b>Enable</b> box to activate PD Ping Check function. In addition to enable the function, you have to specify a timeout value for timeout check. <b><u>Value Range:</u> 10 ~ 300 seconds.</b>
<b>PD No-response Action</b>	<b>No Action</b> by default	Specify the the action to take when the PD doesn't reply the Ping check activity. (PD No-response). It could be <b>No Action</b> or <b>Power off/on</b> . Select <b>Power off/on</b> to restart the PD device, if required.
<b>PD Power Overload</b>	<b>No Action</b> by default	Specify the the action to take when the PD Power overflow occurs for a certain port. It can be <b>No Action</b> or <b>Power Long Time Off/On</b> . If the Power overload occurs (PD consumes more power than the value specified in the Power Limit setting), the PSE function for the PoE port will be disabled for 30 minutes. That is, PD device will be powered OFF for a long time, and then after 30minutes, it will be powered ON again. If you encountered such situation, please check if the Power Limit setting is properly, or the PD device always consumes too much power.
<b>Time Schedule</b>	<b>(0)Always</b> by default	Apply <b>Time Schedule</b> to control the power ON/OFF schedule of the connected PD, otherwise leave it as <b>(0) Always</b> . If the dropdown list is empty, ensure <b>Time Schedule</b> is pre-configured. Refer to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.
<b>Enable</b>	The box is checked by default	Check the <b>Enable</b> box to activate PoE-PSE function for a certain PoE port.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.

Note: If the sum of Power Limits for all ports is greater than the specified Power Budget, the port with lowest priority will be disabled to make the PSE work normally.

The gateway provides WiFi interface for mobile devices or BYOD devices to connect for Internet/Intranet accessing. WiFi function is usually modulized design in a gateway, and there can be single or dual modules within a gateway. The WiFi system in the gateway complies with IEEE 802.11ac/11n/11g/11b standard in 2.4GHz or 5GHz single band or 2.4G/5GHz concurrent dual bands of operation. There are several wireless operation modes provided by this device. They are: “AP Router Mode”, “WDS Only Mode”, and “WDS Hybrid Mode”. You can choose the expected mode from the wireless operation mode list.

There are some sub-sections for you to configure the WiFi function, including “Basic Configuration” and “Advanced Configuration”. In Basic Configuration section, you have to finish almost all the settings for using the WiFi function. And the Advanced Configuration section provides more parameters for advanced user to fine tune the connectivity performance for the WiFi function.

# 4G PoE IIoT Gateway

## 2.3.1 WiFi Configuration

1	VAP 1	Staff_2.4G	WPA2-PSK	AES	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Edit Select
2	VAP 2	default	Open	None	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Edit Select

VAP Configuration	
Item	Setting
VAP	VAP1
SSID	Staff_2.4G
Max. STA	<input type="checkbox"/> Enable
Authentication	WPA2-PSK
Encryption	AES
Preshared Key	1234567890
STA Isolation	<input checked="" type="checkbox"/>
Broadcast SSID	<input checked="" type="checkbox"/>
Enable	<input checked="" type="checkbox"/>

Due to optional module(s) and frequency band, you need to setup module one by one. For each module, you need to specify the operation mode, and then setup the virtual APs for wireless access.

Hereunder are the scenarios for each wireless operation mode, you can get how it works, and what is the difference among them. To connect your wireless devices with the wireless gateway, make sure your application scenario for WiFi network and choose the most adequate operation mode.

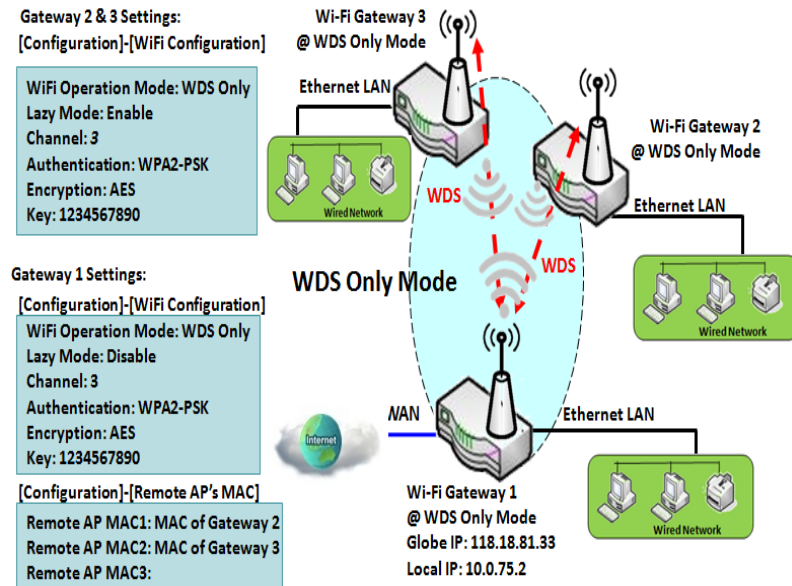

### AP Router Mode

This mode allows you to get your wired and wireless devices connected to form the Intranet of the wireless gateway, and the Intranet will link to the Internet with NAT mechanism of the gateway. So, this gateway is working as a WiFi AP, but also a WiFi hotspot for Internet accessing service. It means local WiFi clients can associate to it, and go to Internet. With its NAT mechanism, all of wireless clients don't need to get public IP addresses from ISP.

# 4G PoE IIoT Gateway

## WDS Only Mode

WDS (Wireless Distributed System) Only mode drives a WiFi gateway to be a bridge for its wired Intranet and a repeater to extend distance. You can use multiple WiFi gateways as a WiFi repeater chain with all gateways setup as "WDS Only" mode. All gateways can communicate with each other through WiFi. All wired client hosts within each gateway can also communicate each other in the scenario. Only one gateway within repeater chain can be DHCP server to provide IP for all wired client hosts of every gateway which being disabled DHCP server. This gateway can be NAT router to provide internet access

The diagram illustrates that there are two wireless gateways 2, 3 running at "WDS Only"

mode. They both use channel 3 to link to local Gateway 1 through WDS. Both gateways connected by WDS need to setup the remote AP MAC for each other. All client hosts under gateway 2, 3 can request IP address from the DHCP server at gateway 1. Besides, wireless Gateway 1 also execute the NAT mechanism for all client hosts Internet accessing.

## WDS Hybrid Mode

WDS hybrid mode includes both WDS and AP Router mode. WDS Hybrid mode can act as an access point for its WiFi Intranet and a WiFi bridge for its wired and WiFi Intranets at the same time. Users can thus use the features to build up a large wireless network in a large space like airports, hotels or campus.

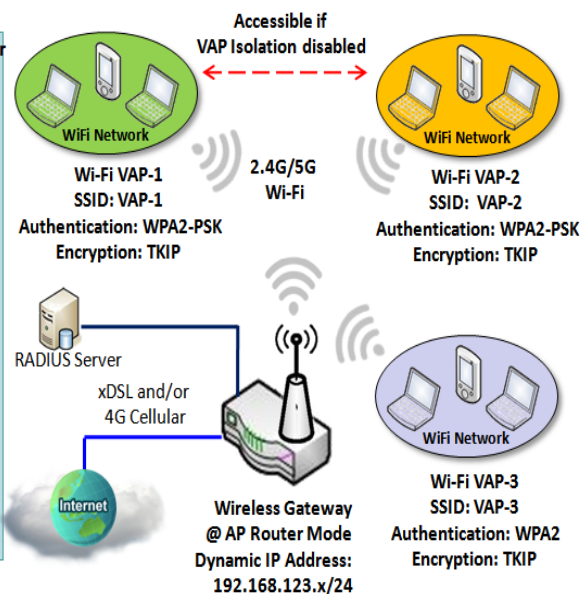

The diagram illustrates Gateway 1, Gateway 2 and AP 1 connected by WDS. Each gateway has access point function for WiFi client access. Gateway 1 has DHCP server to assign IP to each client hosts. All gateways and AP are under WDS hybrid mode. To setup WDS hybrid mode, it need to fill all configuration items similar to that of AP-router and WDS modes.

# 4G PoE IIoT Gateway

## Multiple VAPs

### Gateway Settings:

WiFi Operation Mode: AP Router  
VAP1  
SSID: VAP-1  
Authentication: WPA2-PSK  
Encryption: TKIP  
Key: 1234567890  
  
VAP2  
SSID: VAP-2  
Authentication: WPA2-PSK  
Encryption: TKIP  
Key: 1234567890  
  
VAP3  
SSID: VAP-3  
Authentication: WPA2  
Encryption: TKIP  
RADIUS Server IP: 192.168.168.  
RADIUS Server Port: 1812  
RADIUS Shared Key

VAP (Virtual Access Point) is function to partition wireless network into multiple broadcast domains. It can simulate multiple APs in one physical AP. This wireless gateway supports up to 8 VAPs. For each VAP, you need to setup SSID, authentication and encryption to control Wi-Fi client access.

Besides, there is a VAP isolation option to manage the access among VAPs. You can allow or blocks communication for the wireless clients connected to different VAPs. As shown in the diagram, the clients in VAP-1 and VAP-2 can communicate to each other when VAP Isolation is disabled.

## Wi-Fi Security – Authentication & Encryption

Wi-Fi security provides complete authentication and encryption mechanisms to enhance the data security while your data is transferred wirelessly over the air. The wireless gateway supports Shared, WPA-PSK / WPA2-PSK and WPA / WPA2 authentication. You can select one authentication scheme to validate the wireless clients while they are connecting to the AP. As to the data encryption, the gateway supports WEP, TKIP and AES. The selected encryption algorithm will be applied to the data while the wireless connection is established.

# 4G PoE IIoT Gateway

## WiFi Configuration Setting

The WiFi configuration allows user to configure 2.4GHz or 5GHz WiFi settings.

Go to **Basic Network > WiFi > WiFi Module One** Tab. If the gateway is equipped with two WiFi modules, there will be another **WiFi Module Two**. You can do the similar configurations on both WiFi modules.

### Basic Configuration

Basic Configuration	
Item	Setting
▶ Operation Band	2.4G Single Band

Basic Configuration		
Item	Value setting	Description
Operation Band	A Must filled setting	Specify the intended operation band for the WiFi module. Basically, this setting is fixed and cannot be changed once the module is integrated into the product. However, there is some module with selectable band for user to choose according to his network environment. Under such situation, you can specify which operation band is suitable for the application.

### Configure WiFi Setting

2.4G WiFi Configuration	
Item	Setting
▶ WiFi Module	<input checked="" type="checkbox"/> Enable
▶ Channel	Auto <input checked="" type="radio"/> By AP Numbers <input type="radio"/> By Less Interference
▶ WiFi System	802.11b/g/n Mixed
▶ WiFi Operation Mode	AP Router Mode

Configuring Wi-Fi Settings		
Item	Value setting	Description
WiFi Module	The box is checked by default	Check the <b>Enable</b> box to activate Wi-Fi function.
Channel	1. A Must filled setting. 2. <b>Auto</b> is selected be default.	Select a radio channel for the VAP. Each channel is corresponding to different radio band. The permissible channels depend on the <b>Regulatory Domain</b> . There are two available options when <b>Auto</b> is selected: <ul style="list-style-type: none"><li>● <b>By AP Numbers</b> The channel will be selected according to AP numbers (The less, the better).</li></ul>

# 4G PoE IIoT Gateway

		<ul style="list-style-type: none"> <li>● <b>By Less Interference</b> The channel will be selected according to interference. (The lower, the better).</li> </ul>
<b>WiFi System</b>	A Must filled setting	Specify the preferred WiFi System. The dropdown list of <b>WiFi system</b> is based on <b>IEEE 802.11</b> standard. <ul style="list-style-type: none"> <li>● <b>2.4G WiFi</b> can select b, g and n only or mixed with each other.</li> <li>● <b>5G WiFi</b> can select a, n and ac only or mixed with each other.</li> </ul>
<b>WiFi Operation Mode</b>		Specify the <b>WiFi Operation Mode</b> according to your application. Go to the following table for <b>AP Router Mode</b> , <b>WDS Only Mode</b> , and <b>WDS Hybrid Mode</b> settings.  Note: The available operation modes depend on the product specification.

In the following, the specific configuration description for each WiFi operation mode is given.

## AP Router Mode & VAPs Configuration

For the AP Router mode, the device not only supports **stations connection** but also the **router function**. The **WAN** port and the **NAT** function are **enabled**.

▶ WiFi Operation Mode	AP Router Mode ▾
▶ Green AP	<input type="checkbox"/> Enable
▶ VAP Isolation	<input checked="" type="checkbox"/> Enable
▶ Time Schedule	(0) Always ▾

AP Router Mode		
Item	Value setting	Description
<b>Green AP</b>	The box is unchecked by default.	Check the <b>Enable</b> box to activate <b>Green AP</b> function.
<b>VAP Isolation</b>	The box is checked by default.	Check the <b>Enable</b> box to activate this function. By default, the box is checked; it means that stations which associated to different VAPs cannot communicate with each other.
<b>Time Schedule</b>	A Must filled setting	Apply a specific <b>Time Schedule</b> to this rule; otherwise leave it as <b>(0) Always</b> . If the dropdown list is empty ensure <b>Time Schedule</b> is pre-configured. Refer to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.

2.4G VAP List <span>Add</span> <span>Delete</span> <span>↑</span> <span>×</span>								
ID	VAP	SSID	Authentication	Encryption	STA Isolation	Broadcast SSID	Enable	Actions
1	VAP 1	Staff_2.4G	WPA2-PSK	AES	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> Select

By default, VAP 1 is enabled and security key is required to connect to the gateway wirelessly to enhance the security level and prevent unexpected access of un-authorized devices.

**The default wifi key is printed on both the device label and the Security Card. It is created randomly and differs from devices. So, you can connected to the VAP1 (SSID: Staff\_2.4G) with the provided key.**

**However, it is strongly recommended that you have to change the security key to a easy-to-remember one**

# 4G PoE IIoT Gateway

by clicking the Edit button.

Click **Add** / **Edit** button in the VAP List screen to create or edit the settings for a VAP. A VAP Configuration screen will appear.

For VAP 1:

VAP Configuration

Item	Setting
VAP	VAP1
SSID	Staff_2.4G
Max. STA	<input type="checkbox"/> Enable
Authentication	WPA2-PSK
Encryption	AES
Preshared Key	1234567890
STA Isolation	<input checked="" type="checkbox"/>
Broadcast SSID	<input checked="" type="checkbox"/>
Enable	<input checked="" type="checkbox"/>

For others:

VAP Configuration

Item	Setting
VAP	VAP2
SSID	default
Max. STA	<input type="checkbox"/> Enable
Authentication	Open
Encryption	None
STA Isolation	<input type="checkbox"/>
Broadcast SSID	<input type="checkbox"/>
Enable	<input type="checkbox"/>

VAP Configuration		
Item	Value setting	Description
SS ID	1. String format : Any text	Enter the SSID for the VAP, and decide whether to broadcast the SSID or not. The <b>SSID</b> is used for identifying from another AP, and client stations will associate with AP according to SSID.
Max. STA	The box is unchecked	Check this box and enter a limitation to limit the maximum number of client

# 4G PoE IIoT Gateway

	by default.	station. The box is unchecked by default. It means no special limitation on the number of connected STAs.
<b>Authentication</b>		For security, there are several authentication methods supported. Client stations should provide the key when associate with this device.
		When <b>Open</b> is selected The check box named <b>802.1x</b> shows up next to the dropdown list. <ul style="list-style-type: none"> <li>● <b>802.1x</b> (The box is unchecked by default) When <b>802.1x</b> is enabled, it means the client stations will be authenticated by RADIUS server. <b>RADIUS Server IP</b> (The default IP is 0.0.0.0) <b>RADIUS Server Port</b> (The default value is 1812) <b>RADIUS Shared Key</b></li> </ul>
		When <b>Shared</b> is selected The pre-shared WEP key should be set for authenticating.
	1. A Must filled setting 2. VAP1: <b>WPA2-PSK</b> is selected be default; Others: <b>Open</b> is selected be default.	When <b>Auto</b> is selected The device will select <b>Open</b> or <b>Shared</b> by requesting of client automatically. The check box named <b>802.1x</b> shows up next to the dropdown list. <ul style="list-style-type: none"> <li>● <b>802.1x</b> (The box is unchecked by default) When <b>802.1x</b> is enabled, it means the client stations will be authenticated by RADIUS server. <b>RADIUS Server IP</b> (The default IP is 0.0.0.0) <b>RADIUS Server Port</b> (The default value is 1812) <b>RADIUS Shared Key</b></li> </ul>
		When <b>WPA</b> or <b>WPA2</b> is selected They are implementation of IEEE 802.11i. <b>WPA</b> only had implemented part of IEEE 802.11i, but owns the better <b>compatibility</b> . <b>WPA2</b> had fully implemented 802.11i standard, and owns the highest <b>security</b> . <ul style="list-style-type: none"> <li>● <b>RADIUS Server</b> The client stations will be authenticated by RADIUS server. <b>RADIUS Server IP</b> (The default IP is 0.0.0.0) <b>RADIUS Server Port</b> (The default value is 1812) <b>RADIUS Shared Key</b></li> </ul>
		When <b>WPA / WPA2</b> is selected It owns the same setting as <b>WPA</b> or <b>WPA2</b> . The client stations can associate with this device via <b>WPA</b> or <b>WPA2</b> .
		When <b>WPA-PSK</b> or <b>WPA2-PSK</b> is selected It owns the same encryption system as WPA or WPA2. The authentication uses pre-shared key instead of RADIUS server.
		When <b>WPA-PSK / WPA2-PSK</b> is selected It owns the same setting as <b>WPA-PSK</b> or <b>WPA2-PSK</b> . The client stations can associate with this device via <b>WPA-PSK</b> or <b>WPA2-PSK</b> .
<b>Encryption</b>	1. A Must filled setting. 2. VAP1: <b>AES</b> is selected be default; Others: <b>None</b> is selected be default.	Select a suitable encryption method and enter the required key(s). The available method in the dropdown list depends on the Authentication you selected. <b>None</b> It means that the device is open system without encrypting. <b>WEP</b> Up to 4 WEP keys can be set, and you have to select one as current key. The key type can set to <b>HEX</b> or <b>ASCII</b> . If <b>HEX</b> is selected, the key should consist of (0 to 9) and (A to F). If <b>ASCII</b> is selected, the key should consist of ASCII table.

## 4G PoE IIoT Gateway

		<p><b>TKIP</b> TKIP was proposed instead of WEP without upgrading hardware. Enter a Pre-shared Key for it. The length of key is from 8 to 63 characters.</p> <p><b>AES</b> The newest encryption system in WiFi, it also designed for the fast 802.11n high bitrates schemes. Enter a Pre-shared Key for it. The length of key is from 8 to 63 characters.</p> <p>You are recommended to use <b>AES</b> encryption instead of any others for security.</p> <p><b>TKIP / AES</b> <b>TKIP / AES</b> mixed mode. It means that the client stations can associate with this device via <b>TKIP</b> or <b>AES</b>. Enter a Pre-shared Key for it. The length of key is from 8 to 63 characters.</p>
<b>STA Isolation</b>	VAP1: The box is checked by default; Others: unchecked by default.	Check the <b>Enable</b> box to activate this function. By default, the box is checked; it means that stations which associated to the same VAP cannot communicate with each other.
<b>Broadcast SSID</b>	VAP1: The box is checked by default; Others: unchecked by default.	Check the <b>Enable</b> box to activate this function. If the broadcast SSID option is enabled, it means the SSID will be broadcasted, and the stations can associate with this device by scanning SSID.
<b>Enable</b>	VAP1: The box is checked by default; Others: unchecked by default.	Check the <b>Enable</b> box to activate this VAP.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the current configuration.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to restore configuration to previous setting before saving.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to apply the saved configuration.

# 4G PoE IIoT Gateway

## WDS Only Mode

For the WDS Only mode, the device only bridges the connected wired clients to another WDS-enabled WiFi device which the device associated with. That is, it also means the no wireless clients stat can connect to this device while WDS Only Mode is selected.

WiFi Operation Mode	WDS Only Mode
Green AP	<input type="checkbox"/> Enable
Time Schedule	(0) Always
Scan Remote AP's MAC List	Scan
Remote AP MAC 1	
Remote AP MAC 2	
Remote AP MAC 3	
Remote AP MAC 4	

WDS Only Mode		
Item	Value setting	Description
Green AP	The box is unchecked by default.	Check the <b>Enable</b> box to activate <b>Green AP</b> function.
Time Schedule	A Must filled setting	Apply a specific <b>Time Schedule</b> to this rule; otherwise leave it as <b>(0) Always</b> . If the dropdown list is empty ensure <b>Time Schedule</b> is pre-configured. Refer to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.
Scan Remote AP's MAC List	N/A	Press the <b>Scan</b> button to scan the spatial AP information, and then select one from the AP list, the MAC of selected AP will be auto filled in the following Remote AP MAC table.
Remote AP MAC 1~4	A Must filled setting	Enter the remote AP's MAC manually, or via auto-scan approach, The device will bridge the traffic to the remote AP when associated successfully.

2.4G VAP List		Add	Delete						↑	×
ID	VAP	SSID	Authentication	Encryption	STA Isolation	Broadcast SSID	Enable	Actions		
1	VAP 1	Staff_2.4G	WPA2-PSK	AES	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Edit	<input type="checkbox"/>	Select

By default, VAP 1 is enabled and security key is required to connect to the gateway wirelessly to enhance the security level and prevent unexpected access of un-authorized devices.

The default wifi key is printed on both the device label and the Security Card. It is created randomly and differs from devices. So, you can connected to the VAP1 (SSID: Staff\_2.4G) with the provided key.

However, it is strongly recommended that you have to change the security key to a easy-to-remember one by clicking the Edit button.

## 4G PoE IIoT Gateway

Under **WDS Only** mode, only VAP1 is available for further specifying the required authentication and Encryption settings. Click **Edit** button in the VAP List screen and a VAP Configuration screen will appear for you to configure the required settings

VAP Configuration

Item	Setting
▶ VAP	VAP1
▶ SSID	Staff_2.4G

## 2.3.2 Wireless Client List

The **Wireless Client List** page shows the information of wireless clients which are associated with this device.

Go to **Basic Network > WiFi > Wireless Client List** Tab.

### Select Target WiFi

Target WiFi	
Item	Setting
Module Select	One ▼
Operation Band	2.4G ▼
Multiple AP Names	All ▼

Target Configuration		
Item	Value setting	Description
Module Select	A Must filled setting.	Select the WiFi module to check the information of connected clients. For those single WiFi module products, this option is hidden.
Operation Band	A Must filled setting.	Specify the intended operation band for the WiFi module. Basically, this setting is fixed and cannot be changed once the module is integrated into the product. However, there is some module with selectable band for user to choose according to his network environment. Under such situation, you can specify which operation band is suitable for the application.
Multiple AP Names	1. A Must filled setting. 2. All is selected by default.	Specify the VAP to show the associated clients information in the following Client List. By default, All VAP is selected.

### Show Client List

The following Client List shows the information for wireless clients that is associated with the selected VAP(s).

Client List								
IP Address Configuration & Address	Host Name	MAC Address	Mode	Rate	RSSI0	RSSI1	Signal	Interface

Target Configuration		
Item	Value setting	Description
IP Address Configuration & Address	N/A	It shows the Client's IP address and the deriving method. <b>Dynamic</b> means the IP address is derived from a DHCP server. <b>Static</b> means the IP address is a fixed one that is self-filled by client.
Host Name	N/A	It shows the host name of client.
MAC Address	N/A	It shows the MAC address of client.
Mode	N/A	It shows what kind of <b>Wi-Fi system</b> the client used to associate with this device.
Rate	N/A	It shows the <b>data rate</b> between client and this device.

## 4G PoE IIoT Gateway

---

<b>RSSI0, RSSI1</b>	N/A	It shows the RX sensitivity (RSSI) value for each radio path.
<b>Signal</b>	N/A	The <b>signal strength</b> between client and this device.
<b>Interface</b>	N/A	It shows the VAP ID that the client associated with.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the Client List immediately.

## 2.3.3 Advanced Configuration

This device provides advanced wireless configuration for professional user to optimize the wireless performance under the specific installation environment. Please note that if you are not familiar with the WiFi technology, just leave the advanced configuration with its default values, or the connectivity and performance may get worse with improper settings.

Go to **Basic Network > WiFi > Advanced Configuration** Tab.

### Select Target WiFi

Target WiFi	
Item	Setting
▶ Module Select	One ▼
▶ Operation Band	2.4G ▼

Target Configuration		
Item	Value setting	Description
<b>Module Select</b>	A Must filled setting.	Select the WiFi module to check the information of connected clients. For those single WiFi module products, this option is hidden.
<b>Operation Band</b>	A Must filled setting.	Specify the intended operation band for the WiFi module. Basically, this setting is fixed and cannot be changed once the module is integrated into the product. However, there is some module with selectable band for user to choose according to his network environment.

### Setup Advanced Configuration

Advanced Configuration	
Item	Setting
▶ Regulatory Domain	(1-11)
▶ Beacon Interval	100 Range: (1~1000 msec)
▶ DTIM Interval	3 Range: (1~255)
▶ RTS Threshold	2347 Range: (1~2347)
▶ Fragmentation	2346 Range: (256~2346)
▶ WMM	<input checked="" type="checkbox"/> Enable
▶ Short GI	400ns ▼
▶ TX Rate	Best ▼
▶ RF Bandwidth	Auto ▼
▶ Transmit Power	100% ▼
▶ WIDS	<input type="checkbox"/> Enable

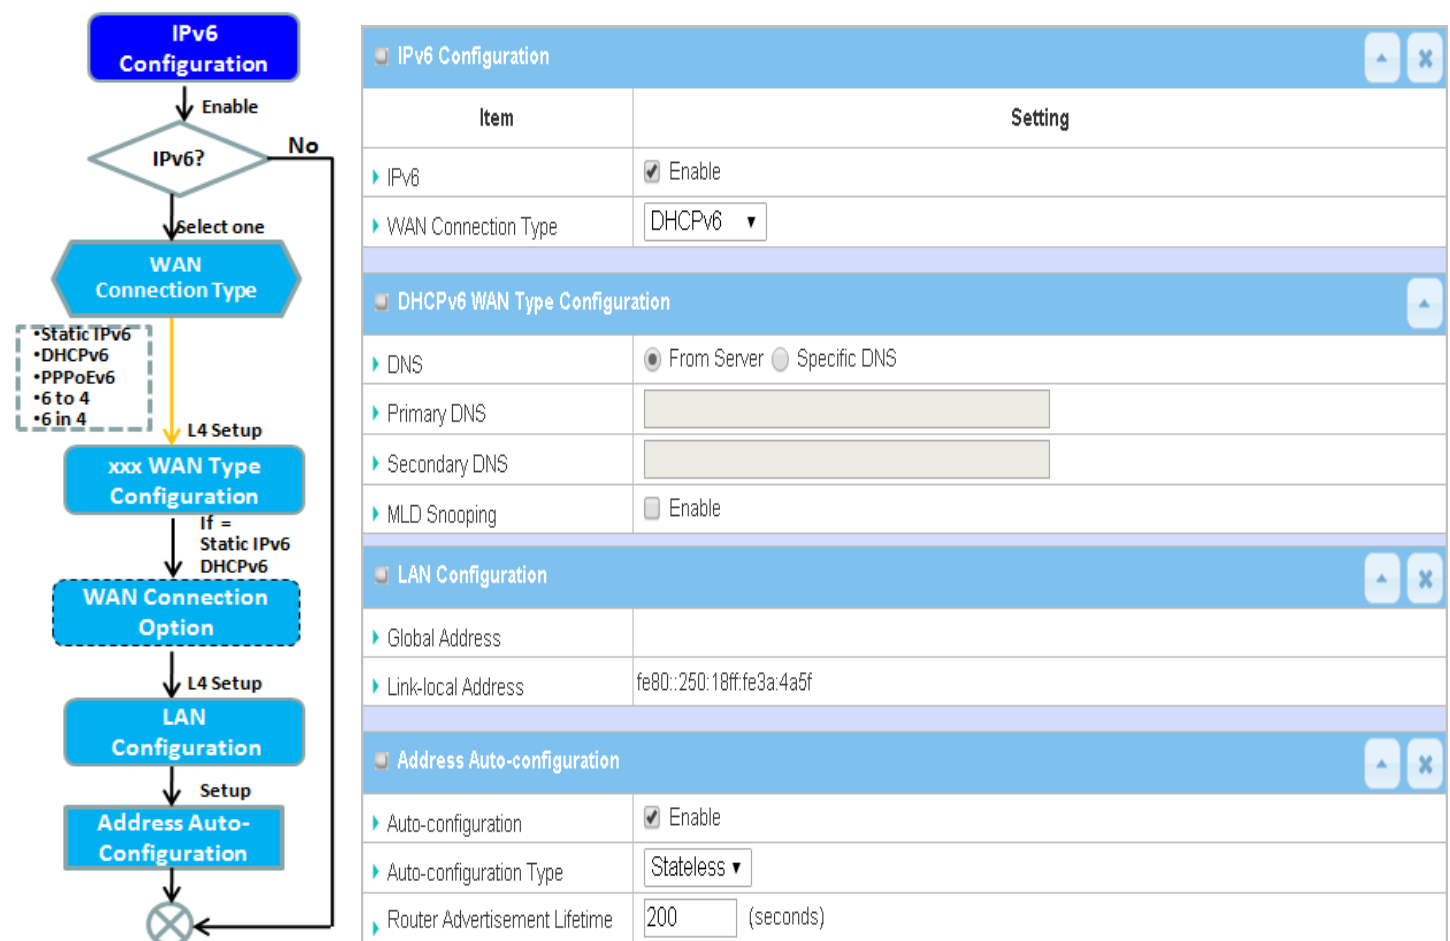

## 4G PoE IIoT Gateway

Advanced Configuration		
Item	Value setting	Description
<b>Regulatory Domain</b>	The default setting is according to where the product sale to	It limits the available radio channel of this device. The permissible channels depend on the <b>Regulatory Domain</b> .
<b>Beacon Interval</b>	100	It shows the time interval between each beacon packet broadcasted. The beacon packet contains <b>SSID</b> , <b>Channel ID</b> and <b>Security setting</b> .
<b>DTIM Interval</b>	3	A <b>DTIM (Delivery Traffic Indication Message)</b> is a countdown informing clients of the next window for listening to broadcast message. When the device has buffered broadcast message for associated client, it sends the next DTIM with a DTIM value.
<b>RTS Threshold</b>	2347	<b>RTS (Request to send) Threshold</b> means when the packet size is over the setting value, then active <b>RTS</b> technique. RTS/CTS is a <b>collision avoidance</b> technique. It means RTS <b>never</b> activated when the threshold is set to <b>2347</b> .
<b>Fragmentation</b>	2346	Wireless frames can be divided into smaller units (fragments) to <b>improve performance</b> in the presence of RF interference at the limits of RF coverage.
<b>WMM</b>	The box is checked by default	<b>WMM (Wi-Fi Multimedia)</b> can help control <b>latency</b> and <b>jitter</b> when transmitting <b>multimedia content</b> over a wireless connection.
<b>Short GI</b>	By default <b>400ns</b> is selected	<b>Short GI (Guard Interval)</b> is defined to set the sending interval between each packet. Note that lower <b>Short GI</b> could <b>increase</b> not only the <b>transition rate</b> but also <b>error rate</b> .
<b>TX Rate</b>	By default <b>Best</b> is selected	It means the <b>data transition rate</b> . When <b>Best</b> is selected, the device will choose a proper <b>data rate</b> according to <b>signal strength</b> .
<b>RF Bandwidth</b>	By default <b>Auto</b> is selected	The setting of RF bandwidth limits the maximum data rate.
<b>Transmit Power</b>	By default <b>100%</b> is selected	Normally the wireless transmitter operates at 100% power. By setting the <b>transmit power</b> to control the Wi-Fi <b>coverage</b> .
<b>5G Band Steering</b>	The box is unchecked by default	When the client station associate with 2.4G Wi-Fi, the device will send the client to 5G Wi-Fi automatically if the client is available on accessing this 5G Wi-Fi band. This option is only available on the module that supports 5GHz band.
<b>WIDS</b>	The box is unchecked by default	The WIDS (Wireless Intrusion Detection System) will analyze all packets and make a statistic table in WiFi status. Go to <b>Status &gt; Basic Network &gt; WiFi</b> tab for detailed WIDS status.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the current configuration.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to restore configuration to previous setting before saving.

## 2.4 IPv6

The growth of the Internet has created a need for more addresses than are possible with IPv4. IPv6 (Internet Protocol version 6) is a version of the Internet Protocol (IP) intended to succeed IPv4, which is the protocol currently used to direct almost all Internet traffic. IPv6 also implements additional features not present in IPv4. It simplifies aspects of address assignment (stateless address auto-configuration), network renumbering and router announcements when changing Internet connectivity providers.

### 2.4.1 IPv6 Configuration

The **IPv6 Configuration** setting allows user to set the IPv6 connection type to access the IPv6 network. This gateway supports various types of IPv6 connection, including **Static IPv6**, **DHCPv6**, and **PPPoEv6**

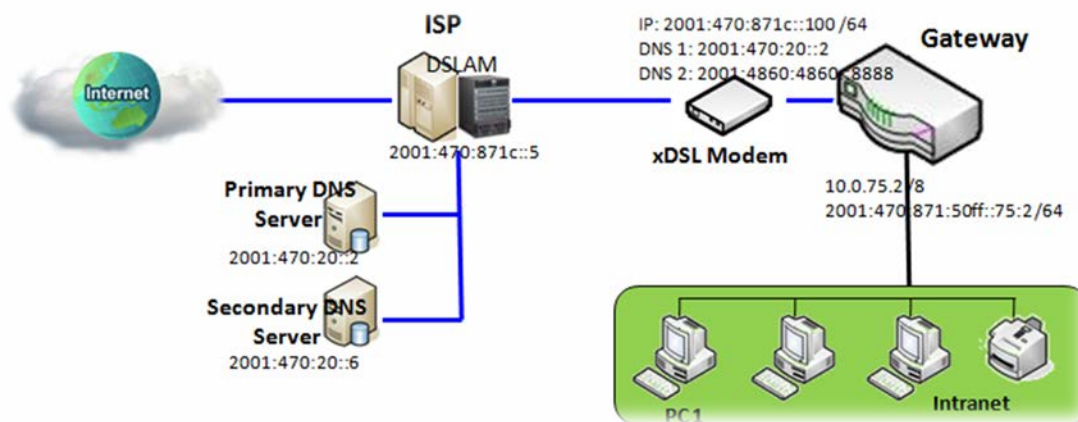

**Note:** The available WAN connection types can be different, depending on the Interface type of WAN-1.

# 4G PoE IIoT Gateway

## IPv6 WAN Connection Type

### Static IPv6

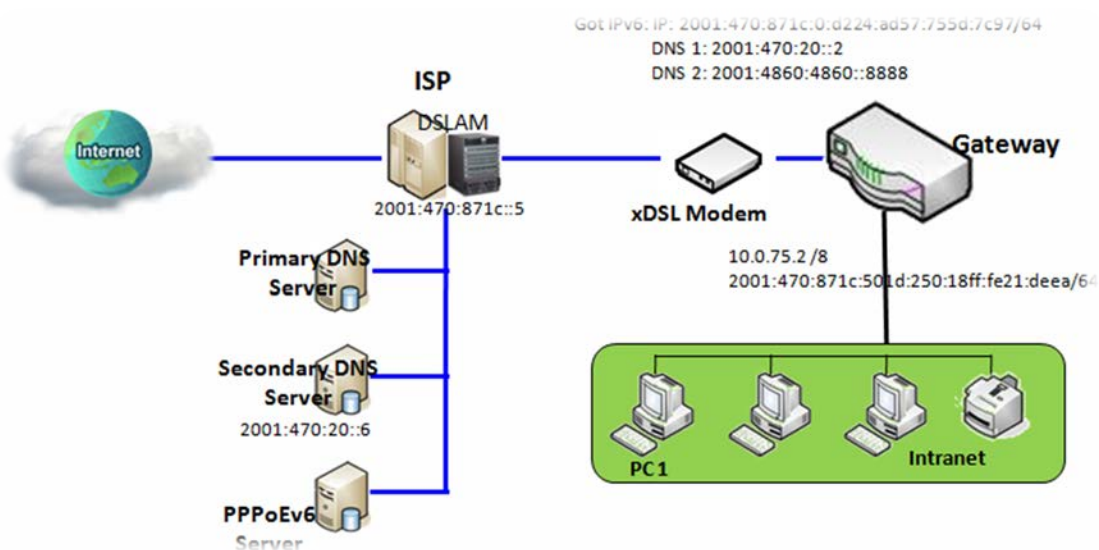

Static IPv6 does the same function as static IPv4. The static IPv6 provides manual setting of IPv6 address, IPv6 default gateway address, and IPv6 DNS.

Above diagram depicts the IPv6 IP addressing, type in the information provided by your ISP to setup the IPv6 network.

### DHCPv6

DHCP in IPv6 does the same function as DHCP in IPv4. The DHCP server sends IP address, DNS server addresses and other possible data to the DHCP client to configure automatically. The server also sends a lease time of the address and time to re-contact the server for IPv6 address renewal. The client has then to resend a request to renew the IPv6 address.

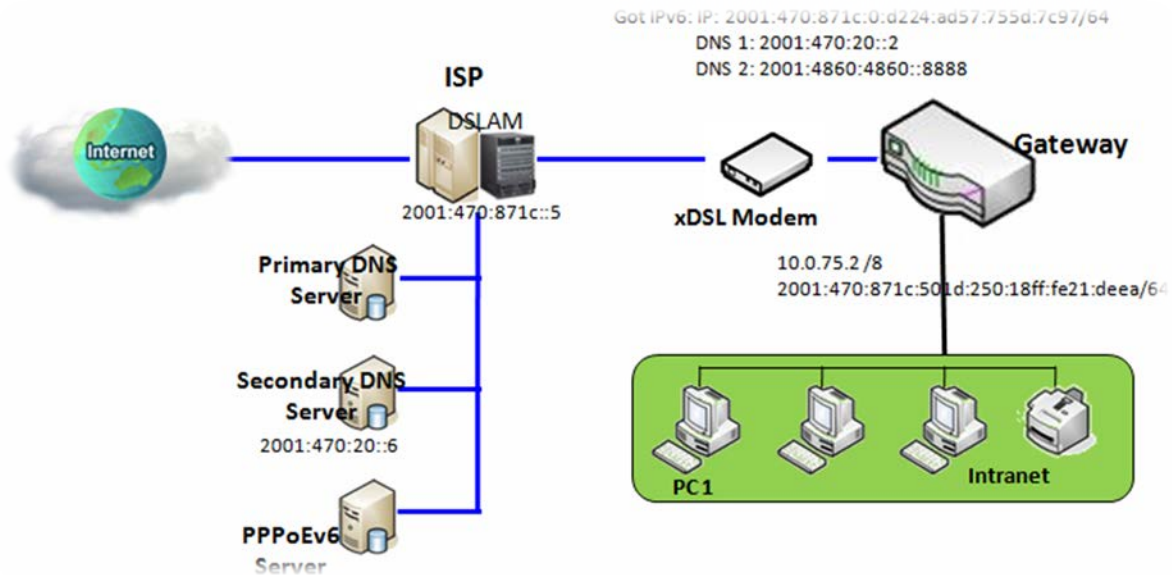

Above diagram depicts DHCP IPv6 IP addressing, the DHCPv6 server on the ISP side assigns IPv6 address, IPv6 default gateway address, and IPv6 DNS to client host's automatically.

# 4G PoE IIoT Gateway

## PPPoEv6

PPPoEv6 in IPv6 does the same function as PPPoE in IPv4. The PPPoEv6 server provides configuration parameters based on PPPoEv6 client request. When PPPoEv6 server gets client request and successfully authenticates it, the server sends IP address, DNS server addresses and other required parameters to automatically configure the client.

The diagram above depicts the IPv6 addressing through PPPoE, PPPoEv6 server (DSLAM) on the ISP side provides IPv6 configuration upon receiving PPPoEv6 client request. When PPPoEv6 server gets client request and successfully authenticates it, the server sends IP address, DNS server addresses and other required parameters to automatically configure the client.

# 4G PoE IIoT Gateway

## IPv6 Configuration Setting

Go to **Basic Network > IPv6 > Configuration** Tab.

The **IPv6 Configuration** setting allows user to set the IPv6 connection type to access the IPv6 network.

IPv6 Configuration	
Item	Setting
▶ IPv6	<input checked="" type="checkbox"/> Enable
▶ WAN Connection Type	DHCPv6 ▼

IPv6 Configuration		
Item	Value setting	Description
IPv6	The box is unchecked by default,	Check the <b>Enable</b> box to activate the IPv6 function.
WAN Connection Type	1. A Must filled setting 2. DHCPv6 is selected by default	Define the selected IPv6 WAN Connection Type to establish the IPv6 connectivity via WAN-1 Interface.  Select <b>Static IPv6</b> when your ISP provides you with a set IPv6 addresses. Select <b>DHCPv6</b> when your ISP provides you with DHCPv6 services. Select <b>PPPoEv6</b> when your ISP provides you with PPPoEv6 account settings.  <b>Note:</b> The available WAN connection types can be different, depending on the Interface type of WAN-1.

## 2.5 Port Forwarding

Network address translation (NAT) is a methodology of remapping one IP address space into another by modifying network address information in Internet Protocol (IP) datagram packet headers while they are in transit across a traffic routing device. The technique was originally used for ease of rerouting traffic in IP networks without renumbering every host. It has become a popular and essential tool in conserving global address space allocations in face of IPv4 address exhaustion. The product you purchased embeds and activates the NAT function. You also can disable the NAT function in **[Basic Network]-[WAN & Uplink]-[Internet Setup]-[WAN Type Configuration]** page.

Usually all local hosts or servers behind corporate gateway are protected by NAT firewall. NAT firewall will filter out unrecognized packets to protect your Intranet. So, all local hosts are invisible to the outside world. Port forwarding or port mapping is function that redirects a communication request from one address and port number combination to assigned one. This technique is most commonly used to make services on a host residing on a protected or masqueraded (internal) network available to hosts on the opposite side of the gateway (external network), by remapping the destination IP address and port number

# 4G PoE IIoT Gateway

## 2.5.1 Configuration

### NAT Loopback

This feature allows you to access the WAN global IP address from your inside NAT local network. It is useful when you run a server inside your network. For example, if you set a mail server at LAN side, your local devices can access this mail server through gateway's global IP address when enable NAT loopback feature. On either side are you in accessing the email server, at the LAN side or at the WAN side, you don't need to change the IP address of the mail server.

### Configuration Setting

Go to **Basic Network > Port Forwarding > Configuration** tab.

The NAT Loopback allows user to access the WAN IP address from inside your local network.

### Enable NAT Loopback

NAT Loopback

Virtual Server List

AddDelete

ID	WAN Interface	Server IP	Source IP	Protocol	Public Port	Private Port	Time Schedule	Enable	Actions
----	---------------	-----------	-----------	----------	-------------	--------------	---------------	--------	---------

Virtual Computer List

AddDelete

ID	Global IP	Local IP	Enable	Actions
----	-----------	----------	--------	---------

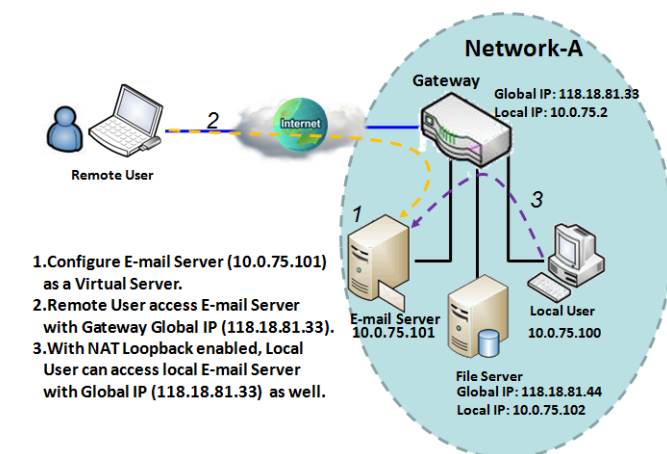

There are some important Pot Forwarding functions implemented within the gateway, including "Virtual Server", "NAT loopback" and "Virtual Computer".

It is necessary for cooperate staffs who travel outside and want to access various servers behind office gateway. You can set up those servers by using "Virtual Server" feature. After trip, if want to access those servers from LAN side by global IP, without change original setting, NAT Loopback can achieve it.

"Virtual computer" is a host behind NAT gateway whose IP address is a global one and is visible to the outside world. Since it is behind NAT, it is protected by gateway firewall. To configure Virtual Computer, you just have to map the local IP of the virtual computer to a global IP.

# 4G PoE IIoT Gateway

## Virtual Server & NAT Loopback

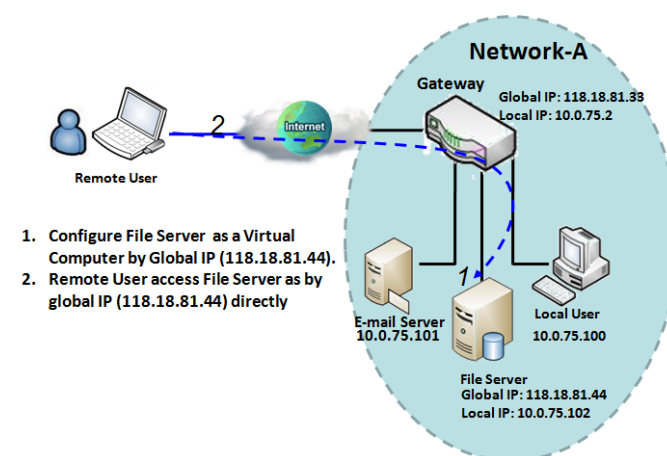

"Virtual Server" allows you to access servers with the global IP address or FQDN of the gateway as if they are servers existed in the Internet. But in fact, these servers are located in the Intranet and are physically behind the gateway. The gateway serves the service requests by port forwarding the requests to the LAN servers and transfers the replies from LAN servers to the requester on the WAN side. As shown in example, an E-mail virtual server is defined to be located at a server with IP address 10.0.75.101 in the Intranet of Network-A, including SMTP service port 25 and POP3 service port 110. So, the remote user can access the E-mail server with the

gateway's global IP 118.18.81.33 from its WAN side. But the real E-mail server is located at LAN side and the gateway is the port forwarder for E-mail service.

NAT Loopback allows you to access the WAN global IP address from your inside NAT local network. It is useful when you run a server inside your network. For example, if you set a mail server at LAN side, your local devices can access this mail server through gateway's global IP address when enable NAT loopback feature. On either side are you in accessing the email server, at the LAN side or at the WAN side, you don't need to change the IP address of the mail server.

## Virtual Computer

"Virtual Computer" allows you to assign LAN hosts to global IP addresses, so that they can be visible to outside world. While so, they are also protected by the gateway firewall as being client hosts in the Intranet. For example, if you set a FTP file server at LAN side with local IP address 10.0.75.102 and global IP address 118.18.82.44, a remote user can access the file server while it is hidden behind the NAT gateway. That is because the gateway takes care of all accessing to the IP address 118.18.82.44, including to forward the access requests to the file server and to send the replies from the server to outside world.

# 4G PoE IIoT Gateway

## Virtual Server & Virtual Computer Setting

Go to **Basic Network > Port Forwarding > Virtual Server & Virtual Computer** tab.

### Enable Virtual Server and Virtual Computer

Configuration		
Item	Setting	
▶ Virtual Server	<input type="checkbox"/> Enable	
▶ Virtual Computer	<input checked="" type="checkbox"/> Enable	

Configuration Item	Value setting	Description
<b>Virtual Server</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this port forwarding function
<b>Virtual Computer</b>	The box is checked by default	Check the <b>Enable</b> box to activate this port forwarding function
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.

### Create / Edit Virtual Server

The gateway allows you to custom your Virtual Server rules. It supports up to a maximum of 20 rule-based Virtual Server sets.

Item	Value setting	Description
<b>WAN Interface</b>	1. A Must filled setting 2. Default is <b>ALL</b> .	Define the selected interface to be the packet-entering interface of the gateway. If the packets to be filtered are coming from <b>WAN-x</b> then select <b>WAN-x</b> for this field. Select <b>ALL</b> for packets coming into the gateway from any interface. It can be selected <b>WAN-x</b> box when <b>WAN-x</b> enabled. <b>Note:</b> The available check boxes ( <b>WAN-1 ~ WAN-4</b> ) depend on the number of WAN interfaces for the product.
<b>Server IP</b>	A Must filled setting	This field is to specify the IP address of the interface selected in the WAN Interface setting above.
<b>Source IP</b>	1. A Must filled setting 2. By default <b>Any</b> is selected	This field is to specify the <b>Source IP address</b> . Select <b>Any</b> to allow the access coming from any IP addresses. Select <b>Specific IP Address</b> to allow the access coming from an IP address. Select <b>IP Range</b> to allow the access coming from a specified range of IP address.
<b>Protocol</b>	1. A Must filled setting 2. <b>TCP &amp; UDP</b> is selected by default.	When <b>"ICMPv4"</b> is selected It means the option "Protocol" of packet filter rule is ICMPv4. Apply <b>Time Schedule</b> to this rule, otherwise leave it as <b>Always</b> . (refer to <b>Scheduling setting</b> under <b>Object Definition</b> ) Then check <b>Enable</b> box to enable this rule.  When <b>"TCP"</b> is selected It means the option "Protocol" of packet filter rule is TCP. <b>Public Port</b> selected a predefined port from <b>Well-known Service</b> , and <b>Private Port</b> is the same with <b>Public Port</b> number. <b>Public Port</b> is selected <b>Single Port</b> and specify a port number, and <b>Private Port</b> can be set a <b>Single Port</b> number. <b>Public Port</b> is selected <b>Port Range</b> and specify a port range, and <b>Private Port</b> can be selected <b>Single Port</b> or <b>Port Range</b> . <u>Value Range:</u> 1 ~ 65535 for Public Port, Private Port.

## 4G PoE IIoT Gateway

When **"UDP"** is selected

It means the option "Protocol" of packet filter rule is UDP.

**Public Port** selected a predefined port from **Well-known Service**, and **Private Port** is the same with **Public Port** number.

**Public Port** is selected **Single Port** and specify a port number, and **Private Port** can be set a **Single Port** number.

**Public Port** is selected **Port Range** and specify a port range, and **Private Port** can be selected **Single Port** or **Port Range**.

Value Range: 1 ~ 65535 for Public Port, Private Port.

When **"TCP & UDP"** is selected

It means the option "Protocol" of packet filter rule is TCP and UDP.

**Public Port** selected a predefined port from **Well-known Service**, and **Private Port** is the same with **Public Port** number.

**Public Port** is selected **Single Port** and specify a port number, and **Private Port** can be set a **Single Port** number.

**Public Port** is selected **Port Range** and specify a port range, and **Private Port** can be selected **Single Port** or **Port Range**.

Value Range: 1 ~ 65535 for Public Port, Private Port.

When **"GRE"** is selected

It means the option "Protocol" of packet filter rule is GRE.

When **"ESP"** is selected

It means the option "Protocol" of packet filter rule is ESP.

When **"SCTP"** is selected

It means the option "Protocol" of packet filter rule is SCTP.

When **"User-defined"** is selected

It means the option "Protocol" of packet filter rule is User-defined.

For **Protocol Number**, enter a port number.

<b>Time Schedule</b>	1. An optional filled setting 2. <b>(0) Always</b> Is selected by default.	Apply Time Schedule to this rule; otherwise leave it as (0) Always. (refer to Scheduling setting under Object Definition)
<b>Rule</b>	1. An optional filled setting 2. The box is unchecked by default.	Check the Enable box to activate the rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click the <b>X</b> button to cancel the settings and return to previous page.

## 2.5.3 DMZ & Pass Through

DMZ (De Militarized Zone) Host is a host that is exposed to the Internet cyberspace but still within the protection of firewall by gateway device. So, the function allows a computer to execute 2-way communication for Internet games, Video conferencing, Internet telephony and other special applications. In some cases when a specific application is blocked by NAT mechanism, you can indicate that LAN computer as a DMZ host to solve this problem.

The DMZ function allows you to ask the gateway pass through all normal packets to the DMZ host behind the NAT gateway only when these packets are not expected to receive by applications in the gateway or by other client hosts in the Intranet. Certainly, the DMZ host is also protected by the gateway firewall. Activate the feature and specify the DMZ host with a host in the Intranet when needed.

Configuration	
Item	Setting
DMZ	<input checked="" type="checkbox"/> Enable <input checked="" type="checkbox"/> All <input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 <input type="checkbox"/> WAN-3 <input type="checkbox"/> WAN-4 DMZ Host : <input type="text" value="10.0.75.100"/>
Pass Through Enable	<input checked="" type="checkbox"/> IPSec <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> L2TP

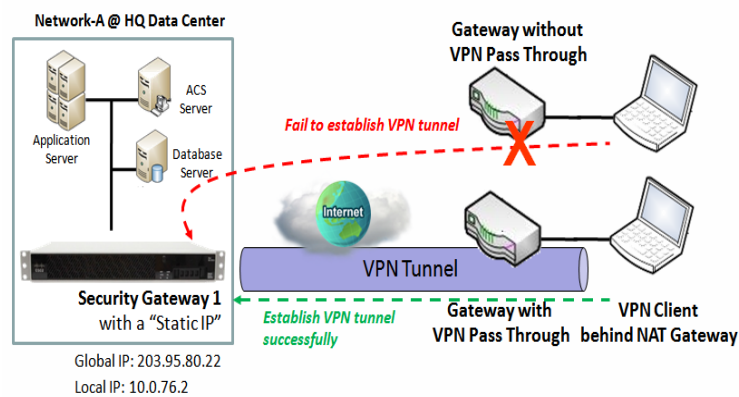

### DMZ Scenario

When the network administrator wants to set up some service daemons in a host behind NAT gateway to allow remote users request for services from server actively, you just have to configure this host as DMZ Host. As shown in the diagram, there is an X server installed as DMZ host, whose IP address is 10.0.75.100. Then, remote user can request services from X server just as it is provided by the gateway whose global IP address is 118.18.81.33. The gateway will forward those packets, not belonging to any configured virtual server or applications, directly to the DMZ host.

# 4G PoE IIoT Gateway

## VPN Pass through Scenario

Since VPN traffic is different from that of TCP or UDP connection, it will be blocked by NAT gateway. To support the pass through function for the VPN connections initiating from VPN clients behind NAT gateway, the gateway must implement some kind of VPN pass through function for such application. The gateway support the pass through function for IPSec, PPTP, and L2TP connections, you just have to check the corresponding checkbox to activate it.

## DMZ & Pass Through Setting

Go to **Basic Network > Port Forwarding > DMZ & Pass Through** tab.

The DMZ host is a host that is exposed to the Internet cyberspace but still within the protection of firewall by gateway device.

### Enable DMZ and Pass Through

Configuration	
Item	Setting
DMZ	<input type="checkbox"/> Enable <input checked="" type="checkbox"/> All <input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 <input type="checkbox"/> WAN-3 <input type="checkbox"/> WAN-4 DMZ Host : <input type="text"/>
Pass Through Enable	<input checked="" type="checkbox"/> IPSec <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> L2TP

Configuration Item	Value setting	Description
DMZ	1. A Must filled setting 2. Default is <b>ALL</b> .	Check the <b>Enable</b> box to activate the DMZ function Define the selected interface to be the packet-entering interface of the gateway, and fill in the IP address of Host LAN IP in <b>DMZ Host</b> field  If the packets to be filtered are coming from <b>WAN-x</b> then select <b>WAN-x</b> for this field. Select <b>ALL</b> for packets coming into the router from any interfaces. It can be selected <b>WAN-x</b> box when <b>WAN-x</b> enabled.

## 4G PoE IIoT Gateway

---

		<b>Note:</b> The available check boxes ( <b>WAN-1 ~ WAN-4</b> ) depend on the number of WAN interfaces for the product.
Pass Through Enable	The boxes are checked by default	Check the box to enable the pass through function for the <b>IPSec</b> , <b>PPTP</b> , and <b>L2TP</b> . With the pass through function enabled, the VPN hosts behind the gateway still can connect to remote VPN servers.
Save	N/A	Click the <b>Save</b> button to save the settings.

## 4G PoE IIoT Gateway

---

### 2.5.4 Special AP & ALG (not supported)

Not supported feature for the purchased product, leave it as blank.

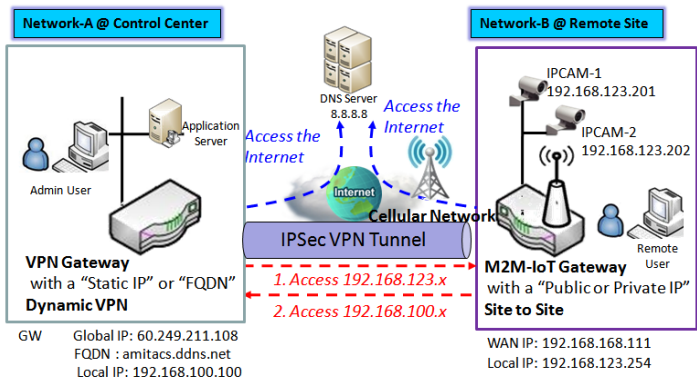

# 4G PoE IIoT Gateway

## 2.5.5 IP Translation

IP Translation is slimmer to One-to-One NAT. it is a feature where you can configure the gateway with multiple IP addresses issued by your Internet Service Provider (ISP) and map them to individual intranet devices with specific IP addresses. That is, configuring the IP Translation feature creates a one-to-one mapping between a public IP address and a private IP address of a local host. In addition, admin users also map a private IP address range to a public IP address range of equal instances.

This feature offers another way to make systems behind a firewall and configured with private IP addresses appear to have public IP addresses.

IP Translation <span>Add</span> <span>Delete</span>								
ID	Mapping Source IP/Domain Name	Mask	Mapping Destination IP/Domain Name	Mask	Physical interface	Description	Enable	Actions
1	1.1.1.8	255.255.255.255	8.8.8.8	255.255.255.255	All	DNS Server	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> Select
2	1.1.1.201	255.255.255.255	192.168.123.201	255.255.255.255	All	Remote IPCam-1	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> Select
3	1.1.1.202	255.255.255.255	192.168.123.202	255.255.255.255	All	Remote IPCam-2	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> Select

As shown in above configuration settings for the VPN gateway at Control Center, the Admin user can access the DNS Server with mapped IP 1.1.1.8, instead of its real IP 8.8.8.8; and he can also access (or manage) the remote IPCams with mapped IP 1.1.1.201 and 1.1.1.202, instead of their real IP 192.168.123.xxx.

- From Control Center to Remote Site**

  - Admin user can ping DNS Server by mapped IP Address 1.1.1.8 instead of 8.8.8.8
  - Admin User in Control Center also can manage remote IPCam via VPN Tunnel directly by mapped IP Address 1.1.1.201 instead of 192.168.123.201  
IP Address 1.1.1.202 instead of 192.168.123.202
- From Remote Site to Control Center**

  - Remote User can manage remote VPN Gateway, GUI,SSH directly by mapped specific IP Address 1.1.1.1 instead of FQDN amitacs.ddns.net

# 4G PoE IIoT Gateway

## IP Translation Setting

Go to **Basic Network > Port Forwarding > IP Translation** tab.

### Enable IP Translation

Configuration	
Item	Setting
▶ IP Translation	<input type="checkbox"/> Enable

Configuration Item	Value setting	Description
<b>IP Translation</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the IP translation function
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.

### Create / Edit IP Translation Rule

When **Add** button is applied, **IP Translation Configuration** screen will appear.

IP Translation Configuration	
Item	Setting
▶ Mapping Source IP/Domain Name	IP <input type="text"/>
▶ Mask	255.255.255.255 (/32) ▼
▶ Mapping Destination IP/Domain Name	IP <input type="text"/>
▶ Mask	255.255.255.255 (/32) ▼
▶ Physical Interface	All ▼
▶ Description	<input type="text"/>
▶ Enable	<input type="checkbox"/>

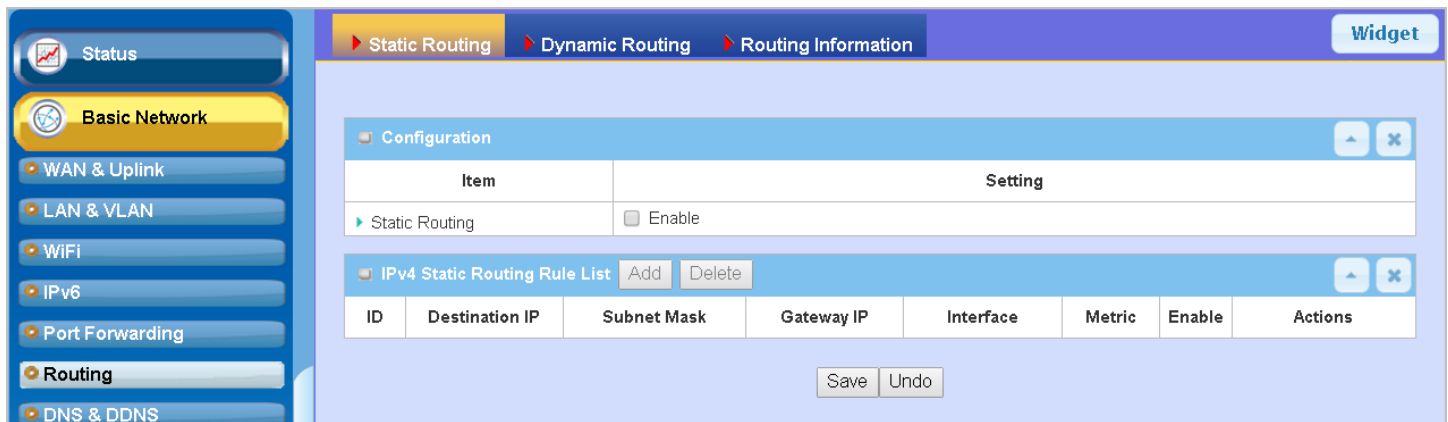

IP Translation Configuration Item	Value setting	Description
<b>Mapping Source IP/Domain Name</b>	1. A Must filled setting 2. IP is selected by default.	Specify the mapped <b>IP / Domain Name</b> that will be issued from the hosts behind the NAT gateway. The NAT gateway will translate the specified source IP/Domain Name into other real IP / Domain Name that might be in the Internet or Intranet.
<b>Mask</b>	1. A Must filled setting 2. 255.255.255.255 (/32) is	Enter the required subnet mask if <b>Source IP</b> is specified above. It can be a single IP with 255.255.255.255 (/32) subnet mask, or an IP group

## 4G PoE IIoT Gateway

	selected by default.	limited with proper subnet setting.
<b>Mapping Destination IP/Domain Name</b>	1. A Must filled setting 2. <b>IP</b> is selected by default.	Specify the expected real target IP / <b>Domain Name</b> that will be used to replace the original one that is issued by the hosts behind the NAT gateway.
<b>Mask</b>	1. A Must filled setting 2. <b>255.255.255.255(/32)</b> is selected by default.	Enter the required subnet mask if <b>Destination IP</b> is specified above. It can be a single IP with 255.255.255.255 (/32) subnet mask, or an IP group limited with proper subnet setting.
<b>Physical Interface</b>	1. A Must filled setting 2. <b>All</b> is selected by default.	Specify the interface to apply the translation rule. The enabled WAN Interface will be available in the dropdown list. By default, <b>All</b> is selected, and the translation rule will be applied to the traffics passing through all WAN interfaces.
<b>Description</b>	An optional setting.	Specify a brief description or rule name for this IP Translation rule.
<b>Enable</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the translation rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings

## 2.6 Routing

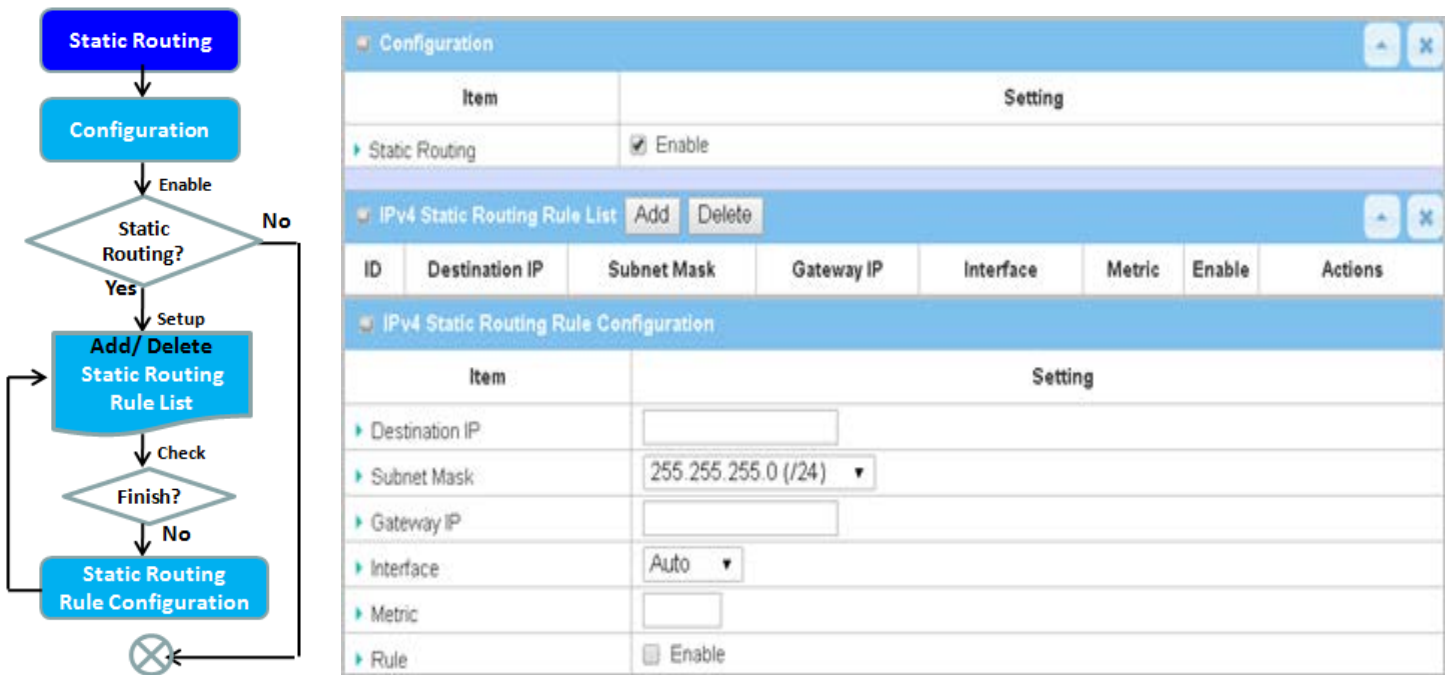

If you have more than one router and subnet, you will need to enable routing function to allow packets to find proper routing path and allow different subnets to communicate with each other. Routing is the process of selecting best paths in a network. It is performed for many kinds of networks, like electronic data networks (such as the Internet), by using packet switching technology. The routing process usually directs forwarding on the basis of routing tables which maintain a record of the routes to various network destinations. Thus, constructing routing tables, which are held in the router's memory, is very important for efficient routing. Most routing algorithms use only one network path at a time.

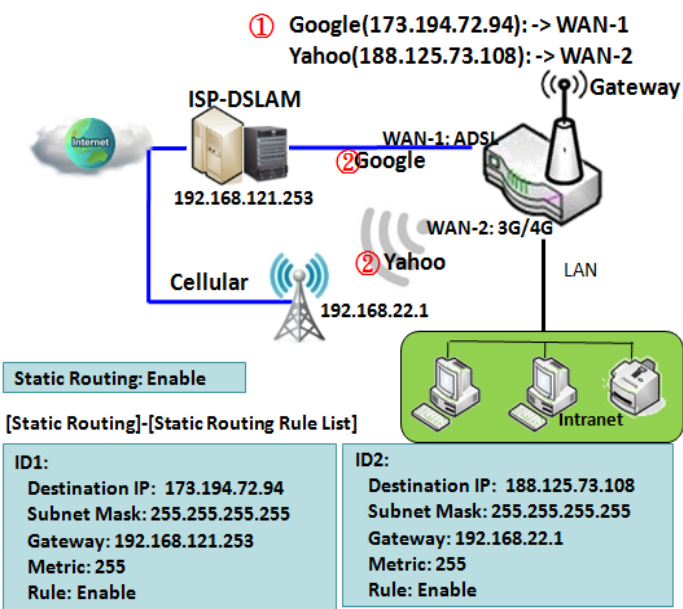

The routing tables record your pre-defined routing paths for some specific destination subnets. It is **static routing**. However, if the contents of routing tables record the obtained routing paths from neighbor routers by using some protocols, such as RIP, OSPF and BGP. It is **dynamic routing**. These both routing approaches will be illustrated one after one. In addition, the gateway also built in one advanced configurable routing software Quagga for more complex routing applications, you can configure it if required via Telnet CLI.

# 4G PoE IIoT Gateway

## 2.6.1 Static Routing

"Static Routing" function lets you define the routing paths for some dedicated hosts/servers or subnets to store in the routing table of the gateway. The gateway routes incoming packets to different peer gateways based on the routing table. You need to define the static routing information in gateway routing rule list.

When the administrator of the gateway wants to specify what kinds of packets to be transferred via which gateway interface and which peer gateway to their destination. It can be carried out by the "Static Routing" feature. Dedicated packet flows from the Intranet will be routed to their destination via the pre-defined peer gateway and corresponding gateway interface that are defined in the system routing table by manual.

As shown in the diagram, when the destination is Google access, rule 1 set interface as ADSL, routing gateway as IP-DSLAM gateway 192.168.121.253. All the packets to Google will go through WAN-1. And the same way applied to rule 2 of access Yahoo. Rule 2 sets 3G/4G as interface.

# 4G PoE IIoT Gateway

## Static Routing Setting

Go to **Basic Network** > **Routing** > **Static Routing** Tab.

There are three configuration windows for static routing feature, including "Configuration", "Static Routing Rule List" and "Static Routing Rule Configuration" windows. "Configuration" window lets you activate the global static routing feature. Even there are already routing rules, if you want to disable routing temporarily, just uncheck the Enable box to disable it. "Static Routing Rule List" window lists all your defined static routing rule entries. Using "Add" or "Edit" button to add and create one new static routing rule or to modify an existed one.

When "**Add**" or "**Edit**" button is applied, the "Static Routing Rule Configuration" window will appear to let you define a static routing rule.

### Enable Static Routing

Just check the **Enable** box to activate the "Static Routing" feature.

Configuration			
Item	Setting		
Static Routing	<input checked="" type="checkbox"/> Enable		

Static Routing Item	Value setting	Description
Static Routing	The box is unchecked by default	Check the <b>Enable</b> box to activate this function

### Create / Edit Static Routing Rules

The Static Routing Rule List shows the setup parameters of all static routing rule entries. To configure a static routing rule, you must specify related parameters including the destination IP address and subnet mask of dedicated host/server or subnet, the IP address of peer gateway, the metric and the rule activation.

IPv4 Static Routing Rule List									
		Add	Delete						
ID	Destination IP	Subnet Mask	Gateway IP	Interface	Metric	Enable	Actions		

The gateway allows you to custom your static routing rules. It supports up to a maximum of 64 rule sets. When **Add** button is applied, **Static Routing Rule Configuration** screen will appear, while the **Edit** button at the end

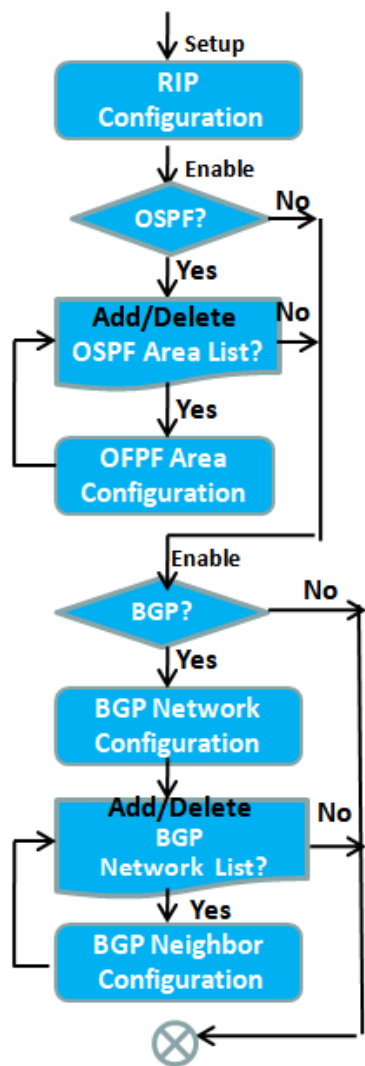

## 4G PoE IIoT Gateway

of each static routing rule can let you modify the rule.

IPv4 Static Routing Rule Configuration		
Item	Setting	
▶ Destination IP	<input type="text"/>

Dynamic Routing, also called adaptive routing, describes the capability of a system, through which routes are characterized by their destination, to alter the path that the route takes through the system in response to a change in network conditions.

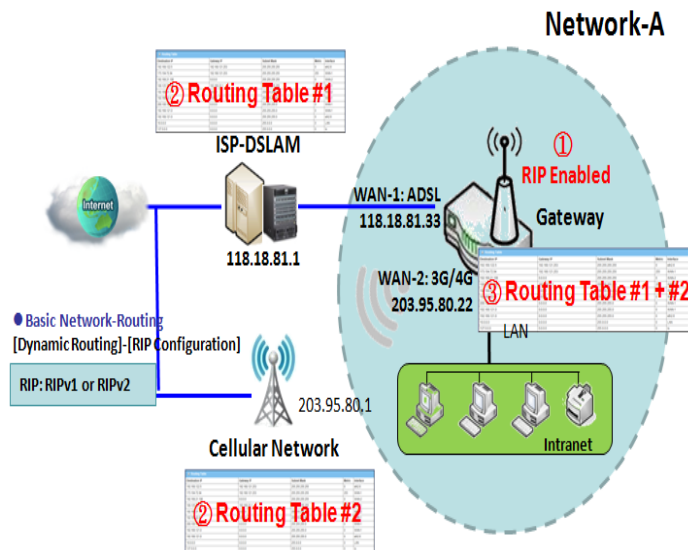

This gateway supports dynamic routing protocols, including RIPv1/RIPv2 (Routing Information Protocol), OSPF (Open Shortest Path First), and BGP (Border Gateway Protocol), for you to establish routing table automatically. The feature of dynamic routing will be very useful when there are lots of subnets in your network. Generally speaking, RIP is suitable for small network. OSPF is more suitable for medium network. BGP is more used for big network infrastructure.

The supported dynamic routing protocols are described as follows.

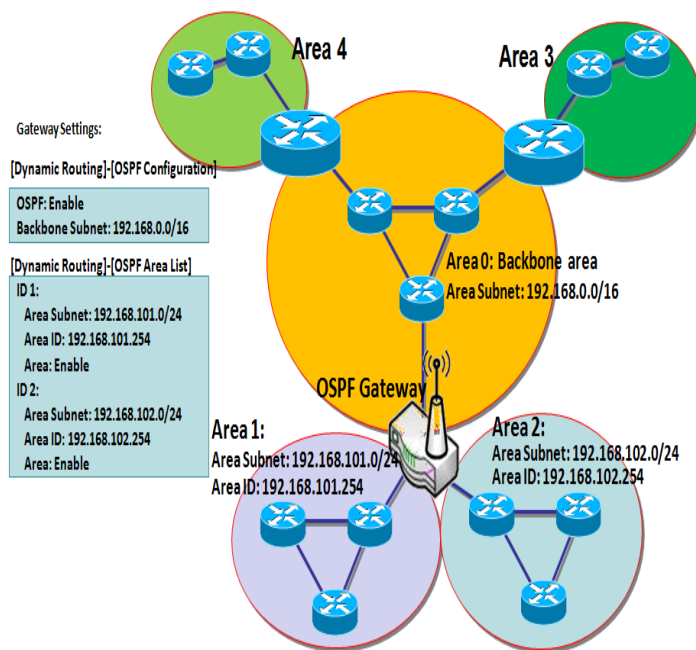

# 4G PoE IIoT Gateway

## RIP Scenario

The Routing Information Protocol (RIP) is one of the oldest distance-vector routing protocols, which employs the hop count as a routing metric. RIP prevents routing loops by implementing a limit on the number of hops allowed in a path from the source to a destination. The maximum number of hops allowed for RIP is 15. This hop limit, however, also limits the size of networks that RIP can support. A hop count of 16 is considered an infinite distance, in other words the route is considered unreachable. RIP implements the split horizon, route poisoning and hold-down mechanisms to prevent incorrect routing information from being propagated.

## OSPF Scenario

Open Shortest Path First (OSPF) is a routing protocol that uses link state routing algorithm. It is the most widely used interior gateway protocol (IGP) in large enterprise networks. It gathers link state information from available routers and constructs a topology map of the network. The topology is presented as a routing table which routes datagrams based solely on the destination IP address.

Network administrator can deploy OSPF gateway in large enterprise network to get its routing table from the enterprise backbone, and forward routing information to other routers, which are not linked to the enterprise backbone. Usually, an OSPF network is subdivided into routing areas to simplify administration and optimize traffic and resource utilization.

As shown in the diagram, OSPF gateway gathers routing information from the backbone gateways in area 0, and will forward its routing information to the routers in area 1 and area 2 which are not in the backbone.

# 4G PoE IIoT Gateway

## BGP Scenario

Border Gateway Protocol (BGP) is a standard exterior gateway protocol designed to exchange routing and reachability information between autonomous systems (AS) on the Internet. It usually makes routing decisions based on paths, network policies, or rule-sets.

Most ISPs use BGP to establish routing between one another (especially for multi-homed). Very large private IP networks also use BGP internally. The major BGP gateway within one AS will link with some other border gateways for exchanging routing information. It will distribute the collected data in AS to all routers in other AS.

As shown in the diagram, BGP 0 is gateway to dominate AS0 (self IP is 10.100.0.1 and self ID is 100). It links with other BGP gateways in the Internet. The scenario is like Subnet in one ISP to be linked with the ones in other ISPs. By operating with BGP protocol, BGP 0 can gather routing information from other BGP gateways in the Internet. And then it forwards the routing data to the routers in its dominated AS. Finally, the routers resided in AS 0 know how to route packets to other AS.

# 4G PoE IIoT Gateway

## Dynamic Routing Setting

Go to **Basic Network > Routing > Dynamic Routing** Tab.

The dynamic routing setting allows user to customize RIP, OSPF, and BGP protocol through the router based on their office setting.

In the "Dynamic Routing" page, there are several configuration windows for dynamic routing feature. They are the "RIP Configuration" window, "OSPF Configuration" window, "OSPF Area List", "OSPF Area Configuration", "BGP Configuration", "BGP Neighbor List" and "BGP Neighbor Configuration" window. RIP, OSPF and BGP protocols can be configured individually.

The "RIP Configuration" window lets you choose which version of RIP protocol to be activated or disable it. The "OSPF Configuration" window can let you activate the OSPF dynamic routing protocol and specify its backbone subnet. Moreover, the "OSPF Area List" window lists all defined areas in the OSPF network. However, the "BGP Configuration" window can let you activate the BGP dynamic routing protocol and specify its self ID. The "BGP Neighbor List" window lists all defined neighbors in the BGP network.

### RIP Configuration

The RIP configuration setting allows user to customize RIP protocol through the router based on their office setting.

RIP Configuration

Item	Setting
▶ RIP Enable	Disable

RIP Configuration		
Item	Value setting	Description
RIP Enable	Disable is set by default	Select <b>Disable</b> will disable RIP protocol. Select <b>RIP v1</b> will enable RIPv1 protocol. Select <b>RIP v2</b> will enable RIPv2 protocol.

### OSPF Configuration

The OSPF configuration setting allows user to customize OSPF protocol through the router based on their office setting.

# 4G PoE IIoT Gateway

OSPF Configuration

Item	Setting
▶ OSPF	<input type="checkbox"/> Enable
▶ Router ID	<input type="text"/>
▶ Authentication	<div>None</div>
▶ Backbone Subnet	<input type="text"/>

OSPF Configuration		
Item	Value setting	Description
OSPF	Disable is set by default	Click <b>Enable</b> box to activate the OSPF protocol.
Router ID	1. IPv4 Format 2. A Must filled setting	The Router ID of this router on OSPF protocol
Authentication	None is set by default	The Authentication method of this router on OSPF protocol. Select <b>None</b> will disable Authentication on OSPF protocol. Select <b>Text</b> will enable Text Authentication with entered the Key in this field on OSPF protocol. Select <b>MD5</b> will enable MD5 Authentication with entered the ID and Key in these fields on OSPF protocol.
Backbone Subnet	1. Classless Inter Domain Routing (CIDR) Subnet Mask Notation. (Ex: 192.168.1.0/24) 2. A Must filled setting	The Backbone Subnet of this router on OSPF protocol.

## Create / Edit OSPF Area Rules

The gateway allows you to custom your OSPF Area List rules. It supports up to a maximum of 32 rule sets.

OSPF Area List

AddDelete

ID	Area Subnet	Area ID	Enable	Actions
----	-------------	---------	--------	---------

When **Add** button is applied, **OSPF Area Rule Configuration** screen will appear.

Source IP	N/A	Policy Routing of Source IP. IPv4 Format.
Destination IP	N/A	Policy Routing of Destination IP. IPv4 Format.
Destination Port	N/A	Policy Routing of Destination Port. String Format.
WAN Interface	N/A	Policy Routing of WAN Interface. String Format.

## 2.7 DNS & DDNS

How does user access your server if your WAN IP address changes all the time? One way is to register a new domain name, and maintain your own DNS server. Another simpler way is to apply a domain name to a third-party DDNS service provider. The service can be free or charged. If you want to understand the basic concepts of DNS and Dynamic DNS, you can refer to Wikipedia website<sup>5,6</sup>.

### 2.7.1 DNS & DDNS Configuration

#### Dynamic DNS

To host your server on a changing IP address, you have to use dynamic domain name service (DDNS). Therefore, anyone wishing to reach your host only needs to know the domain name. Dynamic DNS will map the name of your host to your current IP address, which changes each time you connect your Internet service provider.

The Dynamic DNS service allows the gateway to alias a public dynamic IP address to a static domain name, allowing the gateway to be more easily accessed from various locations on the Internet. As shown in the diagram, user registered a domain name to a

third-party DDNS service provider (NO-IP) to use DDNS function. Once the IP address of designated WAN interface has changed, the dynamic DNS agent in the gateway will inform the DDNS server with the new IP address. The server automatically re-maps your domain name with the changed IP address. So, other hosts or remote users in the Internet world are able to link to your gateway by using your domain name regardless of the changing global IP address.

5 [http://en.wikipedia.org/wiki/Domain\\_Name\\_System](http://en.wikipedia.org/wiki/Domain_Name_System)

6 [http://en.wikipedia.org/wiki/Dynamic\\_DNS](http://en.wikipedia.org/wiki/Dynamic_DNS)

# 4G PoE IIoT Gateway

## DNS & DDNS Setting

Go to **Basic Network > DNS & DDNS > Configuration** Tab.

The DNS & DDNS setting allows user to setup Dynamic DNS feature and DNS redirect rules.

### Setup Dynamic DNS

The gateway allows you to custom your Dynamic DNS settings.

Dynamic DNS	
Item	Setting
▶ DDNS	<input type="checkbox"/> Enable
▶ WAN Interface	WAN-1
▶ Provider	DynDNS.org(Dynamic)
▶ Host Name	
▶ User Name / E-Mail	
▶ Password / Key	

DDNS (Dynamic DNS) Configuration		
Item	Value setting	Description
DDNS	The box is unchecked by default	Check the <b>Enable</b> box to activate this function.
WAN Interface	WAN 1 is set by default	Select the WAN Interface IP Address of the gateway.
Provider	DynDNS.org (Dynamic) is set by default	Select your DDNS provider of Dynamic DNS. It can be <b>DynDNS.org(Dynamic)</b> , <b>DynDNS.org(Custom)</b> , <b>NO-IP.com</b> , etc...
Host Name	1. String format can be any text 2. A Must filled setting	Your registered host name of Dynamic DNS. <b><u>Value Range:</u> 0 ~ 63 characters.</b>
User Name / E-Mail	1. String format can be any text 2. A Must filled setting	Enter your User name or E-mail addresss of Dynamic DNS.
Password / Key	1. String format can be any text 2. A Must filled setting	Enter your Password or Key of Dynamic DNS.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Setup DNS Redirect

DNS redirect is a special function to redirect certain traffics to a specified host. Administator can manage the internet / intranet traffics that are going to access some restricted DNS and force those traffics to be redirected to a specified host.

DNS Redirect

Item	Setting
DNS Redirect	<input type="checkbox"/> Enable

DNS Redirect Configuration

Item	Value setting	Description
DNS Redirect	The box is unchecked by default	Check the <b>Enable</b> box to activate this function.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

If you enabled the DNS Redirect function, you have to further specify the redirect rules. According to the rules, the gateway can redirect the traffic that matched the DNS to corresponding pre-defined IP address.

Redirect Rule

AddDelete

ID	Mapping Rule	Condition	Description	Enable	Action
----	--------------	-----------	-------------	--------	--------

When **Add** button is applied, **Redirect Rule** screen will appear.

Redirect Rule

Save

Item	Setting				
Mapping Rule	<table><thead><tr><th>Domain Name</th><th>IP</th></tr></thead><tbody><tr><td><input type="text"/> (* for Any)</td><td><input type="text"/></td></tr></tbody></table>	Domain Name	IP	<input type="text"/> (* for Any)	<input type="text"/>

Enable	<input type="checkbox"/> Enable				

Redirect Rule Configuration

Item	Value setting	Description
Domain Name	1. String format can be any text	Enter a domain name to be redirect. The traffic to specified domain name will be redirect to the following IP address.

## 4G PoE IIoT Gateway

	2. A Must filled setting	<b><u>Value Range:</u></b> at least 1 character is required; '*' for any.
<b>IP</b>	1. IPv4 format 2. A Must filled setting	Enter an IP Address as the target for the DNS redirect.
<b>Condition</b>	1. A Must filled setting 2. <b>Always is selected by default.</b>	Specify when will the DNS redirect action can be applied. It can be <b>Always</b> , or <b>WAN Block</b> . <b>Always:</b> The DNS redirect function can be applied to matched DNS all the time. <b>WAN Block:</b> The DNS redirect function can be applied to matched DNS only when the WAN connection is disconnected, or un-reachable.
<b>Description</b>	1. String format can be any text 2. A Must filled setting	Enter a brief description for this rule. <b><u>Value Range:</u></b> 0 ~ 63 characters.
<b>Enable</b>	The box is unchecked by default	Click the <b>Enable</b> button to activate this rule.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## 2.8 QoS

The total amount of data traffic increases nowadays as the higher demand of mobile applications, like Game / Chat / VoIP / P2P / Video / Web access. In order to pose new requirements for data transport, e.g. low latency, low data loss, the entire network must ensure them via a connection service guarantee.

The main goal of QoS (Quality of Service) is prioritizing incoming data, and preventing data loss due to factors such as jitter, delay and dropping. Another important aspect of QoS is ensuring that prioritizing one data flow doesn't interfere with other data flows. So, QoS helps to prioritize data as it enters your router. By attaching special identification marks or headers to incoming packets, QoS determines which queue the packets enter, based on priority. This is useful when there are certain types of data you want to give higher priority to, such as voice packets given higher priority than Web data packets.

To utilize your network throughput completely, administrator must define bandwidth control rules carefully to balance the utilization of network bandwidth for all users to access. It is indeed required that an access gateway satisfies the requirements of latency-critical applications, minimum access right guarantee, fair bandwidth usage for same subscribed condition and flexible bandwidth management. AMIT Security Gateway provides a Rule-based QoS to carry out the requirements.

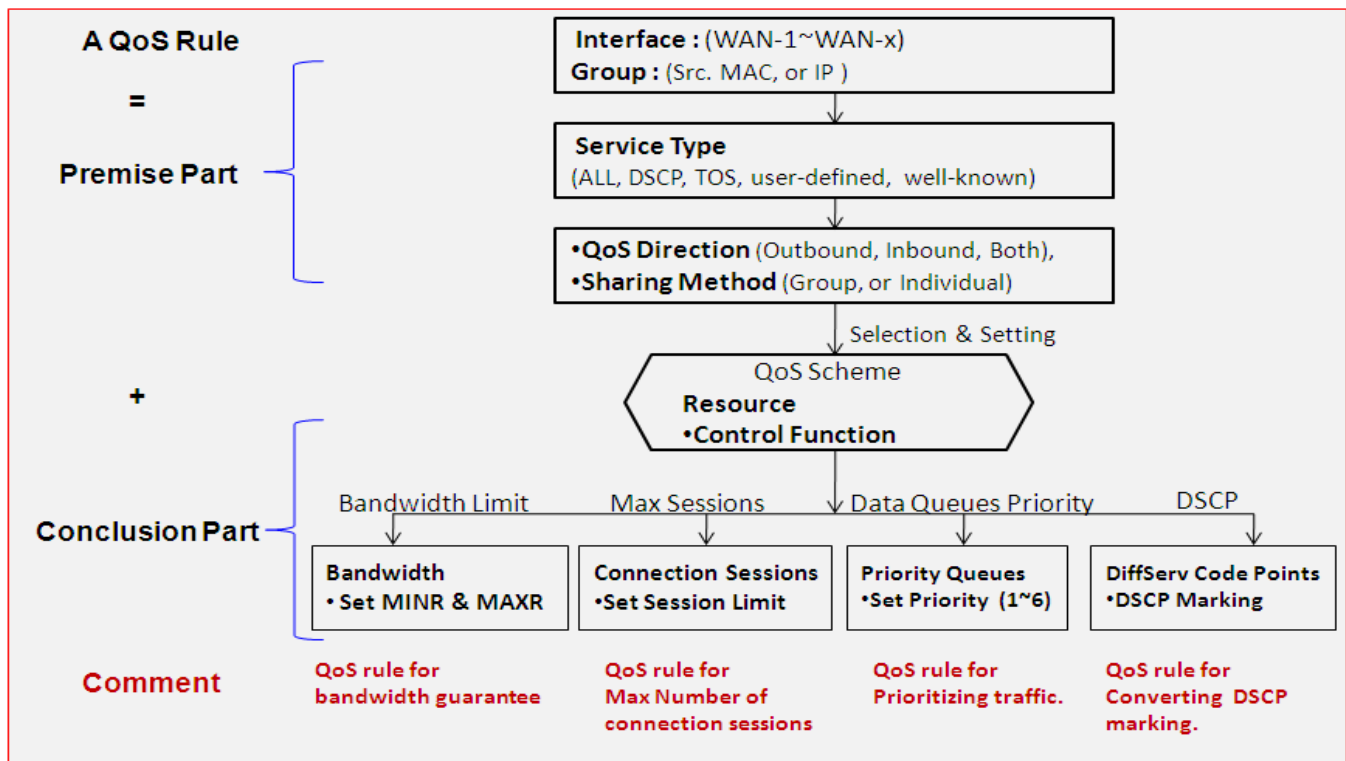

### 2.8.1 QoS Configuration

This gateway provides lots of flexible rules for you to set QoS policies. Basically, you need to know three parts of information before you create your own policies. First, "who" needs to be managed? Second, "what" kind of service needs to be managed? The last part is "how" you prioritize. Once you have this information, you can continue to learn functions in this section in more detail.

#### [QoS Rule Configuration](#)

When you want to add a new QoS rule or edit one already existed, the "QoS Rule Configuration" window shows up for you to configure. The parameters in a rule include the applied WAN interfaces, the dedicated host group based on MAC address or IP address, the dedicated kind of service packets, the system resource to be distributed, the corresponding control function for your specified resource, the packet flow direction, the sharing method for the control function, the integrated time schedule rule and the rule activation. Following diagram illustrates how to organize a QoS rule.

# 4G PoE IIoT Gateway

In above diagram, a QoS rule is organized by the premise part and the conclusion part. In the premise part, you must specify the WAN interface, host group, service type in the packets, packet flow direction to be watched and the sharing method of group control or individual control. However, in the conclusion part, you must make sure which kind of system resource to distribute and the control function based on the chosen system resource for the rule.

The Rule-based QoS has following features.

## Multiple Group Categories

Specify the group category in a QoS rule for the target objects to be applied on.

Group Category can be based on VLAN ID, MAC Address, IP Address, Host Name or Packet Length.

## Differentiated Services

Specify the service type in a QoS rule for the target packets to be applied on.

Differentiated services can be based on 802.1p, DSCP, TOS, VLAN ID, User-defined Services and Well-known Services. Well-known services include FTP(21), SSH(TCP:22), Telnet(23), SMTP(25), DNS(53), TFTP(UDP:69), HTTP(TCP:80), POP3(110), Auth(113), SFTP(TCP:115), SNMP&Traps(UDP:161-162), LDAP(TCP:389), HTTPS(TCP:443), SMTPs(TCP:465), ISAKMP(500), RTSP(TCP:554), POP3s(TCP:995), NetMeeting(1720), L2TP(UDP:1701) and PPTP(TCP:1723).

## Available Control Functions

There are 4 resources can be applied in a QoS rule: bandwidth, connection sessions, priority queues and DiffServ Code Point (DSCP). Control function that acts on target objects for specific services of packet flow is based on these resources.

## 4G PoE IIoT Gateway

For bandwidth resource, control functions include guaranteeing bandwidth and limiting bandwidth. For priority queue resource, control function is setting priority. For DSCP resource, control function is DSCP marking. The last resource is Connection Sessions; the related control function is limiting connection sessions.

### Individual / Group Control

One QoS rule can be applied to individual member or whole group in the target group. This feature depends on model.

### Outbound / Inbound Control

One QoS rule can be applied to the outbound or inbound direction of packet flow, even them both. This feature depends on model.

Two QoS rule examples are listed as below.

### QoS Rule Example #1 - Connection Sessions

QoS Rule Configuration	
Item	Setting
▶ Interface	WAN - 1
▶ Group	IP 10.0.75.16 Subnet Mask : 255.255.255.240 (/28)
▶ Service	All
▶ Queue Outbound	N/A
▶ Queue Inbound	N/A
▶ Time Schedule	(0) Always
▶ Rule Enable	<input checked="" type="checkbox"/> Enable

When administrator wants to limit maximum connection sessions from some client hosts (IP 10.0.75.16~31) to 20000 to avoid resource unbalanced, he can setup this rule as above configuration.

This rule defines that all client hosts, whose IP address is in the range of 10.0.75.16~31, can access the Internet via "WAN-1" interface under the limitation of the maximum 20000 connection sessions totally at any time

# 4G PoE IIoT Gateway

## QoS Rule Example #2 – DifferServ Code Points

QoS Rule Configuration	
Item	Setting
▶ Interface	All WANs ▾
▶ Group	IP ▾ 10.0.75.196 Subnet Mask : 255.255.255.252 (/30) ▾
▶ Service	DSCP ▾ ▶ DiffServ CodePoint IP Precedence 4(CS4) ▾
▶ Queue Outbound	N/A
▶ Queue Inbound	N/A
▶ Time Schedule	(0) Always ▾
▶ Rule Enable	<input checked="" type="checkbox"/> Enable

When the administrator of the gateway wants to convert the code point value, "IP Precedence 4(CS4)", in the packets from some client hosts (IP 10.0.75.196~199) to the code value, "AF Class2(High Drop)", he can use the "Rule-based QoS" function to carry out this rule by defining an QoS rule as shown in above configuration. Under such configuration, all packets from WAN interfaces to LAN IP address 10.0.75.196 ~ 10.0.75.199 which have DiffServ code points with "IP Precedence 4(CS4)" value will be modified by "DSCP Marking" control function with "AF Class 2(High Drop)" value at any time.

# 4G PoE IIoT Gateway

## QoS Configuration Setting

Go to **Basic Network > QoS > Configuration** tab.

In "QoS Configuration" page, there are some configuration windows for QoS function. They are the "Configuration" window, "System Resource Configuration" window, "QoS Rule List" window, and "QoS Rule Configuration" window.

The "Configuration" window can let you activate the Rule-based QoS function. In addition, you can also enable the "Flexible Bandwidth Management" (FBM) feature for better utilization of system bandwidth by FBM algorithm. Second, the "System Configuration" window can let you configure the total bandwidth and session of each WAN. Third, the "QoS Rule List" window lists all your defined QoS rules. At last, the "QoS Rule Configuration" window can let you define one QoS rule.

### Enable QoS Function

Configuration	
Item	Setting
▶ QoS Types	Software <input type="checkbox"/> Enable
▶ Flexible Bandwidth Management	<input type="checkbox"/> Enable

Configuration Item	Value Setting	Description
QoS Type	1. <b>Software</b> is selected by default. 2. The box is unchecked by default.	Select the QoS Type from the dropdown list, and then click <b>Enable</b> box to activate the QoS function. The default QoS type is set to <b>Software</b> QoS. For some models, there is another option for <b>Hardware</b> QoS.
Flexible Bandwidth Management	The box is unchecked by default	Click <b>Enable</b> box to activate the Flexible Bandwidth Management function.
Save	N/A	Click the <b>Save</b> button to save the settings.

Check the "Enable" box to activate the "Rule-based QoS" function. Also enable the Flexible Bandwidth Management (FBM) feature when needed. When FBM is enabled, system adjusts the bandwidth distribution dynamically based on current bandwidth usage situation to reach maximum system network performance while transparent to all users. Certainly, the bandwidth subscription profiles of all current users are considered in system's automatic adjusting algorithm.

# 4G PoE IIoT Gateway

## Setup System Resource

System Resource Configuration

Item	Setting
Type of System Queue	Bandwidth Queue 6 (1~6)
WAN Interface	WAN - 1

WAN Interface Resource

Item	Setting
Bandwidth of Upstream	100 Mbps
Bandwidth of Downstream	100 Mbps
Total Connection Sessions	30000 (1~100000)

System Resource Configuration		
Item	Value Setting	Description
Type of System Queue	1. A Must filled setting. 2. <b>Bandwidth Queue</b> , and 6 are set by default.	Define the system queues that are available for the QoS settings. The supported type of system queues are <b>Bandwidth Queue</b> and <b>Priority Queues</b> . <b>Value Range:</b> 1 ~ 6.
WAN Interface	<b>WAN-1</b> is selected by default.	Select the WAN interface and then the following <b>WAN Interface Resource</b> screen will show the related resources for configuration. <ul style="list-style-type: none"><li>● <b>Bandwidth of Upstream / Downstream</b> Specify total upload / download bandwidth of the selected WAN. <b>Value Range:</b> For Gigabit Ethernet:1~1024000Kbps, or 1~1000Mbps; For Fast Ethernet: 1~102400Kbps, or 1~100Mbps; For 3G/4G: 1~153600Kbps, or 1~150Mbps.</li><li>● <b>Total Connection Sessions</b> Specify total connection sessions of the selected WAN. <b>Value Range:</b> 1 ~ 10000.</li></ul>
Save	N/A	Click the <b>Save</b> button to save the settings.

Each WAN interface should be configured carefully for its upstream bandwidth, downstream bandwidth and maximum number of connection sessions.

# 4G PoE IIoT Gateway

## Create / Edit QoS Rules

After enabled the QoS function and configured the system resources, you have to further specify some QoS rules for provide better service on the interested traffics. The gateway supports up to a maximum of 128 rule-based QoS rule sets.

QoS Rule List									↑	×
Interface	Group	Service	Resource	Control Function	Direction	Sharing Method	Time Schedule	Enable	Actions	

When **Add** button is applied, **QoS Rule Configuration** screen will appear.

QoS Rule Configuration	
Item	Setting
▶ Interface	All WANs
▶ Group	Src. MAC Address
▶ Service	All
▶ Resource	Bandwidth
▶ Control Function	Set MINR & MAXR
▶ QoS Direction	Outbound
▶ Time Schedule	(0) Always
▶ Rule Enable	<input type="checkbox"/> Enable

QoS Rule Configuration		
Item	Value setting	Description
Interface	1. A Must filled setting. 2. <b>All WANs</b> is selected by default.	Specify the WAN interface to apply the QoS rule. Select <b>All WANs</b> or a certain <b>WAN-n</b> to filter the packets entering to or leaving from the interface(s).
Group	1. A Must filled setting. 2. <b>Src. MAC Address</b> is selected by default.	Specify the <b>Group</b> category for the QoS rule. It can be <b>Src. MAC Address</b> , <b>IP</b> , or <b>Host Name</b> .  Select <b>Src. MAC Address</b> to prioritize packets based on MAC;  Select <b>IP</b> to prioritize packets based on IP address and Subnet Mask;  Select <b>Host Name</b> to prioritize packets based on a group of a pre-configured group of host from the dropdown list. If the dropdown list is empty, ensure if any group is pre-configured.  <b>Note:</b> The required host groups must be created in advance and corresponding QoS checkbox in the <b>Multiple Bound Services</b> field is checked before the <b>Host</b>

## 4G PoE IIoT Gateway

		<p><b>Group</b> option become available. Refer to <b>Object Definition &gt; Grouping &gt; Host Grouping</b>.</p>
<b>Service</b>	<p>1. A Must filled setting.</p> <p>2. <b>All</b> is selected by default.</p>	<p>Specify the service type of traffics that have to be applied with the QoS rule. It can be <b>All</b>, <b>DSCP</b>, <b>TOS</b>, <b>User-defined Service</b>, or <b>Well-known Service</b>.</p> <p>Select <b>All</b> for all packets.</p> <p>Select <b>DSCP</b> for DSCP type packets only.</p> <p>Select <b>TOS</b> for TOS type packets only. You have to select a service type (<b>Minimize-Cost</b>, <b>Maximize-Reliability</b>, <b>Maximize-Throughput</b>, or <b>Minimize-Delay</b>) from the dropdown list as well.</p> <p>Select <b>User-defined Service</b> for user-defined packets only. You have to define the port range and protocol as well.</p> <p>Select <b>Well-known Service</b> for specific application packets only. You have to select the required service from the dropdown list as well.</p>
<b>Resource, and Control Function</b>	A Must filled setting	<p>Specify the Resource Type and corresponding Control function for the QoS rule. The available Resource options are <b>Bandwidth</b>, <b>Connection Sessions</b>, <b>Priority Queues</b>, and <b>DiffServ Codepoints</b>.</p> <p><b>Bandwidth:</b> Select <b>Bandwidth</b> as the resource type for the QoS Rule, and you have to assign the min rate, max rate and rate unit as the bandwidth settings in the <b>Control Function / Set MINR &amp; MAXR</b> field.</p> <p><b>Connection Sessions:</b> Select <b>Connection Sessions</b> as the resource type for the QoS Rule, and you have to assign supported session number in the <b>Control Function / Set Session Limitation</b> field.</p> <p><b>Priority Queues:</b> Select <b>Priority Queues</b> as the resource type for the QoS Rule, and you have to specify a priority queue in the <b>Control Function / Set Priority</b> field.</p> <p><b>DiffServ Code Points:</b> Select <b>DiffServ Code Points</b> as the resource type for the QoS Rule, and you have to select a DSCP marking from the <b>Control Function / DSCP Marking</b> dropdown list.</p>
<b>QoS Direction</b>	<p>1. A Must filled setting.</p> <p>2. <b>Outbound</b> is selected by default.</p>	<p>Specify the traffic flow direction for the packets to apply the QoS rule. It can be <b>Outbound</b>, <b>Inbound</b>, or <b>Both</b>.</p> <p><b>Outbound:</b> Select <b>Outbound</b> to prioritize the traffics going to the Internet via the specified interface. Under such situation, the hosts specified in the Group field is a source group.</p> <p><b>Inbound:</b> Select <b>Inbound</b> to prioritize the traffics coming from the Internet via the specified interface. Under such situation, the hosts specified in the Group field is a destination group.</p> <p><b>Both:</b> Select <b>both</b> to prioritize the traffics passing through the specified interface, both Inbound and Outbound are considered. Under such situation, the hosts specified in the Group field can be a source or destination group.</p>
<b>Sharing Method</b>	1. A Must filled	Specify the preferred sharing method for how to apply the QoS rule on the

## 4G PoE IIoT Gateway

	setting. 2. <b>Group Control</b> is selected by default.	selected group. It can be <b>Individual Control</b> or <b>Group Control</b> .  <b>Individual Control:</b> If <b>Individual Control</b> is selected, each host in the group will have his own QoS service resource as specified in the rule. <b>Group Control:</b> If <b>Group Control</b> is selected, all the group hosts share the same QoS service resource.
<b>Time Schedule</b>	1. A Must filled setting. 2. <b>(0) Always</b> is selected by default.	Apply <b>Time Schedule</b> to this rule; otherwise leave it as (0) <b>Always</b> . (refer to <b>Object Definition &gt; Scheduling &gt; Configuration</b> settings)
<b>Rule Enable</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this QoS rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.

## Chapter 3 Object Definition

### 3.1 Scheduling

Scheduling provides ability of adding/deleting time schedule rules, which can be applied to other functionality.

#### 3.1.1 Scheduling Configuration

Go to **Object Definition > Scheduling > Configuration** tab.

Time Schedule List <span>Add</span> <span>Delete</span> <span>⬆</span> <span>✕</span>

### 3.2 User (not supported)

Not supported feature for the purchased product, leave it as blank.

# 4G PoE IIoT Gateway

## 3.3 Grouping

The Grouping function allows user to make group for some services.

### 3.3.1 Host Grouping

Go to **Object Definition > Grouping > Host Grouping** tab.

The Host Grouping function allows user to make host group for some services, such as QoS, Firewall, and Communication Bus. The supported service types could be different for the purchased product.

<div>Host Group List</div> <div>AddDelete</div>						
ID	Group Name	Group Type	Member List	Bound Services	Enable	Actions

When **Add** button is applied, **Host Group Configuration** screen will appear.

Host Group Configuration	
Item	Setting
▶ Group Name	<input type="text"/>
▶ Group Type	<div>IP Address-based</div>
▶ Member to Join	<div><input type="text"/>Join</div>
▶ Member List	
▶ Bound Services	<div><input type="checkbox"/> Firewall<input type="checkbox"/> QoS</div>
▶ Group	<div><input type="checkbox"/> Enable</div>

Host Group Configuration		
Item	Value setting	Description
Group Name	1. String format can be any text 2. A Must filled setting	Enter a group name for the rule. It is a name that is easy for you to understand.
Group Type	1. <b>IP Address-based</b> is selected by default. 2. A Must filled setting	Select the group type for the host group. It can be <b>IP Address-based</b> , <b>MAC Address-based</b> , or <b>Host Name-based</b> . When <b>IP Address-based</b> is selected, only IP address can be added in <b>Member to Join</b> . When <b>MAC Address-based</b> is selected, only MAC address can be added in <b>Member to Join</b> .

## 4G PoE IIoT Gateway

		<p>When <b>Host Name-based</b> is selected, only host name can be added in <b>Member to Join</b>.</p> <p>Note: The available Group Type can be different for the purchased model.</p>
<b>Member to Join</b>	N/A	<p>Add the members to the group in this field.</p> <p>You can enter the member information as specified in the Member Type above, and press the <b>Join</b> button to add.</p> <p>Only one member can be add at a time, so you have to add the members to the group one by one.</p>
<b>Member List</b>	NA	This field will indicate the hosts (members) contained in the group.
<b>Bound Services</b>	The boxes are unchecked by default	<p>Binding the services that the host group can be applied. If you enable the <b>Firewall</b>, the produced group can be used in firewall service. Same as by enable <b>QoS</b>, or other available service types.</p> <p><b>Note:</b> The supported service type can be different for the purchased product.</p>
<b>Group</b>	The box is unchecked by default	Check the <b>Enable</b> checkbox to activate the host group rule. So that the group can be bound to selected service(s) for further configuration.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## 3.4 External Server

Go to **Object Definition > External Server > External Server** tab.

The External Server setting allows user to add external server.

### Create External Server

External Server List <span>Add</span> <span>Delete</span> <span></span>

<b>Server</b>	The box is checked by default	Click <b>Enable</b> to activate this External Server.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the external server list.

3.5 Certificate

In cryptography, a public key certificate (also known as a digital certificate or identity certificate) is an electronic document used to prove ownership of a public key. The certificate includes information about the key, information about its owner's identity, and the digital signature of an entity that has verified the certificate's contents are genuine. If the signature is valid, and the person examining the certificate trusts the signer, then they know they can use that key to communicate with its owner<sup>7</sup>.

In a typical public-key infrastructure (PKI) scheme, the signer is a certificate authority (CA), usually a company such as VeriSign which charges customers to issue certificates for them. In a web of trust scheme, the signer is either the key's owner (a self-signed certificate) or other users ("endorsements") whom the person examining the certificate might know and trust. The device also plays as a CA role.

Certificates are an important component of Transport Layer Security (TLS, sometimes called by its older name SSL), where they prevent an attacker from impersonating a secure website or other server. They are also used in other important applications, such as email encryption and code signing. Here, it can be used in IPSec tunneling for user authentication.

3.5.1 Configuration

The configuration setting allows user to create Root Certificate Authority (CA) certificate and configure to set enable of SCEP. Root CA is the top-most certificate of the tree, the private key of which is used to "sign" other certificates.

Go to **Object Definition > Certificate > Configuration** tab.

Create Root CA

Root CA <span>Generate</span>					 
ID	Name	Subject	Issuer	Vaild To	Action

When **Generate** button is applied, **Root CA Certificate Configuration** screen will appear. The required information to be filled for the root CA includes the name, key, subject name and validity.

<sup>7</sup> [http://en.wikipedia.org/wiki/Public\\_key\\_certificate](http://en.wikipedia.org/wiki/Public_key_certificate).

# 4G PoE IIoT Gateway

## 3.5.2 My Certificate

My Certificate includes a Local Certificate List. Local Certificate List shows all generated certificates by the root CA for the gateway. And it also stores the generated Certificate Signing Requests (CSR) which will be signed by other external CAs. The signed certificates can be imported as the local ones of the gateway.

### Self-signed Certificate Usage Scenario

#### Scenario Application Timing

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself or import any local certificates that are signed by other external CAs. Also import the trusted certificates for other CAs and Clients. In addition, since it has the root CA, it also can sign Certificate Signing Requests (CSR) to form corresponding certificates for others. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

#### Scenario Description

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also import the certificates of the root CA of the Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to following two sub-sections)

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all

# 4G PoE IIoT Gateway

client hosts in these both subnets can communicate with each other.

## Parameter Setup Example

For Network-A at HQ

Following tables list the parameter configuration as an example for the "My Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in following two sections to complete the whole user scenario.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[My Certificate]-[Root CA Certificate Configuration]
Name	<b>HQRootCA</b>
Key	Key Type: <b>RSA</b> Key Length: <b>1024-bits</b>
Subject Name	Country(C): <b>TW</b> State(ST): <b>Taiwan</b> Location(L): <b>Tainan</b> Organization(O): <b>AMITHQ</b> Organization Unit(OU): <b>HQRD</b> Common Name(CN): <b>HQRootCA</b> E-mail: <b>hqrootca@amit.com.tw</b>

## 4G PoE IIoT Gateway

Remote Netmask	255.255.255.0
Remote Gateway	203.95.80.22

Configuration Path	[IPSec]-[Authentication]
Key Management	IKE+X.509 Local Certificate: <b>BranchCRT</b> Remote Certificate: <b>HQCRT</b>
Local ID	User Name Network-B
Remote ID	User Name Network-A

Configuration Path	[IPSec]-[IKE Phase]
Negotiation Mode	Main Mode
X-Auth	None

### Scenario Operation Procedure

In above diagram, "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

Gateway 1 generates the root CA and a local certificate (HQCRT) that is signed by itself. Import the certificates of the root CA and HQCRT into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

Gateway 2 generates a Certificate Signing Request (BranchCSR) for its own certificate (BranchCRT) (Please generate one not self-signed certificate in the Gateway 2, and click on the "View" button for that CSR. Just downloads it). Take the CSR to be signed by the root CA of Gateway 1 and obtain the BranchCRT certificate (you need rename it). Import the certificate into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of Gateway 2.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# 4G PoE IIoT Gateway

## My Certificate Setting

Go to **Object Definition > Certificate > My Certificate** tab.

The My Certificate setting allows user to create local certificates. In "My Certificate" page, there are two configuration windows for the "My Certificate" function. The "Local Certificate List" window shows the stored certificates or CSRs for representing the gateway. The "Local Certificate Configuration" window can let you fill required information necessary for corresponding certificate to be generated by itself, or corresponding CSR to be signed by other CAs.

### Create Local Certificate

Local Certificate List					
<div>AddImportDelete</div>					
ID	Name	Subject	Issuer	Valid To	Actions

When **Add** button is applied, **Local Certificate Configuration** screen will appear. The required information to be filled for the certificate or CSR includes the name, key and subject name. It is a certificate if the "Self-signed" box is checked; otherwise, it is a CSR.

Local Certificate Configuration	
Item	Setting
Name	<input type="text"/> Self-signed : <input type="checkbox"/>
Key	Key Type : <span>RSA</span> Key Length : <span>1024-bits</span> Digest Algorithm : <span>SHA-1</span>
Subject Name	Country(C) : <input type="text"/> State(ST) : <input type="text"/> Location(L) : <input type="text"/> Organization(O) : <input type="text"/> Organization Unit(OU) : <input type="text"/> Common Name(CN) : <input type="text"/> E-mail : <input type="text"/>
Extra Attributes	Challenge Password: <input type="text"/> Unstructured Name: <input type="text"/>
SCEP Enrollment	Enable: <input type="checkbox"/> SCEP Server: <span>--- Option ---</span> <span>Add Object</span> CA Certificate: <span>amit-IDG761AM-JH.crt</span> CA Encryption Certificate: <span>--- Option ---</span> (Optional) CA Identifier: <input type="text"/> (Optional)

## 4G PoE IIoT Gateway

Local Certificate Configuration		
Item	Value setting	Description
<b>Name</b>	1. String format can be any text 2. A Must filled setting	Enter a certificate name. It will be a certificate file name If <b>Self-signed</b> is checked, it will be signed by root CA. If <b>Self-signed</b> is not checked, it will generate a certificate signing request (CSR).
<b>Key</b>	A Must filled setting	This field is to specify the key attributes of certificate. <b>Key Type</b> to set public-key cryptosystems. Currently, only RSA is supported. <b>Key Length</b> to set the length in bits of the key used in a cryptographic algorithm. It can be 512/768/1024/1536/2048. <b>Digest Algorithm</b> to set identifier in the signature algorithm identifier of certificates. It can be MD5/SHA-1.
<b>Subject Name</b>	A Must filled setting	This field is to specify the information of certificate. <b>Country(C)</b> is the two-letter ISO code for the country where your organization is located. <b>State(ST)</b> is the state where your organization is located. <b>Location(L)</b> is the location where your organization is located. <b>Organization(O)</b> is the name of your organization. <b>Organization Unit(OU)</b> is the name of your organization unit. <b>Common Name(CN)</b> is the name of your organization. <b>Email</b> is the email of your organization. It has to be email address setting only.
<b>Extra Attributes</b>	A Must filled setting	This field is to specify the extra information for generating a certificate. <b>Challenge Password</b> for the password you can use to request certificate revocation in the future. <b>Unstructured Name</b> for additional information.
<b>SCEP Enrollment</b>	A Must filled setting	This field is to specify the information of SCEP. If user wants to generate a certificate signing request (CSR) and then signed by SCEP server online, user can check the <b>Enable</b> box.  Select a <b>SCEP Server</b> to identify the SCEP server for use. The server detailed information could be specified in External Servers. Refer to <b>Object Definition &gt; External Server &gt; External Server</b> . You may click <b>Add Object</b> button to generate, and the settings are the same as those defined in <b>Section 3.4 External Server</b> .  Select a <b>CA Certificate</b> to identify which certificate could be accepted by SCEP server for authentication. It could be generated in Trusted Certificates.  Select an optional <b>CA Encryption Certificate</b> , if it is required, to identify which certificate could be accepted by SCEP server for encryption data information. It could be generated in Trusted Certificates.  Fill in optional <b>CA Identifier</b> to identify which CA could be used for signing certificates.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Back</b>	N/A	When the <b>Back</b> button is clicked, the screen will return to previous page.

# 4G PoE IIoT Gateway

When **Import** button is applied, an Import screen will appear. You can import a certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

PEM Encoded	1. String format can be any text 2. A Must filled setting	This is an alternative approach to import a certificate. You can directly fill in (Copy and Paste) the PEM encoded certificate string, and click the <b>Apply</b> button to import the specified certificate to the gateway.
Apply	N/A	Click the <b>Apply</b> button to import the certificate.
Cancel	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the My Certificates page.

## 3.5.3 Trusted Certificate

Trusted Certificate includes Trusted CA Certificate List, Trusted Client Certificate List, and Trusted Client Key List. The Trusted CA Certificate List places the certificates of external trusted CAs. The Trusted Client Certificate List places the others' certificates what you trust. And the Trusted Client Key List places the others' keys what you trusted.

### Self-signed Certificate Usage Scenario

Scenario Application Timing (same as the one described in "My Certificate" section)

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself. Also imports the trusted certificates for other CAs and Clients. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

Scenario Description (same as the one described in "My Certificate" section)

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also imports the certificates of the root CA of Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to "My Certificate" and "Issue Certificate" sections).

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all client hosts in these both subnets can communicate with each other.

Parameter Setup Example (same as the one described in "My Certificate" section)

## 4G PoE IIoT Gateway

For Network-A at HQ

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issue Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>BranchCRT.crt</i>

For Network-B at Branch Office

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issued Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate Import from a File]
<b>File</b>	<i>HQRootCA.crt</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>HQCRT.crt</i>

Scenario Operation Procedure (same as the one described in "My Certificate" section)

In above diagram, the "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. The "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

In Gateway 2 import the certificates of the root CA and HQCRT that were generated and signed by Gateway 1 into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

## 4G PoE IIoT Gateway

---

Import the obtained BranchCRT certificate (the derived BranchCSR certificate after Gateway 1's root CA signature) into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of the Gateway 2. For more details, refer to the Network-B operation procedure in "My Certificate" section of this manual.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# 4G PoE IIoT Gateway

## Trusted Certificate Setting

Go to **Object Definition > Certificate > Trusted Certificate** tab.

The Trusted Certificate setting allows user to import trusted certificates and keys.

### Import Trusted CA Certificate

Trusted CA Certificate List						Import	Delete	Get CA		
ID	Name	Subject		Issuer		Vaild To		Actions		

When **Import** button is applied, a **Trusted CA import** screen will appear. You can import a Trusted CA certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

You can directly fill in (Copy and Paste) the PEM encoded certificate key string, and click the <b>Apply</b> button to import the specified certificate key to the gateway.
Apply	N/A	Click the <b>Apply</b> button to import the certificate key.
Cancel	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the Trusted Certificates page.

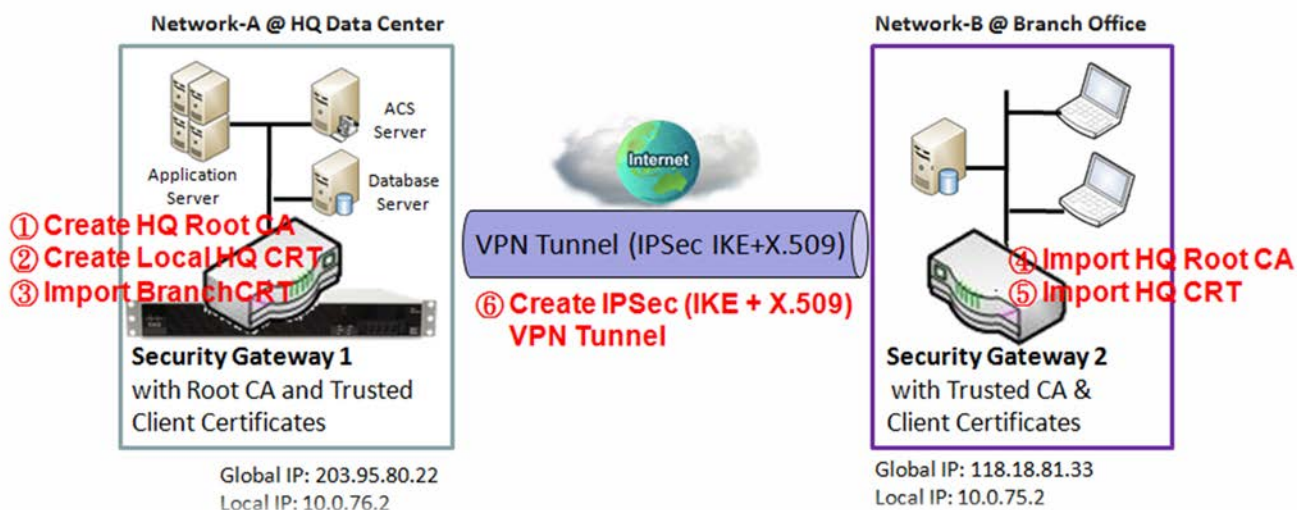

# 4G PoE IIoT Gateway

## 3.5.4 Issue Certificate

When you have a Certificate Signing Request (CSR) that needs to be certificated by the root CA of the device, you can issue the request here and let Root CA sign it. There are two approaches to issue a certificate. One is from a CSR file importing from the managing PC and another is copy-paste the CSR codes in gateway's web-based utility, and then click on the "Sign" button.

If the gateway signs a CSR successfully, the "Signed Certificate View" window will show the resulted certificate contents. In addition, a "Download" button is available for you to download the certificate to a file in the managing PC.

### Self-signed Certificate Usage Scenario

Scenario Application Timing (same as the one described in "My Certificate" section)

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself. Also imports the trusted certificates for other CAs and Clients. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

Scenario Description (same as the one described in "My Certificate" section)

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Also imports a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also imports the certificates of the root CA of the Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer

## 4G PoE IIoT Gateway

to "My Certificate" and "Trusted Certificate" sections).

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all client hosts in these both subnets can communicate with each other.

Parameter Setup Example (same as the one described in "My Certificate" section)

For Network-A at HQ

Following tables list the parameter configuration as an example for the "Issue Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Trusted Certificate" sections to complete the setup for whole user scenario.

<b>Configuration Path</b>	[Issue Certificate]-[Certificate Signing Request Import from a File]
<b>Browse</b>	<i>C:/BranchCSR</i>
<b>Command Button</b>	<i>Sign</i>

<b>Configuration Path</b>	[Issue Certificate]-[Signed Certificate View]
<b>Command Button</b>	<i>Download</i> (default name is "issued.crt")

Scenario Operation Procedure (same as the one described in "My Certificate" section)

In above diagram, the "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. The "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

Gateway 1 generates the root CA and a local certificate (HQCRT) that is signed by itself. Import the certificates of the root CA and HQCRT into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

Gateway 2 generates a Certificate Signing Request (BranchCSR) for its own certificate BranchCRT to be signed by root CA (Please generate one not self-signed certificate in the Gateway 2, and click on the "View" button for that CSR. Just downloads it). Take the CSR to be signed by the root CA of the Gateway 1 and obtain the BranchCRT certificate (you need rename it). Import the certificate into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of the Gateway 2.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# 4G PoE IIoT Gateway

## Issue Certificate Setting

Go to **Object Definition > Certificate > Issue Certificate** tab.

The Issue Certificate setting allows user to import Certificate Signing Request (CSR) to be signed by root CA.

### Import and Issue Certificate

Certificate Signing Request (CSR) Import from a FileSign

Choose FileNo file chosen

Certificate Signing Request (CSR) Import from a PEMSign

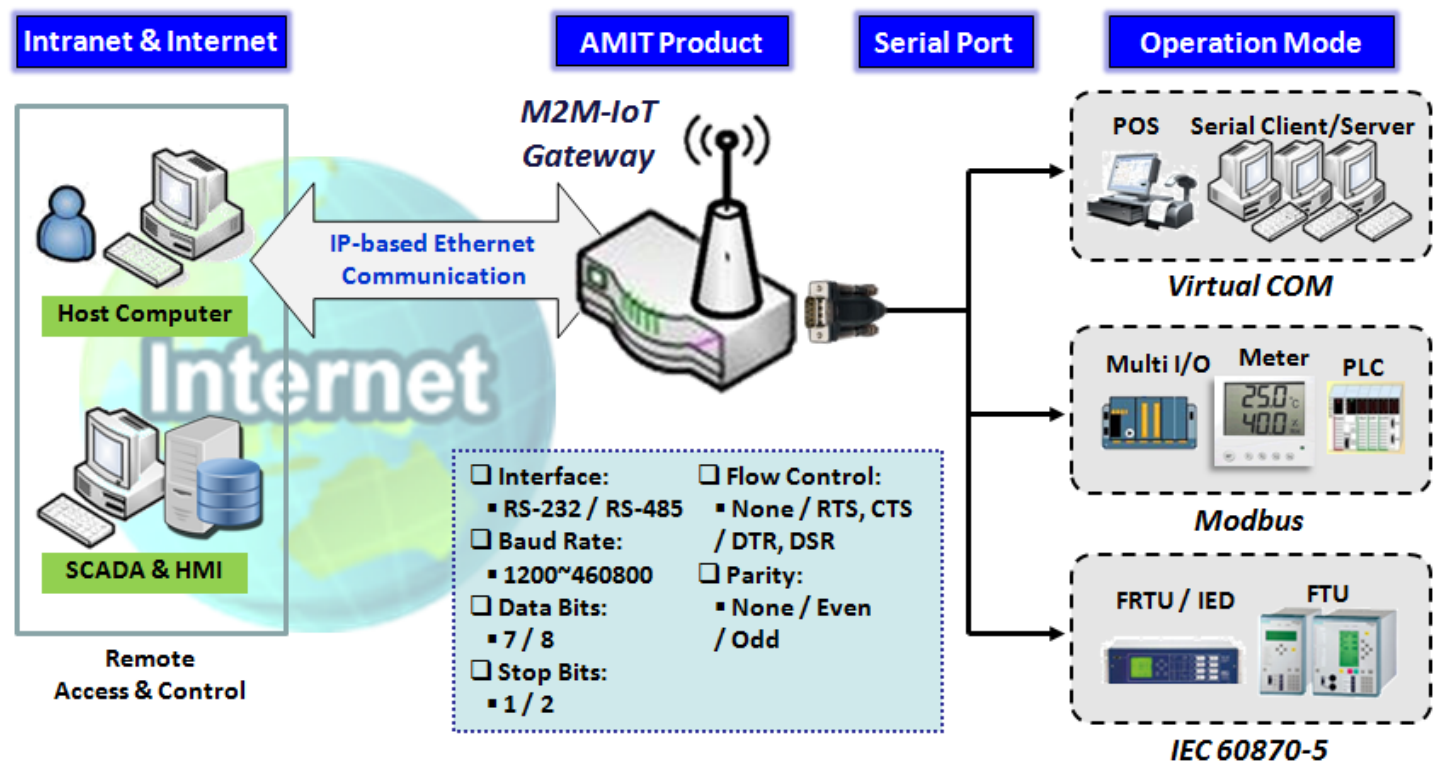

Certificate Signing Request (CSR) Import from a File		
Item	Value setting	Description
Certificate Signing Request (CSR) Import from a File	A Must filled setting	Select a certificate signing request file you're your computer for importing to the gateway.
Certificate Signing Request (CSR) Import from a PEM	1. String format can be any text 2. A Must filled setting	Enter (copy-paste) the certificate signing request PEM encoded certificate to the gateway.
Sign	N/A	When root CA is exist, click the <b>Sign</b> button sign and issue the imported certificate by root CA.

Chapter 4 Field Communication

4.1 Bus & Protocol

The gateway may equip one or more serial port(s) for various serial communication use through connecting the RS-232 or RS-485 serial devices to an IP-based Ethernet LAN. These communication protocols make user access serial devices anywhere over a local LAN or the Internet easily. They can be "Virtual COM" and "Modbus".

4.1.1 Port Configuration

Before using the supported field communication function, like Virtual COM or Modbus, you need to configure the physical communication port first.

The port configuration screen allows user to configure the operation mode and physical layer settings for each serial interface, and also can quick switch from one communication protocol to another for the serial port. The number of ports and type of the supported protocols could be different for the purchased gateway model.

# 4G PoE IIoT Gateway

## Port Configuration Setting

Go to **Field Communication > Bus & Protocol > Port Configuration** tab.

In "Port Configuration" page, there is only one configuration window for the serial port settings. The "Configuration" window can let you specify serial port parameters including the operation mode being "Virtual COM", "Modbus" or disabled, the interface, the baud rate, the data bit length, the stop bit length, the flow control being "RTS/CTS", "DTS/DSR" or "None", and the parity.

Serial Port Definition								
Serial Port	Operation Mode	Interface	Baud Rate	Data Bits	Stop Bits	Flow Control	Parity	Action
SPort-0	Disable	RS-232	9600	8	1	None	None	Edit

Port Configuration Window		
Item	Value setting	Description
<b>Serial Port</b>	N/A	It displays the serial port ID of the serial port. The number of serial ports varies from the purchased model.
<b>Operation Mode</b>	<b>Disable</b> is set by default	Select the operation mode for the serial interface. The available modes can be Disable, Virtual COM or Modbus.
<b>Interface</b>	<b>RS-232</b> is set by default	Select the physical interface type for connecting to the access device(s) with the same interface specification. Depending on the purchase model, the supported interface type could be RS-232 or RS-485.
<b>Baud Rate</b>	<b>9600</b> is set by default	Select the appropriate baud rate for serial device communication. RS-232: 1200 / 2400 / 4800 / 9600 / 19200 / 38400 / 57600 / 115200 RS-485 can use higher baud rate for 230400 and 460800. It depends on the cable length and the installed environment. The longer cable, the lower baud rate for it.
<b>Data Bits</b>	<b>8</b> is set by default	Select 8 or 7 for data bits.
<b>Stop Bits</b>	<b>1</b> is set by default	Select 1 or 2 for stop bits.
<b>Flow Control</b>	<b>None</b> is set by default	Select None / RTS, CTS / DTS, DSR for Flow Control in RS-232 mode. The supporting of Flow Control depends on the purchased model.
<b>Parity</b>	<b>None</b> is set by default	Select None / Even / Odd for Parity bit.
<b>Action</b>	N/A	Click <b>Edit</b> button to change the operation mode, or modify the parameters mentioned above for the serial interface communication.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings.

# 4G PoE IIoT Gateway

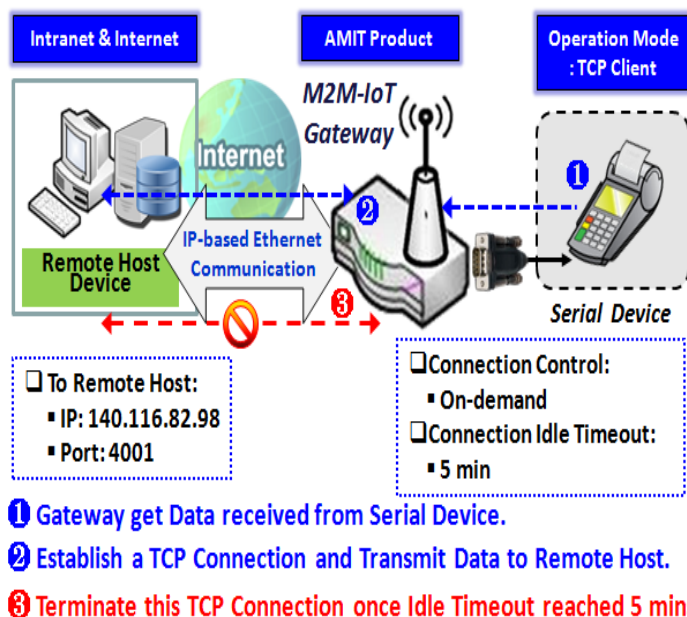

## 4.1.2 Virtual COM

Create a virtual COM port on user's PC/Host to provide access to serial device connected to the serial port on gateway. Therefore, users can access, control, and manage the connected serial device through Internet (fixed line, or cellular network) anywhere. This application is also known as Ethernet pass-through communication.

Operation Mode Definition for each Serial Port									
Serial Port	Operation Mode	Listen Port	Trust Type	Max Connection	Connection Control	Connection Idle Timeout	Alive Check Timeout	Enable	Action
SPort-0	Disable	N/A	N/A	N/A	N/A	N/A	N/A	<input type="checkbox"/>	Edit

Virtual COM setting screen enables user to connect a Virtual COM port based device to the Internet. It allows user to access serial data remotely. There are Disable, TCP Client, TCP Server, UDP, and RFC2217 modes for remote accessing the connected serial device. These operation modes are illustrated as below.

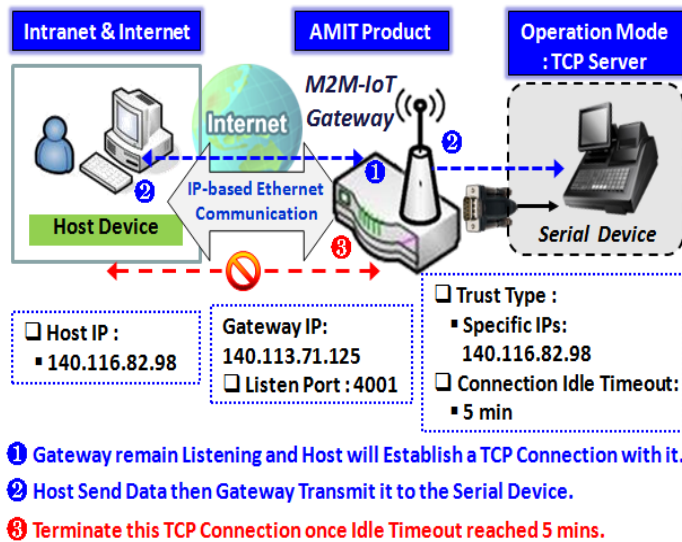

### TCP Client Mode

When the administrator expects the gateway to actively establish a TCP connection to a pre-defined host computer when serial data arrives, the operation mode for the "Virtual COM" function is required to be "TCP Client" and when the connection control of virtual COM is "On-demand", once the gateway receives data from the connected serial device, it will establish a TCP connection to transfer the received serial data to the remote host. Besides, after the data has been transferred, the gateway automatically disconnects the established TCP session from the host computer by using the TCP alive check timeout or idle timeout settings.

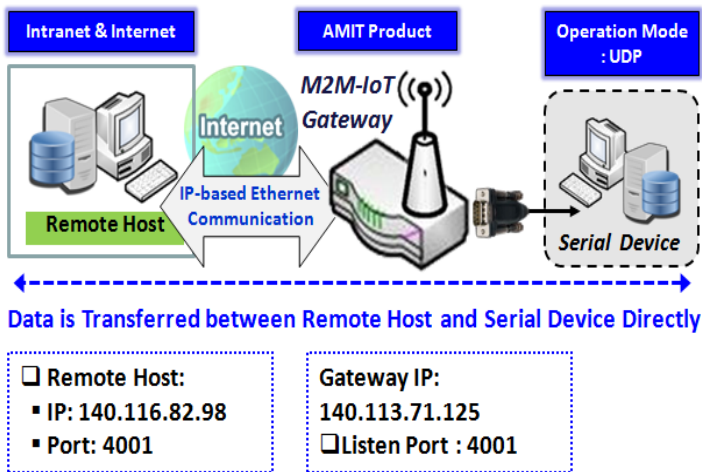

# 4G PoE IIoT Gateway

## TCP Server Mode

When the administrator expects the gateway to wait passively for the serial data requests from the Host Device (usually we use a computer to play as a Host), and the Host will establish a TCP connection to get data from the serial device, the operation mode for the "Virtual COM" function is required to be "TCP Server". In this mode, the gateway provides a unique "IP: Port" address on a TCP/IP network. It supports up to 4 simultaneous connections, so that multiple hosts can collect data from the same serial device at the same time. After the data has been transferred, the TCP connection will be automatically disconnected from the host computer by using the TCP alive check timeout or idle timeout settings.

## UDP Mode

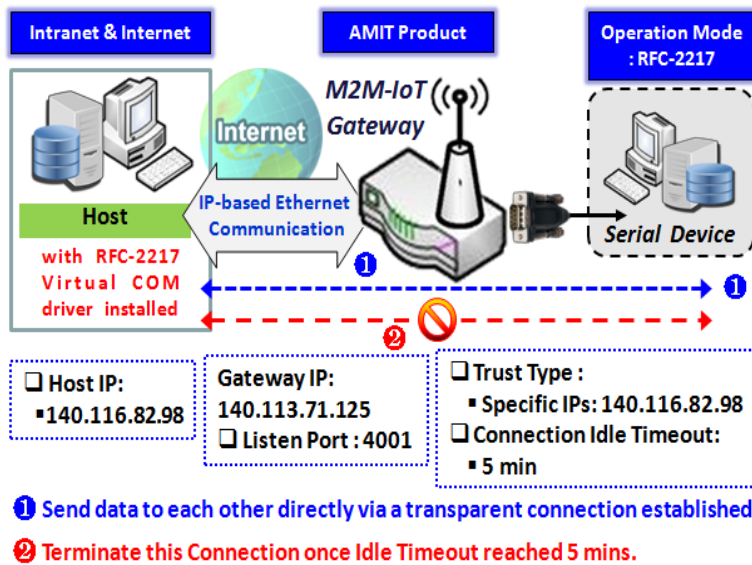

If both the Remote Host Computer and the serial device are expected to initiate a data transfer when it requires doing that, the operation mode for the "Virtual COM" function in the gateway is required to be "UDP". In this mode, the UDP data can be transferred between the gateway and multiple host computers from either peer, making this mode ideal for message display applications.

The remote host computer can directly send UDP data to the serial device via the gateway, and also receive UDP data from the serial device via the gateway at the same time. The gateway supports up to 4 legal hosts to connect simultaneously to the serial device via the gateway.

# 4G PoE IIoT Gateway

## RFC-2217 Mode

RFC-2217 defines general COM port control options based on telnet protocol. A host computer with RFC-2217 driver installed can monitor and manage the remote serial device attached to the gateway's serial port, as though they were connected to the local serial port. When a virtual serial port on the local serial device is being created, it is required to specify the IP-address of the host computers to establish connection with.

Any 3rd party driver supporting RFC2217 can be used to install in the host computer, the driver establishes a transparent connection between host and serial device by mapping the IP:Port of the gateway's serial port to a virtual local COM

port on the host computer.

The host computer can directly send data to the serial device via the gateway, and also receive data from the serial device via the gateway at the same time. The gateway supports up to 4 Internet host computers.

# 4G PoE IIoT Gateway

## Virtual COM Setting

Virtual COM setting screen enables user to connect a Virtual COM port based device to the Internet. It allows user to access serial data remotely. There are Disable, TCP Client, TCP Server, UDP, and RFC2217 modes for remote accessing the connected serial device. By default, it is configured in Disable mode.

To use the Virtual COM function, you have to specify the operation mode for the multi-function serial port first. Go to **Field Communication > Bus & Protocol > Port Configuration** tab, select the Virtual COM as expected operation mode, and finish the related port configuration as well.

After that, go to **Field Communication > Bus & Protocol > Virtual COM** tab for detailed configuration of Virtual COM setting.

### Enable TCP Client Mode

Configure the gateway as the TCP (Transmission Control Protocol) Client. In TCP Client mode, device initiates a TCP connection with a TCP server when there is data to transmit. Device disconnects from the server when the connection is Idle for a specified period. You may also enable full time connection with the TCP server.

Operation Mode Definition for each Serial Port									
Serial Port	Operation Mode	Listen Port	Trust Type	Max Connection	Connection Control	Connection Idle Timeout	Alive Check Timeout	Enable	Action
SPort-0	TCP Client ▾	4001 (1~65535)	Allow All ▾	1	Always on ▾	0 (0-3600secs)	0 (0-3600secs)	<input type="checkbox"/>	Edit

Enable TCP Client Mode Window		
Item	Value setting	Description
Operation Mode	A Must filled setting	Select <b>TCP Client</b> .
Connection Control	<b>Always on</b> is set by default	Choose <b>Always on</b> for a TCP full time connection. Otherwise, choose <b>On-Demand</b> to initiate TCP connection only when required to transmit and disconnect at idle timeout.
Connection Idle Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the idle timeout in minutes. The idle timeout is used to disconnect the TCP connection when idle time elapsed . Idle timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Alive Check Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the time period of alive check timeout. The TCP connection will be terminated if it doesn't receive response of alive-check longer than this timeout setting Alive check timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Enable	The box is unchecked by default.	Check the <b>Enable</b> box to activate the corresponding serial port in specified operation mode.
Save	N/A	Click the <b>Save</b> button to save the configuration

# 4G PoE IIoT Gateway

## Specify Data Packing Parameters

 Data Packing (for TCP Client, TCP Server and UDP operation mode)  

Serial Port	Data Buffer Length	Delimiter Character 1	Delimiter Character 2	Data Timeout Transmit
SPort-0	<input type="text" value="0"/> (0~1024)	<input type="text" value="0"/> (Hex) <input type="checkbox"/> Enable	<input type="text" value="0"/> (Hex) <input type="checkbox"/> Enable	<input type="text" value="0"/> (0~1000ms)

Data Packing Configuration		
Item	Value setting	Description
Data Buffer Length	1.An optional filled setting 2.Default value is 0	Enter the data buffer length for the serial port. <b>Value Range:</b> 0 ~ 1024.
Delimiter Character 1	1.An optional filled setting 2.Default value is 0	Check the <b>Enable</b> box to activate the Delimiter character 1, and enter the Hex code for it. <b>Value Range:</b> 0x00 ~ 0xFF.
Delimiter Character 2	1.An optional filled setting 2.Default value is 0	Check the <b>Enable</b> box to activate the Delimiter character 2, and enter the Hex code for it. <b>Value Range:</b> 0x00 ~ 0xFF.
Data Timeout Transmit	1.An optional filled setting 2.Default value is 0	Enter the data timeout interval for transmitting serial data through the port. By default, it is set to 0 and the timeout function is disabled. <b>Value Range:</b> 0 ~ 1000ms.
Save	N/A	Click the <b>Save</b> button to save the configuration

## Specify Remote TCP Server

 Legal Host IP/ FQDN Definition (for TCP Client operation mode) 

ID	To Remote Host	Remote Port	Serial Port	Definition Enable	Action
1		4001	SPort-0	<input type="checkbox"/>	<input type="button" value="Edit"/>
2		4001	SPort-0	<input type="checkbox"/>	<input type="button" value="Edit"/>
3		4001	SPort-0	<input type="checkbox"/>	<input type="button" value="Edit"/>
4		4001	SPort-0	<input type="checkbox"/>	<input type="button" value="Edit"/>

Specify TCP Server Window		
Item	Value setting	Description
To Remote Host	A Must filled setting	Press <b>Edit</b> button to enter IP address or FQDN of the remote TCP server to transmit serial data.
Remote Port	1.A Must filled setting 2.Default value is 4001	Enter the TCP port number. This is the listen port of the remote TCP server. <b>Value Range:</b> 1 ~ 65535.
Serial Port	SPort-0 is set by default	Apply the TCP server connection for a selected serial port. Up to 4 TCP servers can be configured at the same time for each serial port.
Definition Enable	The box is unchecked by default	Check the <b>Enable</b> box to enable the TCP server configuration.
Save	N/A	Click the <b>Save</b> button to save the configuration

# 4G PoE IIoT Gateway

## Enable TCP Server Mode

Configure the gateway as the TCP (Transmission Control Protocol) Server. The TCP Server waits for connections to be initiated by a remote TCP client device to receive serial data. The setting allows user to specify specific TCP clients or allow any to send serial data for serial data transmission bandwidth control and access control. The TCP Server supports up to 128 simultaneous connections to receive serial data from multiple TCP clients.

Operation Mode Definition for each Serial Port									
Serial Port	Operation Mode	Listen Port	Trust Type	Max Connection	Connection Control	Connection Idle Timeout	Alive Check Timeout	Enable	Action
SPort-0	TCP Server ▼	4001 (1~65535)	Allow All ▼	1	Always on ▼	0 (0-3600secs)	0 (0-3600secs)	<input type="checkbox"/>	Edit

Enable TCP Server Mode Window		
Item	Value setting	Description
Operation Mode	A Must filled setting	Select <b>TCP Server</b> mode.
Listen Port	4001 is set by default	Indicate the listening port of TCP connection. <b>Value Range:</b> 1 ~ 65535.
Trust Type	Allow All is set by default	Choose <b>Allow All</b> to allow any TCP clients to connect. Otherwise choose <b>Specific IP</b> to limit certain TCP clients.
Max Connection	1. Max. 128 connections 2. 1 is set by default	Set the maximum number of concurrent TCP connections. Up to 128 simultaneous TCP connections can be established. <b>Value Range:</b> 1 ~ 128.
Connection Idle Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the idle timeout in minutes. The idle timeout is used to disconnect the TCP connection when idle time elapsed . Idle timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Alive Check Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the time period of alive check timeout. The TCP connection will be terminated if it doesn't receive response of alive-check longer than this timeout setting Alive check timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Enable	The box is unchecked by default.	Check the <b>Enable</b> box to activate the corresponding serial port in specified operation mode.
Save	N/A	Click <b>Save</b> button to save the settings.

# 4G PoE IIoT Gateway

## Specify TCP Clients for TCP Server Access

If you selected **Specific IPs** as the trust Type, the Trusted IP Definition window appears. The settings are valid for both TCP Server and RFC-2217 modes.

Trusted IP Definition (for TCP Server & RFC-2217 operation mode)				
ID	Host	Serial Port	Definition Enable	Action
1			<input type="checkbox"/>	Edit
2			<input type="checkbox"/>	Edit
3			<input type="checkbox"/>	Edit
4			<input type="checkbox"/>	Edit
5			<input type="checkbox"/>	Edit
6			<input type="checkbox"/>	Edit
7			<input type="checkbox"/>	Edit
8			<input type="checkbox"/>	Edit

Specify TCP Clients Window		
Item	Value setting	Description
Host	A Must filled setting	Enter the IP address range of allowed TCP clients.
Serial Port	The box is unchecked by default	Check the box to specify the rule for selected Serial Port.
Definition Enable	The box is unchecked by default	Check the <b>Enable</b> box to enable the rule.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Enable UDP Mode

UDP (User Datagram Protocol) enables applications using UDP socket programs to communicate with the serial ports on the serial server. The UDP mode provides connectionless communications, which enable you to multicast data from the serial device to multiple host computers, and vice versa, making this mode ideal for message display applications.

Serial Port	Operation Mode	Listen Port	Trust Type	Max Connection	Connection Control	Connection Idle Timeout	Alive Check Timeout	Enable	Action
SPort-0	UDP ▼	4001 (1~65535)	Allow All ▼	1	Always on ▼	0 (0-3600secs)	0 (0-3600secs)	<input type="checkbox"/>	Edit

Enable UDP Mode Window		
Item	Value setting	Description
Operation Mode	A Must filled setting	Select <b>UDP</b> mode.
Listen Port	4001 is set by default	Indicate the listening port of UDP connection. <b>Value Range:</b> 1 ~ 65535
Enable	The box is unchecked by default.	Check the <b>Enable</b> box to activate the corresponding serial port in specified operation mode.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

## Specify Remote UDP

ID	Remote Host	Remote Port	Serial Port	Definition Enable	Action
1		4001	SPort-0	<input type="checkbox"/>	Edit
2		4001	SPort-0	<input type="checkbox"/>	Edit
3		4001	SPort-0	<input type="checkbox"/>	Edit
4		4001	SPort-0	<input type="checkbox"/>	Edit

Specify Remote UDP hosts Window		
Item	Value setting	Description
Host	A Must filled setting	Press <b>Edit</b> button to enter IP address range of remote UDP hosts.
Remote Port	4001 is set by default	Indicate the UDP port of peer UDP hosts. <b>Value Range:</b> 1 ~ 65535
Serial Port	SPort-0 is set by default	Apply the UDP hosts for a selected serial port. Up to 4 UDP servers can be configured at the same time for each serial port.
Definition Enable	The box is unchecked by default	Check the <b>Enable</b> box to enable the rule.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Enable RFC-2217 Mode

RFC-2217 defines general COM port control options based on telnet protocol. With the RFC-2217 mode, remote host can monitor and manage remote serially attached devices, as though they were connected to the local serial port. When a virtual serial port on the local serial device is being created, it is required to specify the IP-address of the remote hosts to establish connection with.

Operation Mode Definition for each Serial Port									
Serial Port	Operation Mode	Listen Port	Trust Type	Max Connection	Connection Control	Connection Idle Timeout	Alive Check Timeout	Enable	Action
SPort-0	RFC-2217 ▼	4001 (1~65535)	Allow All ▼	1	Always on ▼	0 (0-3600secs)	0 (0-3600secs)	<input type="checkbox"/>	Edit

Enable RFC-2217 Mode Window		
Item	Value setting	Description
Operation Mode	A Must filled setting	Select <b>RFC-2217</b> mode.
Listen Port	4001 is set by default	Indicate the listening port of RFC-2217 connection. <b>Value Range:</b> 1 ~ 65535
Trust Type	<b>Allow All</b> is set by default	Choose <b>Allow All</b> to allow any clients to connect. Otherwise choose <b>Specific IP</b> to limit certain clients.
Connection Idle Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the idle timeout in minutes. The idle timeout is used to disconnect the TCP connection when idle time elapsed . Idle timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Alive Check Timeout	1. 0 is set by default 2. Range 0 to 3600 sec.	Enter the time period of alive check timeout. The TCP connection will be terminated if it doesn't receive response of alive-check longer than this timeout setting Alive check timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 0 ~ 3600 seconds.
Enable	The box is unchecked by default.	Check the <b>Enable</b> box to activate the corresponding serial port in specified operation mode.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Specify Remote Host for Access

If you selected **Specific IPs** as the trust Type, the Trusted IP Definition window appears. The settings are valid for both TCP Server and RFC-2217 modes.

Trusted IP Definition (for TCP Server & RFC-2217 operation mode)				
ID	Host	Serial Port	Definition Enable	Action
1			<input type="checkbox"/>	Edit
2			<input type="checkbox"/>	Edit
3			<input type="checkbox"/>	Edit
4			<input type="checkbox"/>	Edit
5			<input type="checkbox"/>	Edit

7			<input type="checkbox"/>	Edit
8			<input type="checkbox"/>	Edit

Specify RFC-2217 Clients for Access Window		
Item	Value setting	Description
Host	A Must filled setting	Enter the IP address range of allowed clients.
Serial Port	The box is unchecked by default	Check the box to specify the rule for selected Serial Port.
Definition Enable	The box is unchecked by default	Check the <b>Enable</b> box to enable the rule.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Configure VirtualCOM Data Logging

If you intend to monitor the traffic of the serial port, you can configure the data logging settings and enable it to get the traffic log consequently.

COM Logging

Serial Port	Storage Device	Remote Log Server(UDP)	Upload Server	Data Format	Max Record Day	Enable
SPort-0	<div>External <input type="button" value="Download"/> <input type="checkbox"/> Enable</div>	<div>IP <input type="text"/> TX Port <input type="text"/> RX Port <input type="text"/> <input type="checkbox"/> Enable</div>	<div><div>--- Option ---</div> <input type="button" value="Add Object"/> <input type="checkbox"/> Enable</div>	HEX <input type="button" value="v"/>	<input type="text" value="3"/>	<input type="checkbox"/>

COM Logging Configuration Window		
Item	Value setting	Description
Storage Device	The box is unchecked by default.	Check the <b>Enable</b> box and use the attached available storage (USB or SD-card) device to keep the data log file under the folder “\virtual-com-log\SPort-n\Date\”. Click the <b>Download</b> button to get the log files (*.csv).
Remote Log Server (UDP)	The box is unchecked by default.	Check the <b>Enable</b> box and use remote log server to keep the recorded traffic log over the serial port. You have to further specify the IP address and port number for the log server. <b>Value Range:</b> 1 ~ 65535, and 0 for disabled by default.
Upload Server	The box is unchecked by default.	Check the <b>Enable</b> box and select a pre-defined FTP server from the drop down list. You can also click the Add Object button to create a new entry for the server information. The device will auto-upload the logged traffic with a zipped file (*.csv.gz) per hour to the designated FTP server.
Data Format	HEX is set by default	Specify the data format for the logged traffic. It can be <b>HEX</b> or <b>ASCII</b> .
Max Record Day	3 is set by default	Enter the time period of alive check timeout. The TCP connection will be terminated if it doesn't receive response of alive-check longer than this timeout setting Alive check timeout is only available when <b>On-Demand</b> is selected in the <b>Connection Control</b> field. <b>Value Range:</b> 1 ~ 30 days.
Enable	The box is unchecked by default.	Check the <b>Enable</b> box to activate the data logging function for corresponding serial port with specified configuration.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## 4.1.3 Modbus

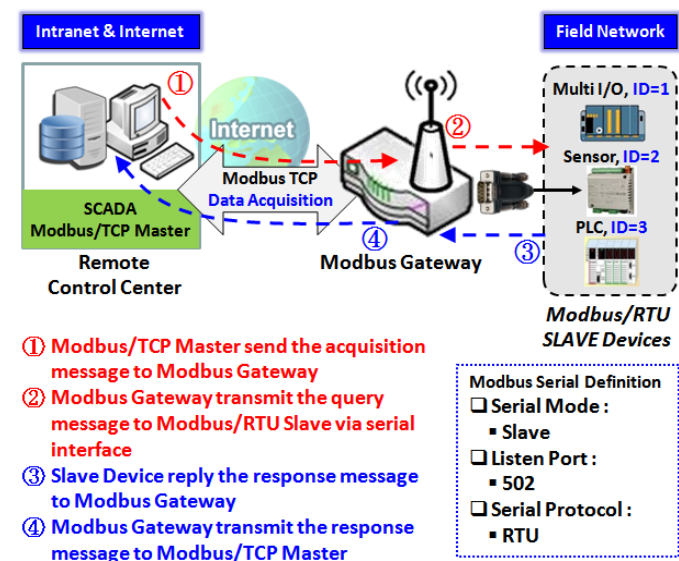

Modbus is one of the most popular automation protocols in the world, supporting traditional RS-232/422/485 devices and recently developed Ethernet devices. Many industrial devices, such as PLCs, DCSs, HMIs, instruments, and smart meters, use Modbus protocol as the communication standard. It is used to establish master-slave communication between intelligent devices.

However, the Ethernet-based Modbus protocol is so different from the original serial-based protocols. In order to integrate Modbus networks, the IoT Gateway, including one or more serial ports that support RS-232 and RS-485 communication interface, can automatically and intelligently translate between Modbus TCP (Ethernet) and Modbus RTU/ASCII (serial) protocols, allowing Ethernet-based PLCs to control instruments over RS-485 without additional programming or effort.

Serial Port Definition								
Serial Port	Operation Mode	Interface	Baud Rate	Data Bits	Stop Bits	Flow Control	Parity	Action
SPort-0	Modbus	RS-485	9600	8	1	None	None	Edit

NOTE: When Modbus devices are connected to/under the same serial port of IoT Modbus Gateway, those Modbus devices must use the same protocol with the same configuration (i.e., either Modbus RTU or Modbus ASCII with same Baud Rate setting).

## Modbus Gateway Scenario

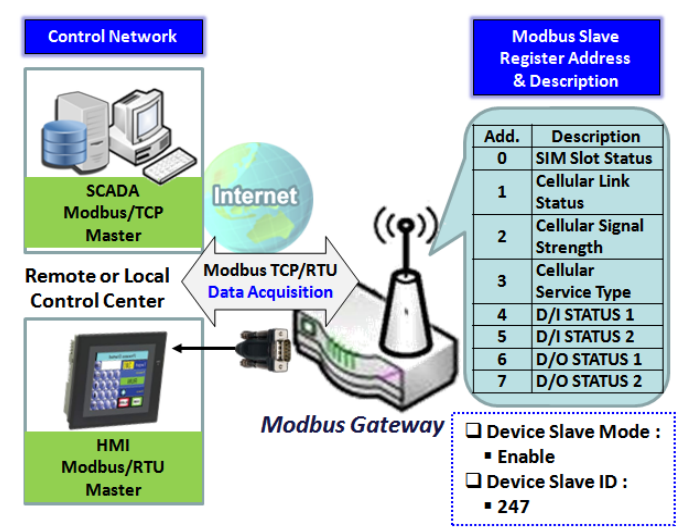

The IoT Gateway serves as a Modbus gateway to communicate with the Modbus TCP Master, the SCADA Server, located at remote control center for Modbus device accessing.

The Modbus TCP Master requests the IoT Gateway for Modbus devices' information, e.g., Data Acquisition or Register/Value Modification, via general Internet accessing, and the IoT Gateway serves as the gateway for data forwarding.

Under such configuration, the Modbus TCP Master requests the information from or sending control commands to various Modbus/RTU Slave devices that attached to the Modbus Gateway. And the Modbus gateway executes corresponding processes and replies the Modbus/TCP Master with the results.

# 4G PoE IIoT Gateway

## Modbus Slave Scenario

In addition to behave as a Modbus Gateway, there is an integrated Modbus Slave option for providing some device status, like Cellular Network Status, device DI/DO status, to remote Modbus Master via Modbus communication.

With the Slave option enabled, the Modbus Master device can request the information or sending control commands to the IIoT Gateway, the Modbus TCP/RTU Slave device. And IIoT Gateway executes corresponding processes and replies the Modbus Master devices.

# 4G PoE IIoT Gateway

## Modbus Setting

Go to **Field Communication > Bus & Protocol > Modbus** tab.

The Modbus setting page enables user to configure the gateway to operate as a Modbus gateway, and allow access among Modbus TCP devices (which are connected to Ethernet network) and Modbus RTU/ASCII devices (which are connected to the Serial Port of the gateway). Once completed the Modbus settings in this section, ensure to select Modbus Operation Mode in Port Configuration screen to enable Modbus communication on the serial port.

### Define Modbus Gateway function for each Serial Port

Modbus Gateway Definition						
Serial Port	Gateway Mode	Device Slave Mode	Listen Port	Serial Protocol	Enable	Action
▶ SPort-0	Disable	Slave Mode: Disable	502	RTU	<input checked="" type="checkbox"/>	Edit

Modbus Gateway Definition		
Item	Value setting	Description
Serial Port	N/A	It displays the name of the serial port used. E.g. SPort-0. The number of serial ports varies from the purchased model.
Gateway Mode	Disable is set by default	Specify the Modbus gateway mode for the selected serial port. It can be <b>Disable</b> , <b>Serial as Slave</b> or <b>Serial as Master</b> . A serial port can be attached with one Modbus Master, or daisy-chained a group of Modbus Slave devices.  <b>Disable:</b> Select this to disable the respective Modbus gateway function for the selected serial port. <b>Serial as Slave:</b> Select this when the attached serial device(s) are all Modbus Slave devices. <b>Serial as Master:</b> Select this when the attached serial device is a Modbus Master device.
Device Slave Mode	Disable is set by default	Check the <b>Enable</b> box to activate the integrated Modbus Slave function, and enter the preferred ID for the integrated Modbus slave. So that, it can function as a Modbus Slave device, and can be accessed with legacy Modbus Function Code from a SCADA management system. Supported Modbus commands are listed in the following Table.  <b>Value Range:</b> 1 ~ 247.
Listen Port	1. 502 is set by default 2. Range 1 to 65535	Specify the Listen Port number if Slave device(s) is attached to the selected serial port. It is a don't care setting if a Master device is attached. <b>Value Range:</b> 1 ~ 65535.

# 4G PoE IIoT Gateway

		Note: Use different port number among the serial ports for the product with multiple serial ports.
<b>Serial Protocol</b>	RTU is set by default	Select the serial protocol that is adopted by the attached Modbus device(s). It can be <b>RTU</b> or <b>ASCII</b> .
<b>Enable</b>	N/A	It displays whether the specific Modbus serial port is enabled or disabled. To enable or disable Modbus serial port, go to <b>Field Communication &gt; Bus &amp; Protocol &gt; Port Configuration</b> tab, and set the operation mode as <b>Modbus</b> .

## Specify Gateway Configuration

Gateway Mode Configuration for SPort-0	
Item	Setting
▶ Response Timeout	1000 ms (1~65535)
▶ Timeout Retries	0 times (0~5)
▶ 0Bh Exception	<input type="checkbox"/> Enable
▶ Tx Delay	<input type="checkbox"/> Enable
▶ TCP Connection Idle Time	300 sec (1~65535)
▶ Maximum TCP Connections	1 connections (1~4)
▶ TCP Keep-alive	<input type="checkbox"/> Enable
▶ Modbus Master IP Access	Allow All ▼
▶ Message Buffering	<input type="checkbox"/> Enable

Gateway Mode Configuration for SPort-n		
Item	Value setting	Description
<b>Response Timeout</b>	1000 ms is set by default	<p>This sets the response timeout of the slave after master request sent. If the slave does not response within the specified time, data would be discarded.</p> <p>This applies to the serially attached Master sent request over to the remote Slave or requests send from the remote Master sent to the serially attached Slave.</p> <p><b>Value Range:</b> 1 ~ 65535.</p>
<b>Timeout Retries</b>	0 is set by default	<p>If the slave does not respond to the Master's request, the gateway will resend the request stored in the buffer. If Timeout retries is set to null (value zero), the gateway would not buffer Master requests. If a value other than zero is specified, the gateway would store the Master request in the buffer and retries to send the request in a number of specified times.</p> <p>Once the retries are exhausted, the gateway will send a Modbus error message to the Master. However, if the 0Bh exception box is checked (see below), a 0Bh hex code based-error message will be send instead.</p> <p><b>Value Range:</b> 0 ~ 5.</p>

# 4G PoE IIoT Gateway

<b>0Bh Exception</b>	The box is unchecked by default.	Check the <b>Enable</b> box to enable gateway to send a 0Bh exception code message to Modbus Master to indicate that the slave device does not respond within the timeout interval.
<b>Tx Delay</b>	The box is unchecked by default.	Check the <b>Enable</b> box to activate to the minimum amount of time after receiving a response before the next message can be sent out. When Tx Delay is enabled the Gateway would insert a Tx delay between Master requests. The delay gives sufficient time for the slave devices to turn their transmitters off and their receivers back on.

## Setup TCP/IP Connection for Receiving Modbus Master Request

The following Modbus TCP Configuration items allow user to set up the TCP connection settings so that the remote Modbus Master can access to the Modbus gateway. Besides, it also allows user to specify authorized masters on the TCP network.

Item	Value setting	Description
<b>TCP Connection Idle Time</b>	1. <b>300</b> is set by default 2. Range 1 to 65535	Enter the idle timeout in seconds. If the gateway does not receive another TCP request before the idle timeout elapsed, the TCP session will be terminated automatically. <b>Value Range:</b> 1 ~ 65535.
<b>Maximum TCP Connections</b>	1. 4 is set by default 2. Range 1 to 4	Enter the allowed maximum simultaneous TCP connections. <b>Value Range:</b> 1 ~ 4.
<b>TCP Keep-alive</b>	The box is unchecked by default.	Check the <b>Enable</b> box to ensure to keep the TCP session connected.
<b>Modbus Master IP Access</b>	<b>Allow All</b> is selected by default.	Specify authorized masters on the TCP network. Select <b>Allow All</b> to allow any Modbus Master to reach the attached Slave(s). Otherwise, limit only specific Master to reach the Slave(s) by selecting <b>Specific IPs</b> . When <b>Specific IPs</b> is selected, a Trusted IP Definition dialog will appear.

## Specify Trusted Modbus Masters on the TCP network

When **Specific IPs** is selected, user has to specify the Master(s) by their IP addresses to reach the serially attached Slave(s).

▶ Modbus Master IP Access	Specific IPs ▼																				
▶ Trusted IP Definition	<table><thead><tr><th>ID</th><th>Source IP</th><th>Enable</th><th>Action</th></tr></thead><tbody><tr><td>1</td><td>Specific IP Address ▼ <input type="text"/></td><td><input type="checkbox"/></td><td>Edit</td></tr><tr><td>2</td><td><input type="text"/></td><td><input type="checkbox"/></td><td>Edit</td></tr><tr><td>3</td><td><input type="text"/></td><td><input type="checkbox"/></td><td>Edit</td></tr><tr><td>4</td><td><input type="text"/></td><td><input type="checkbox"/></td><td>Edit</td></tr></tbody></table>	ID	Source IP	Enable	Action	1	Specific IP Address ▼ <input type="text"/>	<input type="checkbox"/>	Edit	2	<input type="text"/>	<input type="checkbox"/>	Edit	3	<input type="text"/>	<input type="checkbox"/>	Edit	4	<input type="text"/>	<input type="checkbox"/>	Edit
ID	Source IP	Enable	Action																		
1	Specific IP Address ▼ <input type="text"/>	<input type="checkbox"/>	Edit

<b>Enable</b>	Unchecked by default	Check the <b>Enable</b> box to enable the priority settings.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.

## Specify Modbus TCP Slave device(s)

If there is a Modbus Master device is attached to a certain serial port of the Modbus Gateway, user has to further specify the Modbus TCP Slave device(s) to send requests to from the attached Modbus RTU/ASCII Master device.

Modbus TCP Slave List for SPort-0 <span>Add</span> <span>Delete</span>					
ID	IP	Port	ID Range	Enable	Actions

When the **Add** button is applied, a **Modbus TCP Slave Configuration** screen will appear.

Modbus TCP Slave Configuration for SPort-0	
Item	Setting
▶ IP	<input type="text"/>
▶ Port	<input type="text"/> (1~65535)
▶ ID Range	<input type="text"/> (1~247) ~ <input type="text"/> (1~247)
▶ Enable	<input type="checkbox"/>

Modbus Remote Slave Configuration		
Item	Value setting	Description
<b>IP</b>	A Must fill setting	Enter the IP address of the remote Modbus TCP Slave device.
<b>Port</b>	1. A Must fill setting 2. Range 1 to 65535	Enter the TCP port on which the remote Modbus TCP Slave device listens (to the TCP client session request). <b><u>Value Range: 1 ~ 65535.</u></b>
<b>ID Range</b>	Range 1 to 247	Enter the Modbus ID range for the Modbus TCP Slave(s) that will respond to the Master's request. In addition to specify the Slave IP and Port, for accessing those Remote Modbus RTU Slave(s) located behind another Modbus Gateway, user has to specify the Modbus ID range of the Modbus RTU Slave(s). <b><u>Value Range: 1 ~ 247.</u></b>
<b>Enable</b>	It is unchecked by default.	Check the <b>Enable</b> box to enable this rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.

# 4G PoE IIoT Gateway

## Supported Function Code for Integrated Modbus Slave

This setting can setup the Gateway as a standalone Modbus Slave Device. Local SCADA Management System can treat the Gateway as a Slave device, and hence is able to read its information for device monitoring.

Currently, the integrated Modbus Slave device supports the following commands for accessing the 3G/4G Modem Status of the Gateway.

**Function Code:** 0x03(/Read). 0x06(/Write)

**Address:** 0 ~ 9999

Register Address	Register Name	R / W	Register Range / Description
0	WAN-1 Connection Status	R	0 ~ 6, 0=Disconnected, 1=Connecting..., 2=Connected, 3=Disconnecting..., 5=Wait for Traffic..., 6=Disconnected
1	WAN-2 Connection Status	R	0 ~ 6, 0=Disconnected, 1=Connecting..., 2=Connected, 3=Disconnecting..., 5=Wait for Traffic..., 6=Disconnected
2	WAN-3 Connection Status	R	0 ~ 6, 0=Disconnected, 1=Connecting..., 2=Connected, 3=Disconnecting..., 5=Wait for Traffic..., 6=Disconnected
3	WAN-4 Connection Status	R	0 ~ 6, 0=Disconnected, 1=Connecting..., 2=Connected, 3=Disconnecting..., 5=Wait for Traffic..., 6=Disconnected
10	3G/4G_SERVICE_TYPE	R	0 ~ 7, 0=2G, 1=none, 2=3G, 3=3.5G, 4~6=3.75G, 7=LTE
11	3G/4G_LINK_STATUS	R	0 ~ 6, 0=Disconnected, 1=Connecting..., 2=Connected, 3=Disconnecting..., 5=Wait for Traffic..., 6=Disconnected

9999	System_Reboot	W	Set 1 for System reboot.

## 4.2 Data Logging

Data logging is the process of collecting and storing data over a period of time in order to analyze specific trends or record the data-based events/actions of a system, or connected devices. Data logging function is a very useful and also important feature for SCADA telemetry; it makes the monitoring and analyzing tasks easier by checking the status and historical data during whole data acquisition period.

Even facing the network connection problems with remote NOC/SCADA side, you can also enable the data logging proxy function provided by the purchased gateway and keep doing the data acquisition and storing the collected data in local storage (in .CSV file format). When the network connection recovered, admin/user can download the data log files manually via FTP or web UI for further reference and maintenance.

The Modbus Cellular Gateway provides a complete data logging function for collecting the Modbus transaction data for application requirements. There are some data logging schemes to meet different management requirements. They are the Sniffer Mode, Offline Proxy Mode, Full-Time Proxy Mode, and the mixed modes for sniffer and proxy combinations.

With the Sniffer mode enabled, the gateway will monitor and record the communication among a specific Modbus Master and related slaves. It will store the Modbus communication as log files and administrator can check what Modbus communication went over the Modbus gateway, and if there is any communication loss

# 4G PoE IIoT Gateway

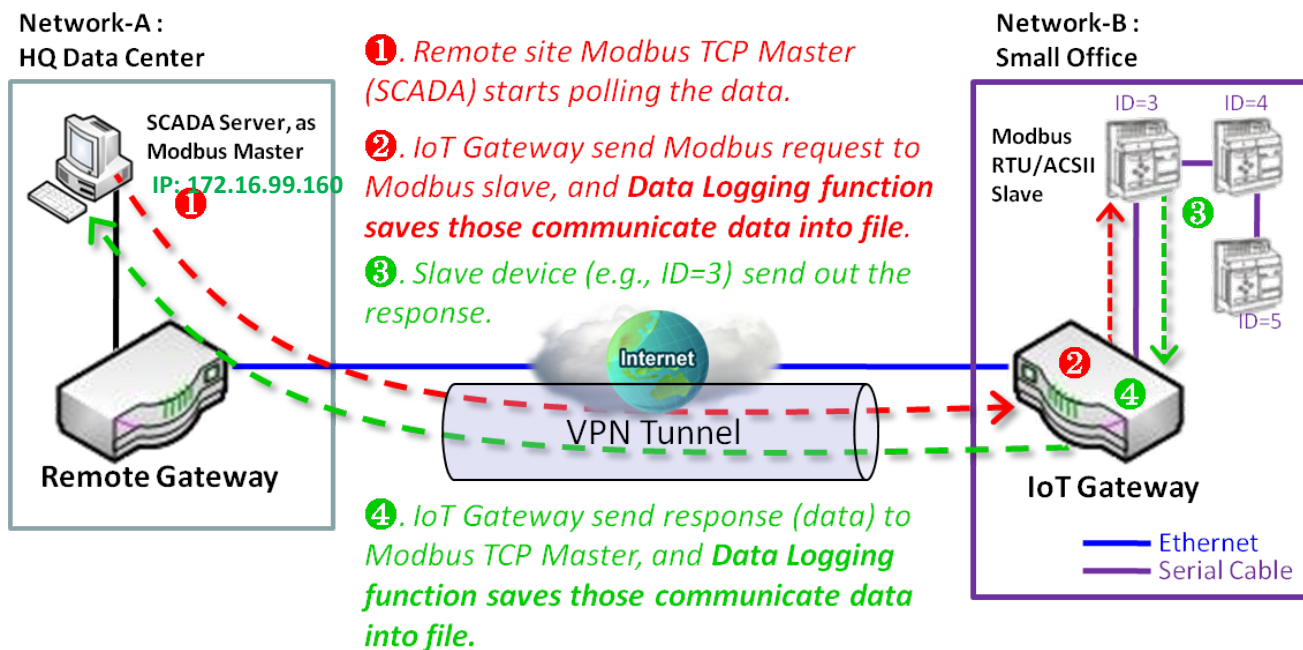

among the Master and Slave sides or not.

However, if there is any network connection problem between the Modbus gateway and remote NOC/SCADA, the remote Modbus server can't reach the Slave devices attached to the Modbus gateway, and consequently, nothing can be monitored and stored under such situation.

With the Proxy mode option enabled, when the Modbus gateway lost the connection with specified Modbus server, it will take over the data acquisition task and keep collecting the required data from Slave devices automatically. Once the connection is recovered, the Modbus gateway may stop the data log proxy function. Remote Modbus server can keep its data acquisition process, and if required, the administrator can also get the stored data log files to tell if everything goes well or not.

Under the Data Logging Proxy mode, user has to create some data acquisition rules via "Proxy Mode Rule Configuration" for collecting the Slave devices data by the Gateway when required. Once the network connection to remote SCADA was lost unexpectedly, the Data Logging Proxy function will be triggered and begin to do the data polling tasks by those pre-defined rules running in background.

## ➤ Scenario for Sniffer Mode Data Logging

As Illustrated in the diagram, the Modbus gateway will store the following Modbus activities into a log file.

- The Modbus request sent from Remote Modbus TCP Master.
- The response (data) that sent out from the polled Slave device (ID=3)

## ➤ Scenario for Off-Line Proxy Mode Data Logging

# 4G PoE IIoT Gateway

Network-A :  
HQ Data Center

- ❶ To do the Data-Acquisition by IoT Gateway itself automatically.
- ❷ Save those data as files to internal or external storage unit (e.g., Micro-SD card) .
- ❸ Data Logging Files Downloading via FTP or WEB UI.

Network-B :  
Small Office

As illustrated, when the connection to a remote Modbus Master broken, the Modbus Gateway will activate the data logging proxy function and execute the pre-defined data acquisition task by itself.

- The Modbus request issued by the Modbus Gateway (Data Logging Proxy).
- The response (data) that sent out from the polled Slave device (ID=3)

Repeat above data acquisition and data logging activities on every 5 sec interval until the connection recovered.

# 4G PoE IIoT Gateway

## 4.2.1 Data Logging Configuration

Data Logging is commonly used in monitoring systems to collect and analyze the field data. With proper configuration, the Gateway will record Modbus messages according to the specified rule list.

Go to **Field Communication > Data Logging > Configuration** tab.

### Enable Data Logging

 Configuration  

Item	Setting
▶ Data Logging	<input type="checkbox"/> Enable
▶ Storage Device	External ▼

Configuration		
Item	Value setting	Description
Data Logging	The box is unchecked by default.	Check the <b>Enable</b> box to activate to data logging function.
Storage Device	<b>External</b> is set by default	Choose the sotrage device to store the log files. It can be <b>External</b> or <b>Internal</b> , depends on the product specification.
Save	NA	Click the <b>Save</b> button to save the settings.

Note:

1. If there is no available storage device, the Enable checkbox will be grayed, and you can't enable it for the data logging. That is, if you selected External Storage, plug-in the storage first, and then enable the function and also make the required configuration.
2. Make sure the Modbus Operation Mode is selected and enabled, or there will be no Modbus transactions to be logged. Please refer to **Field Communication > Bus & Protocol > Port Configuration** and **Modbus** tabs.

### Create/Edit Modbus Proxy Rules

The Gateway allows you to customize your proxy mode rule list. It supports up to a maximum of 20 rules.

 Modbus Proxy Rule List    

ID	Name	Modbus Slave Type	Slave ID	Function Code	Start Address	Number of Coils/Registers	Polling Rate (ms)	Actions
----	------	-------------------	----------	---------------	---------------	---------------------------	-------------------	---------

When the **Add** button is applied, **Modbus Proxy Rule Configuration** screen will appear.

## 4.2.2 Scheme Setup

There are five data logging schemes to meet different management requirements. They are the Sniffer Mode, Offline Proxy Mode, Full-Time Proxy Mode, and the mixed modes for sniffer and proxy combinations. User has to configure the required data logging rules with selected scheme in this Scheme Setup page.

Go to **Field Communication > Data Logging > Scheme Setup** tab.

### Create/Edit Data Logging Rules

Scheme List <span>Add</span> <span>Delete</span>							
ID	Name	Mode	Master Type	Master Query Timeout (sec)	Proxy Rules	Enable	Actions

When the **Add** button is applied, **Scheme Configuration** screen will appear.

Scheme Configuration <span>Save</span> <span>Undo</span>	
Item	Setting
▶ Name	<input type="text"/>
▶ Mode	<span>Sniffer</span> ▼
▶ Master Type	<span>IP Address</span> ▼ <input type="text"/>
▶ Enable	<input type="checkbox"/>

Scheme Configuration		
Item	Value setting	Description
<b>Name</b>	A Must filled setting.	Specify a name as the identifier of the data logging rule. <b>Value Range:</b> 1 ~ 16 characters.
<b>Mode</b>	<b>Sniffer</b> is selected by default.	Select an expected data logging scheme for the data logging rule. There are five available schemes : <b>Sniffer</b> : The Modbus gateway will record all the Modbus transctions between the Master and Slave devices. <b>Off-Line Proxy</b> : When the connection between the Modbus gateway and Master is lost, the pre-defined proxy rule will be triggered and the Modbus gateway will issue specified function code to collect and record the data / status from the slave devices <b>Full-Time Proxy</b> : The pre-defined proxy rule will be triggered all the time and the Modbus gateway will issue specified function code to collect and record the data / status from the slave devices <b>Sniffer &amp; Off-Line Proxy</b> : This is a mixed mode for both Sniffer and Off-Line Proxy modes. <b>Sniffer &amp; Full-Time Proxy</b> : This is a mixed mode for both Sniffer and Full-Time Proxy modes.

## 4G PoE IIoT Gateway

<b>Master Type</b>	<b>IP Address</b> is selected by default.	Specify the Modbus master device to apply with the data logging rule. It can be <b>IP Address</b> for Modbus TCP master, or <b>Local Serial Port</b> for local attached Modbus RTU/ASCII master.
<b>Master Query Timeout (sec.)</b>	1. An Optional setting. 2. <b>60</b> sec is set by default 3. Range 1 to 99999	Specify the timeout value for querying Modbus Master. If no response from the master for the specified timeout setting, selected proxy rule will be triggered and applied with the data logging rule. Note: If Off-Line proxy scheme is selected, the timeout setting will be used to check. Otherwise, it is a don't care value.
<b>Proxy Rules</b>	An Optional setting.	Select the Proxy rule to be applied with the data logging rule. Note: If any proxy scheme is selected, please create the required Proxy rules in advance, and select from the list.
<b>Enable</b>	The box is unchecked by default.	Check the box to activate the data logging rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the changes.

## 4.2.3 Log File Management

There are five data logging schemes to meet different management requirements. They are the Sniffer Mode, Off-Line Proxy Mode, Full-Time Proxy Mode, and the mixed modes for sniffer and proxy combinations. User has to configure the required data logging rules with selected scheme in this Scheme Setup page.

Go to **Field Communication > Data Logging > Log File Management** tab.

If user had created data log rules in the **Field Communication > Data Logging > Scheme Setup** tab, there will be a log file list shown in the following Log File list screen. The default Log File management settings will be applied if user didn't change it via the **Edit** button.

Log File List								
ID	Name	File Content Format	Split File by	Auto Upload	Log File Compression	Delete File After Upload	When Storage Full	Actions
1	Sniffer Log	Raw Data	200 KB	Disabled	N/A	N/A	Remove the Oldest	<div>Edit</div> <div>Download Log</div>

When the **Edit** button is applied, **Log File Configuration** screen will appear.

Log File List Configuration		Save	Undo	
Item	Setting			
File Content Format	Raw Data ▼			
Split File by	Size ▼ 200 KB ▼			
Auto Upload	<input checked="" type="checkbox"/> Enable --- Option --- ▼ <div>Add Object</div>			
Log File Compression	<input type="checkbox"/> Enable			
Delete File After Upload	<input type="checkbox"/> Enable			
When Storage Full	Remove the Oldest ▼			

Log File Configuration		
Item	Value setting	Description
Name	N/A	The name of corresponding data log rule will be displayed. The default log file name will be named as ' Name_yyyyMMddHHmmSS.csv '.
File Content Format	<b>Raw Data</b> is selected by default	Select the data format for the log files. It can be <b>Raw Data</b> , or <b>Modbus Type</b> .
Split File by	<b>Size</b> and <b>200 KB</b> are set by default	Specify the split file methodology. It can be by <b>Size</b> , or by <b>Time Interval</b> . User has to dpecify a certain file size or time interval for splitting the data logs into a series of files. <b>Value Range: 1 ~ 99999.</b>
Auto Upload	1. An Optional filled setting 2. The box is unchecked	Check the <b>Enable</b> box to activate the auto upload function for logged files. Once been enabled, user has to specify an external FTP server from the dropdown list for auto uploading the log files to the server. Refer to <b>Object</b>

## 4G PoE IIoT Gateway

	by default.	<b>Definition &gt; External Server &gt; External Server</b> tab, or create the FTP server with the <b>Add Object</b> button.
<b>Log File Compression</b>	1. An Optional filled setting 2. The box is unchecked by default	If Auto Upload is activated, user can further specify whether to compress the log file prior it is uploaded or not. Check the <b>Enable</b> button to activate the Log File Compression function...
<b>Delete File After Upload</b>	1. An Optional filled setting 2. The box is unchecked by default	If Auto Upload is activated, user can further specify whether to delete the transferred log from the gateway storage or not. Check the <b>Enable</b> button to activate the function.
<b>When Storage Full</b>	<b>Remove the Oldest</b> is selected by default	Specify the operation to take when the storage is full. It can be <b>Remove the Oldest</b> log file, or <b>Stop Recording</b> . When <b>Remove the Oldest</b> is selected, the gateway will delete the oldest file once the storage is full, and keep on the data logging activity; When <b>Stop Recording</b> is selected, the gateway will stop the data logging activity once the storage is full.
<b>Save</b>	NA	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	NA	Click the <b>Undo</b> button to cancel the changes.

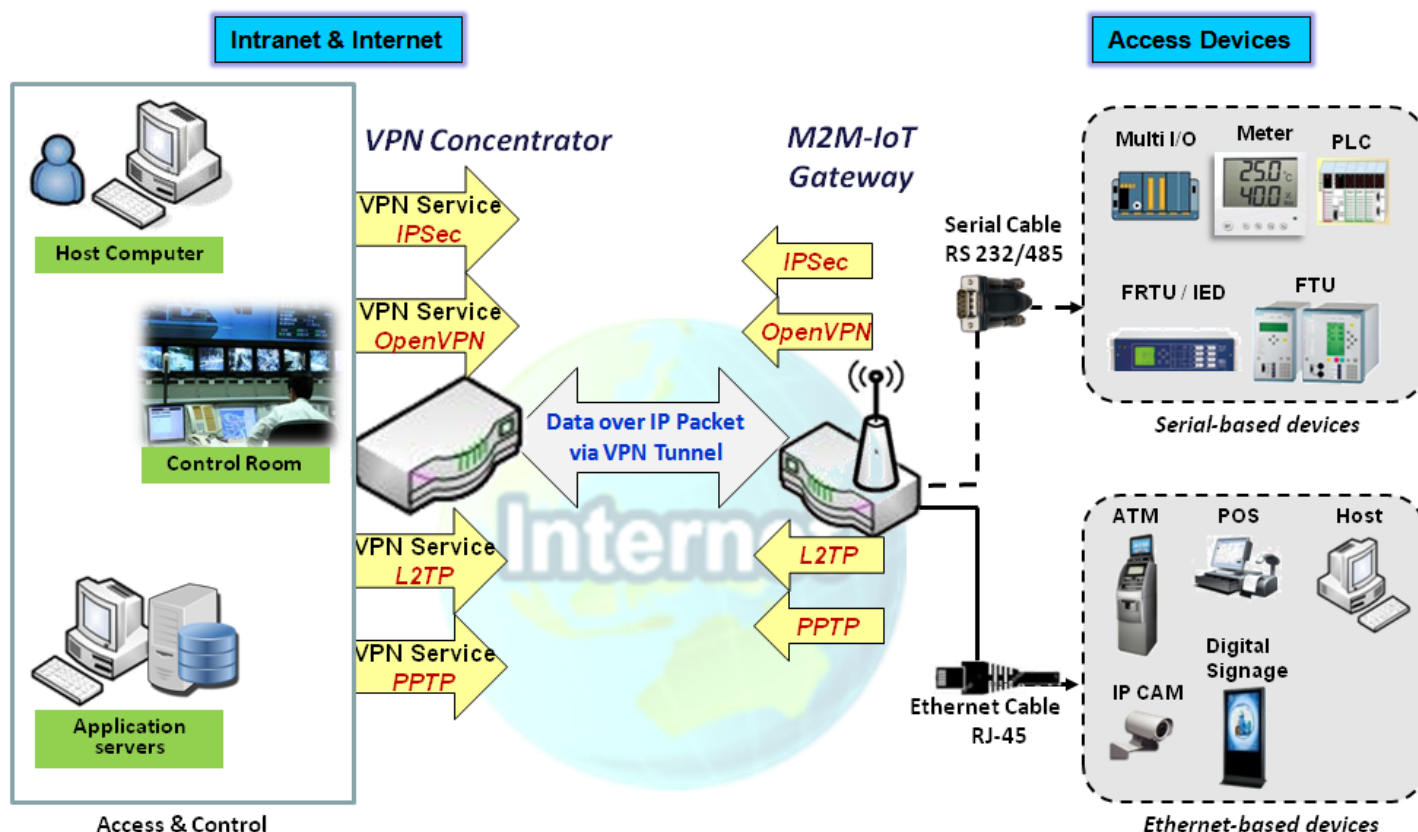

When the **Download Log** button is applied, the web browser will download a file named as 'log.tar' to the managing host computer.

## Chapter 5 Security

### 5.1 VPN

A virtual private network (VPN) extends a private network across a public network, such as the Internet. It enables a computer to send and receive data across shared or public networks as if it were directly connected to the private network, while benefitting from the functionality, security and management policies of the private network. This is done by establishing a virtual point-to-point connection through the use of dedicated connections, encryption, or a combination of the two. The tunnel technology supports data confidentiality, data origin authentication and data integrity of network information by utilizing encapsulation protocols, encryption algorithms, and hashing algorithms.

The product series supports different tunneling technologies to establish secure tunnels between multiple sites for data transferring, such as IPsec, OpenVPN, L2TP (over IPsec), PPTP and GRE. Besides, some advanced functions, like Full Tunnel, Tunnel Failover, Tunnel Load Balance, NetBIOS over IPsec, NAT Traversal and Dynamic VPN, are also supported.

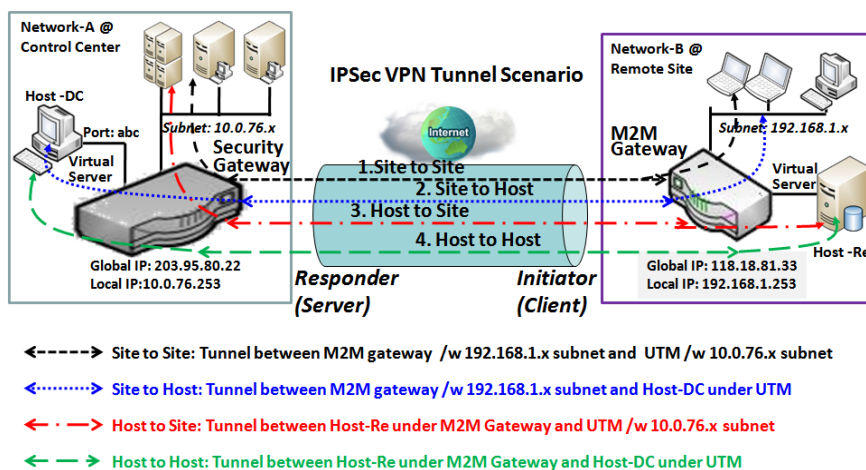

# 4G PoE IIoT Gateway

## 5.1.1 IPSec

Internet Protocol Security (IPSec) is a protocol suite for securing Internet Protocol (IP) communications by authenticating and encrypting each IP packet of a communication session. IPSec includes protocols for establishing mutual authentication between agents at the beginning of the session and negotiation of cryptographic keys to be used during the session.

An IPSec VPN tunnel is established between IPSec client and server. Sometimes, we call the IPSec VPN client as the initiator and the IPSec VPN server as the responder. This gateway can be configured as different roles and establish number of tunnels with various remote devices. Before going to setup the VPN connections, you may need to decide the scenario type for the tunneling.

### IPSec Tunnel Scenarios

To build IPSec tunnel, you need to fill in remote gateway global IP, and optional subnet if the hosts behind IPSec peer can access to remote site or hosts. Under such configuration, there are four scenarios:

**Site to Site:** You need to setup remote gateway IP and subnet of both gateways. After the IPSec tunnel established, hosts behind both gateways can communication each other through the tunnel.

**Site to Host:** Site to Host is suitable for tunneling between clients in a subnet and an application server (host). As in the diagram, the clients behind the M2M gateway can access to the host "Host-DC" located in the control center through Site to Host VPN tunnel.

**Host to Site:** On the contrast, for a single host (or mobile user to) to access the resources located in an intranet, the Host to Site scenario can be applied.

**Host to Host:** Host to Host is a special configuration for building a VPN tunnel between two single hosts.

# 4G PoE IIoT Gateway

## IPSec Setting

Go to **Security > VPN > IPSec** tab.

The IPSec Setting allows user to create and configure IPSec tunnels.

### Enable IPSec

Configuration		
Item	Setting	
▶ IPSec	<input type="checkbox"/> Enable	
▶ Max. Concurrent IPSec Tunnels	16	

Configuration Window		
Item	Value setting	Description
<b>IPsec</b>	Unchecked by default	Click the <b>Enable</b> box to enable IPSec function.
<b>Max. Concurrent IPSec Tunnels</b>	Depends on Product specification.	The specified value will limit the maximum number of simultaneous IPSec tunnel connection. The default value can be different for the purchased model.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

### Create/Edit IPSec tunnel

Ensure that the IPSec enable box is checked to enable before further configuring the IPSec tunnel settings.

IPSec Tunnel List								
Add		Delete		Refresh				
ID	Tunnel Name	Interface	Remote Gateway	Remote Subnet	Status	Enable	Actions	

When **Add/Edit** button is applied, a series of configuration screens will appear. They are Tunnel Configuration, Local & Remote Configuration, Authentication, IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition. You have to configure the tunnel details for both local and remote VPN devices.

# 4G PoE IIoT Gateway

Tunnel Configuration	
Item	Setting
Tunnel	<input type="checkbox"/> Enable
Tunnel Name	IPSec #1
Interface	WAN1 ▼
Tunnel Scenario	Site-to-Site(Tunnel mode) ▼
Tunnel TCP MSS	Auto ▼ 0 (64~1500 Bytes)
Encapsulation Protocol	ESP ▼
IKE Version	v1 ▼

Tunnel Configuration Window		
Item	Value setting	Description
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to activate the IPSec tunnel
<b>Tunnel Name</b>	1. A Must fill setting 2. String format can be any text	Enter a tunnel name. Enter a name that is easy for you to identify. <b><u>Value Range:</u></b> 1 ~ 19 characters.
<b>Interface</b>	1. A Must fill setting 2. <b>WAN 1</b> is selected by default	Select the interface on which IPSec tunnel is to be established. It can be the available WAN and LAN interfaces.
<b>Tunnel Scenario</b>	1. A Must fill setting 2. <b>Site to site</b> is selected by default	Select an IPSec tunneling scenario from the dropdown box for your application. Select <b>Site-to-Site</b> , <b>Site-to-Host</b> , <b>Host-to-Site</b> , or <b>Host-to-Host</b> . If LAN interface is selected, only <b>Host-to-Host</b> scenario is available.  With <b>Site-to-Site</b> or <b>Site-to-Host</b> or <b>Host-to-Site</b> , IPSec operates in tunnel mode. The difference among them is the number of subnets. With <b>Host-to-Host</b> , IPSec operates in transport mode.
<b>Tunnel TCP MSS</b>	1. An optional setting 2. <b>Auto</b> is set by default	Select from the dropdown box to define the size of Tunnel TCP MSS. Select <b>Auto</b> , and all devices will adjust this parameter automatically. Select <b>Manual</b> , and specify an expected value for Tunnel TCP MSS. <b><u>Value Range:</u></b> 64 ~ 1500 bytes.
<b>Encapsulation Protocol</b>	1. A Must fill setting 2. <b>ESP</b> is selected by default	Select the Encapsulation Protocol from the dropdown box for this IPSec tunnel. Available encapsulations are <b>ESP</b> and <b>AH</b> .
<b>IKE Version</b>	1. A Must fill setting 2. <b>v1</b> is selected by default	Specify the IKE version for this IPSec tunnel. Select <b>v1</b> or <b>v2</b> .

# 4G PoE IIoT Gateway

Local & Remote Configuration				
Item	Setting			
▶ Local Subnet List	ID	Subnet IP Address	Subnet Mask	Actions
	1	<input type="text" value="192.168.66.0"/>	<input type="text" value="255.255.255.0(24)"/>	<input type="button" value="Delete"/>
	<input type="button" value="Add"/>			
▶ Remote Subnet List	ID	Subnet IP Address	Subnet Mask	Actions
	1	<input type="text"/>	<input type="text" value="255.255.255.0(24)"/>	<input type="button" value="Delete"/>
	<input type="button" value="Add"/>			
▶ Remote Gateway	<input type="text" value=""/> (IP Address/FQDN)			

## Local & Remote Configuration Window

Item	Value setting	Description
<b>Local Subnet List</b>	A Must fill setting	<p>Specify the Local Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete a Local Subnet.</p> <p>Note_1: When Dynamic VPN option in Tunnel Scenario is selected, there will be only one subnet available. Note_2: When Host-to-Site or Host-to-Host option in Tunnel Scenario is selected, Local Subnet will not be available. Note_3: When Hub and Spoke option in Hub and Spoke is selected, there will be only one subnet available.</p>
<b>Remote Subnet List</b>	A Must fill setting	<p>Specify the Remote Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete Remote Subnet setting.</p>
<b>Remote Gateway</b>	1. A Must fill setting. 2. Format can be a ipv4 address or FQDN	Specify the Remote Gateway.

Authentication	
Item	Setting
▶ Key Management	<input type="text" value="IKE+Pre-shared Key"/> <input type="button" value="(Min. 8 characters)"/>
▶ Local ID	Type: <input type="text" value="User Name"/> ID: <input type="text"/> (Optional)
▶ Remote ID	Type: <input type="text" value="User Name"/> ID: <input type="text"/>

## Authentication Configuration Window

Item	Value setting	Description
<b>Key Management</b>	1. A Must fill setting 2. Pre-shared Key 8 to 32 characters.	<p>Select Key Management from the dropdown box for this IPSec tunnel. <b>IKE+Pre-shared Key</b>: user needs to set a key (8 ~ 32 characters). <b>IKE+X.509</b>: user needs Certificate to authenticate. IKE+X.509 will be available only when Certificate has been configured properly. Refer to Certificate section of this manual and also <b>Object Definition &gt; Certificate</b> in web-based utility.</p>
<b>Local ID</b>	An optional setting	<p>Specify the Local ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Local ID and enter the User@FQDN.</p>

# 4G PoE IIoT Gateway

		Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
		Specify the Remote ID for this IPSec tunnel to authenticate.
<b>Remote ID</b>	An optional setting	Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers.
		Select <b>FQDN</b> for Local ID and enter the FQDN.
		Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN.
		Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number).
		Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.

# 4G PoE IIoT Gateway

IKE Phase	
Item	Setting
Negotiation Mode	Main Mode ▼
X-Auth	None ▼ X-Auth Account (Optional) User Name : <input type="text"/> Password : <input type="text"/>
Dead Peer Detection (DPD)	<input checked="" type="checkbox"/> Enable Timeout : <input type="text"/> 180 (seconds) Delay : <input type="text"/> 30 (seconds)
Phase1 Key Life Time	<input type="text"/> 3600 (seconds) (Max. 86400)

IKE Phase Window		
Item	Value setting	Description
Negotiation Mode	Main Mode is set by default default	Specify the Negotiation Mode for this IPSec tunnel. Select <b>Main Mode</b> or <b>Aggressive Mode</b> .
X-Auth	None is selected by default	Specify the X-Auth role for this IPSec tunnel. Select Server, Client, or None. Selected None no X-Auth authentication is required. Selected Server this gateway will be an X-Auth server. Click on the X-Auth Account button to create remote X-Auth client account. Selected Client this gateway will be an X-Auth client. Enter User name and Password to be authenticated by the X-Auth server gateway. Note: X-Auth Client will not be available for Dynamic VPN option selected in Tunnel Scenario.
Dead Peer Detection (DPD)	1. Checked by default 2. Default Timeout 180s and Delay 30s	Click <b>Enable</b> box to enable <b>DPD</b> function. Specify the <b>Timeout</b> and <b>Delay</b> time in seconds. <b>Value Range:</b> 0 ~ 999 seconds for <b>Timeout</b> and <b>Delay</b> .
Phase1 Key Life Time	1. A Must fill setting 2. Default 3600s 3. Max. 86400s	Specify the Phase1 Key Life Time. <b>Value Range:</b> 30 ~ 86400.

IKE Proposal Definition				
ID	Encryption	Authentication	DH Group	Definition
1	AES-128 ▼	SHA1 ▼	Group 2 ▼	<input checked="" type="checkbox"/> Enable
2	AES-128 ▼	MD5 ▼	Group 2 ▼	<input checked="" type="checkbox"/> Enable
3	DES ▼	SHA1 ▼	Group 2 ▼	<input checked="" type="checkbox"/> Enable
4	3DES ▼	SHA1 ▼	Group 2 ▼	<input checked="" type="checkbox"/> Enable

IKE Proposal Definition Window		
Item	Value setting	Description
IKE Proposal Definition	A Must fill setting	Specify the Phase 1 Encryption method. It can be DES / 3DES / AES-128 / AES-192 / AES-256.
		Specify the Authentication method. It can be None / MD5 / SHA1 / SHA2-256.
		Specify the DH Group. It can be None / Group1 / Group2 / Group5 / Group14 / Group15 / Group16 / Group17 / Group18.
		Check <b>Enable</b> box to enable this setting

# 4G PoE IIoT Gateway

IPSec Phase		
Item	Setting	
Phase2 Key Life Time	28800	(seconds) (Max. 86400)

## IPSec Phase Window

Item	Value setting	Description
Phase2 Key Life Time	1. A Must fill setting 2. 28800s is set by default 3. Max. 86400s	Specify the Phase2 Key Life Time in second. <u><b>Value Range:</b> 30 ~ 86400.</u>

IPSec Proposal Definition				
ID	Encryption	Authentication	PFS Group	Definition
1	AES-128 ▼	SHA1 ▼	Group 2 ▼	<input checked="" type="checkbox"/> Enable
2	AES-128 ▼	MD5 ▼		<input checked="" type="checkbox"/> Enable
3	DES ▼	SHA1 ▼		<input checked="" type="checkbox"/> Enable
4	3DES ▼	SHA1 ▼		<input checked="" type="checkbox"/> Enable

## IPSec Proposal Definition Window

Item	Value setting	Description
IPSec Proposal Definition	A Must fill setting	Specify the Encryption method. It can be DES / 3DES / AES-128 / AES-192 / AES-256. Note: None is available when Encapsulation Protocol is set as <b>AH</b> .  Specify the Authentication method. It can be None / MD5 / SHA1 / SHA2-256. Note: None and SHA2-256 are available only when Encapsulation Protocol is set as <b>ESP</b> ; they are not available for <b>AH</b> Encapsulation.  Specify the PFS Group. It can be None / Group1 / Group2 / Group5 / Group14 / Group15 / Group16 / Group17 / Group18.  Click <b>Enable</b> to enable this setting
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings
Back	N/A	Click <b>Back</b> to return to the previous page.

# 4G PoE IIoT Gateway

## Create/Edit Dynamic VPN Server List

Dynamic VPN List

Similar to create an IPSec VPN Tunnel for site/host to site/host scenario, when **Add / Edit** button is applied a series of configuration screen will appear. They are Tunnel Configuration, Local & Remote Configuration, Authentication, IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition. You have to configure the tunnel details for the gateway as a Dynamic VPN server.

Note: For the purchased gateway, you can configure one Dynamic VPN server for each WAN interface.

Tunnel Configuration	
Item	Setting
▶ Tunnel	<input type="checkbox"/> Enable
▶ Tunnel Name	<input type="text" value="Dynamic IPSec1"/>
▶ Interface	<input type="text" value="WAN1"/>
▶ Tunnel Scenario	<input type="text" value="Tunnel Mode"/>
▶ Encapsulation Protocol	<input type="text" value="ESP"/>
▶ IKE Version	<input type="text" value="v1"/>

Tunnel Configuration Window		
Item	Value setting	Description
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to activate the Dynamic IPSec VPN tunnel.
<b>Tunnel Name</b>	1. A Must fill setting 2. String format can be any text	Enter a tunnel name. Enter a name that is easy for you to identify. <b><u>Value Range:</u></b> 1 ~ 19 characters.
<b>Interface</b>	1. A Must fill setting 2. <b>WAN 1</b> is selected by default	Select WAN interface on which IPSec tunnel is to be established.
<b>Tunnel Scenario</b>	1. A Must fill setting 2. <b>Tunnel Mode</b> is selected by default	Select the Dynamic IPSec tunneling scenario. It can be <b>Tunnel Mode</b> or <b>Transport Mode</b> .
<b>Encapsulation Protocol</b>	1. A Must fill setting 2. <b>ESP</b> is selected by default	Select the Encapsulation Protocol from the dropdown box for this IPSec tunnel. Available encapsulations are <b>ESP</b> and <b>AH</b> .
<b>IKE Version</b>	1. A Must fill setting 2. <b>v1</b> is selected by default	Specify the IKE version for this IPSec tunnel.

Local & Remote Configuration	
Item	Setting
▶ Local Subnet	<input type="text" value="192.168.66.0"/>
▶ Local Netmask	<input type="text" value="255.255.255.0(24)"/>

### Local & Remote Configuration Window

# 4G PoE IIoT Gateway

Item	Value setting	Description
<b>Local Subnet</b>	A Must fill setting	Specify the Local Subnet IP address.
<b>Local Netmask</b>	A Must fill setting	Specify the Local Subnet Mask.

Authentication	
Item	Setting
▶ Key Management	IKE+Pre-shared Key ▼ <input type="text"/> (Min. 8 characters)
▶ Local ID	Type: User Name ▼ ID: <input type="text"/> (Optional)
▶ Remote ID	Type: User Name ▼ ID: <input type="text"/>

Authentication Configuration Window		
Item	Value setting	Description
<b>Key Management</b>	1. A Must fill setting 2. Pre-shared Key 8 to 32 characters.	Select Key Management from the dropdown box for this IPSec tunnel. <b>IKE+Pre-shared Key</b> : user needs to set a key (8 ~ 32 characters).
<b>Local ID</b>	An optional setting	Specify the Local ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Local ID and enter the User@FQDN. Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
<b>Remote ID</b>	An optional setting	Specify the Remote ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN. Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number). Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.

For the rest IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition settings, they are the same as that of creating an IPSec Tunnel described in previous section. Please refer to the related description.

# 4G PoE IIoT Gateway

## 5.1.2 OpenVPN

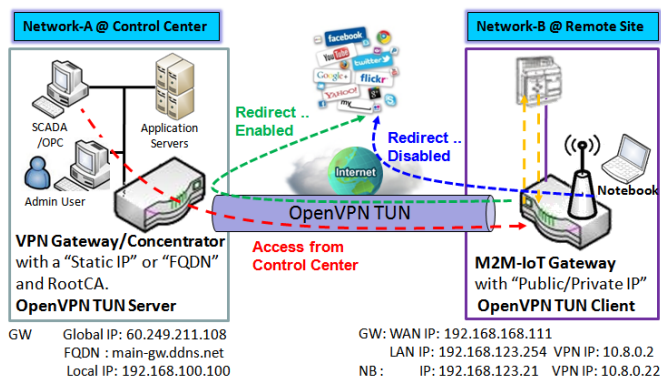

OpenVPN is an application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. It uses a custom security protocol that utilizes SSL/TLS for key exchange. It is capable of traversing network address translators (NATs) and firewalls.

OpenVPN allows peers to authenticate each other using a Static Key (pre-shared key) or certificates. When used in a multi-client-server configuration, it allows the server to release an authentication certificate for every client, using signature and certificate authority. It uses the OpenSSL encryption library extensively, as well as the SSLv3/TLSv1 protocol, and contains many security and control features.

OpenVPN Tunneling is a Client and Server based tunneling technology. The OpenVPN Server must have a Static IP or a FQDN, and maintain a Client list. The OpenVPN Client may be a mobile user or mobile site with public IP or private IP, and requesting the OpenVPN tunnel connection. The product supports both OpenVPN Server and OpenVPN Client features to meet different application requirements.

There are two OpenVPN connection scenarios. They are the TAP and TUN scenarios. The product can create either a layer-3 based IP tunnel (TUN), or a layer-2 based Ethernet TAP that can carry any type of Ethernet traffic. In addition to configuring the device as a Server or Client, you have to specify which type of OpenVPN connection scenario is to be adopted.

### OpenVPN TUN Scenario

1. M2M-IoT Gateway (as OpenVPN TUN Client) connects to peer VPN Gateway/Concentrator (as OpenVPN TUN Server).
2. M2M-IoT Gateway will be assigned 10.8.0.2 IP Address after OpenVPN TUN Connection established. (10.8.0.x is a virtual subnet)
3. Local networked device will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection (when NAT disabled & Redirect Internet Traffic enabled).
4. SCADA Server in Control Center can access remote attached device(s) with the assigned IP Address 10.8.0.2.

solution.

The term "TUN" mode is referred to routing mode and operates with layer 3 packets. In routing mode, the VPN client is given an IP address on a different subnet than the local LAN under the OpenVPN server. This virtual subnet is created for connecting to any remote VPN computers. In routing mode, the OpenVPN server creates a "TUN" interface with its own IP address pool which is different to the local LAN. Remote hosts that dial-in will get an IP address inside the virtual network and will have access only to the server where OpenVPN resides.

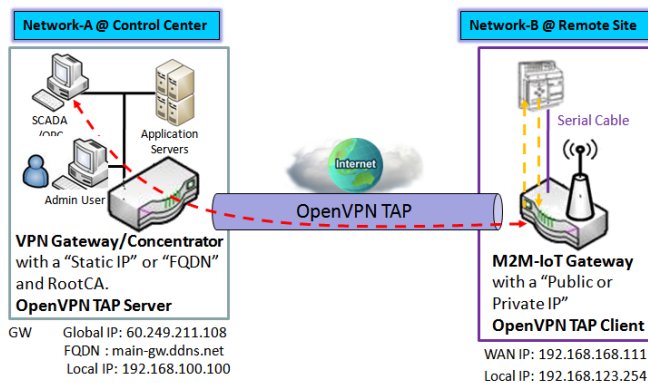

If you want to offer remote access to a VPN server from client(s), and inhibit the access to remote LAN resources under VPN server, OpenVPN TUN mode is the simplest

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TUN Client, and connects to an

# 4G PoE IIoT Gateway

OpenVPN UN Server. Once the OpenVPN TUN connection is established, the connected TUN client will be assigned a virtual IP (10.8.0.2) which is belong to a virtual subnet that is different to the local subnet in Control Center. With such connection, the local networked devices will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection when Redirect Internet Traffic settings is enabled; Besides, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (10.8.0.2).

## OpenVPN TAP Scenario

1. M2M-IoT Gateway (as OpenVPN TAP Client) connects to peer VPN Gateway/Concentrator (as OpenVPN TAP Server).
2. M2M-IoT Gateway will be assigned **192.168.100.210** IP Address after OpenVPN TAP Connection established. (**same subnet as in Control Center**)
3. SCADA Server in Control Center can access remote attached device(s) with the assigned IP Address 192.168.100.210.

The term "TAP" is referred to bridge mode and operates with layer 2 packets. In bridge mode, the VPN client is given an IP address on the same subnet as the LAN resided under the OpenVPN server. Under such configuration, the OpenVPN client can directly access to the resources in LAN. If you want to offer remote access to the entire remote LAN for VPN client(s), you have to setup OpenVPN in "TAP" bridge mode.

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TAP Client, and connects to an OpenVPN TAP Server. Once the OpenVPN TAP connection is established, the connected TAP client will be assigned a virtual IP (192.168.100.210) which is the same subnet as

that of local subnet in Control Center. With such connection, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (192.168.100.210).

# 4G PoE IIoT Gateway

## Open VPN Setting

Go to **Security > VPN > OpenVPN** tab.

The OpenVPN setting allows user to create and configure OpenVPN tunnels.

### Enable OpenVPN

Enable OpenVPN and select an expected configuration, either server or client, for the gateway to operate.

Configuration	
Item	Setting
OpenVPN	<input checked="" type="checkbox"/> Enable
Server / Client	Server ▼

Configuration		
Item	Value setting	Description
OpenVPN	The box is unchecked by default	Check the <b>Enable</b> box to activate the OpenVPN function.
Server/ Client	Server Configuration is selected by default.	When <b>Server</b> is selected, as the name indicated, server configuration will be displayed below for further setup. When <b>Client</b> is selected, you can specify the client settings in another client configuration window.

# 4G PoE IIoT Gateway

## As an OpenVPN Server

If **Server** is selected, an OpenVPN Server Configuration screen will appear. **OpenVPN Server Configuration** window can let you enable the OpenVPN server function, specify the virtual IP address of OpenVPN server, when remote OpenVPN clients dial in, and the authentication protocol.

Configuration

Item	Setting
OpenVPN	<input checked="" type="checkbox"/> Enable
Server / Client	Server ▼
OpenVPN Configuration file	<input type="checkbox"/> Enable <input type="button" value="Export"/> client.ovpn

Configuration

Item	Value setting	Description
<b>OpenVPN Configuration File</b>	1. An Optional setting. 2. The box is unchecked by default.	Click the <b>Enable</b> box to activate the export feature of OpenVPN Client configuration to a .ovpn file. You have to further click the <b>Export</b> button to get the configuration file.

The OpenVPN Server supports up to 4 TUN / TAP tunnels at the same time.

OpenVPN Server Configuration

Item	Setting
OpenVPN Server	<input type="checkbox"/> Enable

# 4G PoE IIoT Gateway

OpenVPN Server Configuration		
Item	Value setting	Description
<b>OpenVPN Server</b>	The box is unchecked by default.	Click the <b>Enable</b> to activate OpenVPN Server functions.
<b>Protocol</b>	1. A Must filled setting 2. By default <b>TCP</b> is selected.	Define the selected <b>Protocol</b> for connecting to the OpenVPN Server. <ul style="list-style-type: none"> <li>• Select <b>TCP</b> , or <b>UDP</b> -&gt; The TCP protocol will be used to access the OpenVPN Server, and <b>Port</b> will be set as 4430 automatically.</li> <li>• Select <b>UDP</b> -&gt; The UDP protocol will be used to access the OpenVPN Server, and <b>Port</b> will be set as 1194 automatically.</li> </ul>
<b>Port</b>	1. A Must filled setting 2. By default <b>4430</b> is set.	Specify the <b>Port</b> for connecting to the OpenVPN Server. <b>Value Range:</b> 1 ~ 65535.
<b>Tunnel Scenario</b>	1. A Must filled setting 2. By default <b>TUN</b> is selected.	Specify the type of <b>Tunnel Scenario</b> for connecting to the OpenVPN Server. It can be <b>TUN</b> for TUN tunnel scenario, or <b>TAP</b> for TAP tunnel scenario.
<b>Authorization Mode</b>	1. A Must filled setting 2. By default <b>TLS</b> is selected.	Specify the authorization mode for the OpenVPN Server. <ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Server Cert.</b> and <b>DH PEM</b> will be displayed. <b>CA Cert.</b> could be generated in Certificate. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>. <b>Server Cert.</b> could be generated in Certificate. Refer to <b>Object Definition &gt; Certificate &gt; My Certificate</b>.</li> <li>• <b>Static Key</b> -&gt;The OpenVPN will use static key (pre-shared) authorization mode, and the following items <b>Local Endpoint IP Address</b>, <b>Remote Endpoint IP Address</b> and <b>Static Key</b> will be displayed. Note: Static Key will be available only when TUN is chosen in Tunnel Scenario.</li> </ul>
<b>Local Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Local Endpoint IP Address</b> of this OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Local Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Remote Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Remote Endpoint IP Address</b> of the peer OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Remote Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Static Key</b>	A Must filled setting	Specify the <b>Static Key</b> . Note: Static Key will be available only when Static Key is chosen in Authorization Mode.
<b>Server Virtual IP</b>	A Must filled setting	Specify the <b>Server Virtual IP</b> . <b>Value Range:</b> The IP format is 10.y.0.0, the range of y is 1~254. Note: Server Virtual IP will be available only when TLS is chosen in Authorization Mode.
<b>DHCP-Proxy Mode</b>	1. A Must filled setting 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>DHCP-Proxy Mode</b> . Note: DHCP-Proxy Mode will be available only when TAP is chosen in Tunnel Device.
<b>IP Pool</b>	A Must filled setting	Specify the virtual <b>IP pool</b> setting for the OpenVPN server. You have to specify the <b>Starting Address</b> and <b>Ending Address</b> as the IP address pool for the OpenVPN clients.

## 4G PoE IIoT Gateway

		Note: IP Pool will be available only when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled).
<b>Gateway</b>	A Must filled setting	Specify the <b>Gateway</b> setting for the OpenVPN server. It will be assigned to the connected OpenVPN clients. Note: Gateway will be available only when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled).
<b>Netmask</b>	By default - <b>select one</b> - is selected.	Specify the <b>Netmask</b> setting for the OpenVPN server. It will be assigned to the connected OpenVPN clients. <b><u>Value Range:</u> 255.255.255.0/24 (only support class C)</b>  Note_1: Netmask will be available when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled). Note_2: Netmask will also be available when TUN is chosen in Tunnel Device.
<b>Redirect Default Gateway</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Redirect Default Gateway</b> function.
<b>Encryption Cipher</b>	1. A Must filled setting. 2. By default <b>Blowfish</b> is selected.	Specify the <b>Encryption Cipher</b> from the dropdown list. It can be <b>Blowfish/AES-256/AES-192/AES-128/None</b> .
<b>Hash Algorithm</b>	By default <b>SHA-1</b> is selected.	Specify the <b>Hash Algorithm</b> from the dropdown list. It can be <b>SHA-1/MD5/MD4/SHA2-256/SHA2-512/None/Disable</b> .
<b>LZO Compression</b>	By default <b>Adaptive</b> is selected.	Specify the <b>LZO Compression</b> scheme. It can be <b>Adaptive/YES/NO/Default</b> .
<b>Persis Key</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Key</b> function.
<b>Persis Tun</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Tun</b> function.
<b>Advanced Configuration</b>	N/A	Click the <b>Edit</b> button to specify the <b>Advanced Configuration</b> setting for the OpenVPN server. If the button is clicked, <b>Advanced Configuration</b> will be displayed below.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>X</b> to cancel the changes and return to last page.

OpenVPN Client Configuration		
Item	Value setting	Description
<b>OpenVPN Client Name</b>	A Must filled setting	The <b>OpenVPN Client Name</b> will be used to identify the client in the tunnel list. <b>Value Range:</b> 1 ~ 32 characters.
<b>Interface</b>	1. A Must filled setting 2. By default <b>WAN-1</b> is selected.	Define the physical interface to be used for this OpenVPN Client tunnel.
<b>Protocol</b>	1. A Must filled setting 2. By default <b>TCP</b> is selected.	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"> <li>• Select <b>TCP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li> <li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li> </ul>
<b>Port</b>	1. A Must filled setting 2. By default <b>443</b> is set.	Specify the <b>Port</b> for the OpenVPN Client to use. <b>Value Range:</b> 1 ~ 65535.
<b>Tunnel Scenario</b>	1. A Must filled setting 2. By default <b>TUN</b> is selected.	Specify the type of <b>Tunnel Scenario</b> for the OpenVPN Client to use. It can be <b>TUN</b> for TUN tunnel scenario, or <b>TAP</b> for TAP tunnel scenario.
<b>Remote IP/FQDN</b>	A Must filled setting	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
<b>Remote Subnet</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate remote subnet function, and specify <b>Remote Subnet</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the remote subnet address and remote subnet mask.
<b>Redirect Internet Traffic</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Redirect Internet Traffic</b> function.
<b>NAT</b>	1. An Optional setting.	Check the <b>Enable</b> box to activate the <b>NAT</b> function.

## 4G PoE IIoT Gateway

	2. The box is checked by default.	
<b>Authorization Mode</b>	1. A Must filled setting 2. By default <b>TLS</b> is selected.	Specify the authorization mode for the OpenVPN Server. <ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Client Cert.</b> and <b>Client Key</b> will be displayed. <b>CA Cert.</b> could be selected in Trusted CA Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>. <b>Client Cert.</b> could be selected in Local Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; My Certificate</b>. <b>Client Key</b> could be selected in Trusted Client key List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>.</li> <li>• <b>Static Key</b> -&gt;The OpenVPN will use static key authorization mode, and the following items <b>Local Endpoint IP Address</b>, <b>Remote Endpoint IP Address</b> and <b>Static Key</b> will be displayed.</li> </ul>
<b>Local Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Local Endpoint IP Address</b> of this OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Local Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Remote Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Remote Endpoint IP Address</b> of the peer OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Remote Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Static Key</b>	A Must filled setting	Specify the <b>Static Key</b> . Note: Static Key will be available only when Static Key is chosen in Authorization Mode.
<b>Encryption Cipher</b>	By default <b>Blowfish</b> is selected.	Specify the <b>Encryption Cipher</b> . It can be <b>Blowfish/AES-256/AES-192/AES-128/None</b> .
<b>Hash Algorithm</b>	By default <b>SHA-1</b> is selected.	Specify the <b>Hash Algorithm</b> . It can be <b>SHA-1/MD5/MD4/SHA2-256/SHA2-512/None/Disable</b> .
<b>LZO Compression</b>	By default <b>Adaptive</b> is selected.	Specify the <b>LZO Compression</b> scheme. It can be <b>Adaptive/YES/NO/Default</b> .
<b>Persis Key</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Key</b> function.
<b>Persis Tun</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Tun</b> function.
<b>Advanced Configuration</b>	N/A	Click the <b>Edit</b> button to specify the <b>Advanced Configuration</b> setting for the OpenVPN server. If the button is clicked, <b>Advanced Configuration</b> will be displayed below.
<b>Tunnel</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this OpenVPN tunnel.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>X</b> to cancel the changes and return to last page.

Layer 2 Tunneling Protocol (L2TP) is a tunneling protocol used to support virtual private networks (VPNs) or as part of the delivery of services by ISPs. It does not provide any encryption or confidentiality by itself. Rather, it relies on an encryption protocol that it passes within the tunnel to provide privacy. This Gateway can behave as a L2TP server and a L2TP client both at the same time.

**L2TP Server:** It must have a static IP or a FQDN for clients to create L2TP tunnels. It also maintains “User Account list” (user name/ password) for client login authentication; There is a virtual IP pool to assign virtual IP to each connected L2TP client.

**L2TP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get “user name”, “password” and server’s global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide “Default Gateway” or “Remote Subnet” for packet flow. Moreover, you can also define what kind of traffics will pass through the L2TP tunnel in the “Default Gateway / Remote Subnet” parameter.

# 4G PoE IIoT Gateway

Besides, for the L2TP client peer, a Remote Subnet item is required. It is for the Intranet of L2TP server peer. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP tunnel. Others will be transferred based on current routing policy of the gateway at L2TP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the L2TP client peer, all packets, including the Internet accessing of L2TP client peer, will go through the established L2TP tunnel. That means the remote L2TP server peer controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the L2TP tunnel.

# 4G PoE IIoT Gateway

## L2TP Setting

Go to **Security > VPN > L2TP** tab.

The L2TP setting allows user to create and configure L2TP tunnels.

### Enable L2TP

Configuration	
Item	Setting

▶ Tunnel	<input type="checkbox"/> Enable

L2TP Client Configuration		
Item Setting	Value setting	Description
<b>Tunnel Name</b>	A Must filled setting	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range:</b> 1 ~ 32 characters.
<b>Interface</b>	A Must filled setting	Define the selected interface to be the used for this L2TP tunnel ( <b>WAN-1</b> is available only when WAN-1 interface is enabled) The same applies to other WAN interfaces (e.g. <b>WAN-2</b> ).
<b>L2TP over IPSec</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate L2TP over IPSec, and further specify a Pre-shared Key (8~32 characters).
<b>Remote LNS IP/FQDN</b>	A Must filled setting	Enter the public IP address or the FQDN of the L2TP server.
<b>MTU</b>	1.A Must filled setting 2.The value is 1500 by default	Specify the <b>MTU</b> . <b>Value Range:</b> 0 ~ 1500.
<b>Remote LNS Port</b>	1. A Must filled setting 2. <b>1701</b> is set by default	Enter the Remote LNS Port for this L2TP tunnel. <b>Value Range:</b> 1 ~ 65535.
<b>User Name</b>	A Must filled setting	Enter the <b>User Name</b> for this L2TP tunnel to be authenticated when connect to L2TP server. <b>Value Range:</b> 1 ~ 32 characters.
<b>Password</b>	A Must filled setting	Enter the <b>Password</b> for this L2TP tunnel to be authenticated when connect to L2TP server.
<b>Tunneling Password(Optional)</b>	An Optional filled setting	Enter the <b>Tunneling Password</b> for this L2TP tunnel to authenticate.
<b>Remote Subnet</b>	A Must filled setting	Specify the remote subnet for this L2TP tunnel to reach L2TP server. The Remote Subnet format must be IP address/netmask (e.g. 10.0.0.2/24). It is for the Intranet of L2TP VPN server. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP VPN tunnel. Others will be transferred based on current routing policy of the security gateway at L2TP client peer. If you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a default gateway setting for the L2TP client peer, all packets, including the Internet accessing of L2TP Client peer, will go through the established L2TP VPN tunnel. That means the remote L2TP VPN server controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the L2TP VPN tunnel.
<b>Authentication Protocol</b>	1. A Must filled setting 2. Unchecked by	Specify one ore multiple <b>Authentication Protocol</b> for this L2TP tunnel. Available authentication methods are <b>PAP / CHAP / MS-CHAP / MS-CHAP v2</b> .

## 4G PoE IIoT Gateway

	default	
<b>MPPE Encryption</b>	1. Unchecked by default 2. an optional setting	Specify whether L2TP server supports <b>MPPE Protocol</b> . Click the <b>Enable</b> box to enable MPPE. Note: when MPPE Encryption is enabled, the Authentication Protocol <b>PAP / CHAP</b> options will not be available.
<b>NAT before Tunneling</b>	1. A Must filled setting 2. Unchecked by default	Specify whether NAT is required or not for this L2TP tunnel.
<b>LCP Echo Type</b>	1. Auto is set by default	Specify the LCP Echo Type for this L2TP tunnel. It can be <b>Auto</b> , <b>User-defined</b> , or <b>Disable</b> . <b>Auto</b> : the system sets the Interval and Max. Failure Time. <b>User-defined</b> : enter the Interval and Max. Failure Time. The default value for Interval is 30 seconds, and Maximum Failure Times is 6 Times. <b>Disable</b> : disable the LCP Echo. <b>Value Range</b> : 1 ~ 99999 for Interval Time, 1~999 for Failure Time.
<b>Service Port</b>	A Must filled setting	Specify the <b>Service Port</b> for this L2TP tunnel to use. It can be <b>Auto</b> , <b>(1701) for Cisco</b> , or <b>User-defined</b> . <b>Auto</b> : The system determines the service port. <b>1701 (for Cisco)</b> : The system use port 1701 for connecting with CISCO L2TP Server. <b>User-defined</b> : Enter the service port. The default value is 0. <b>Value Range</b> : 0 ~ 65535.
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to enable this L2TP tunnel.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings.

----	-----------	----------	--------	---------

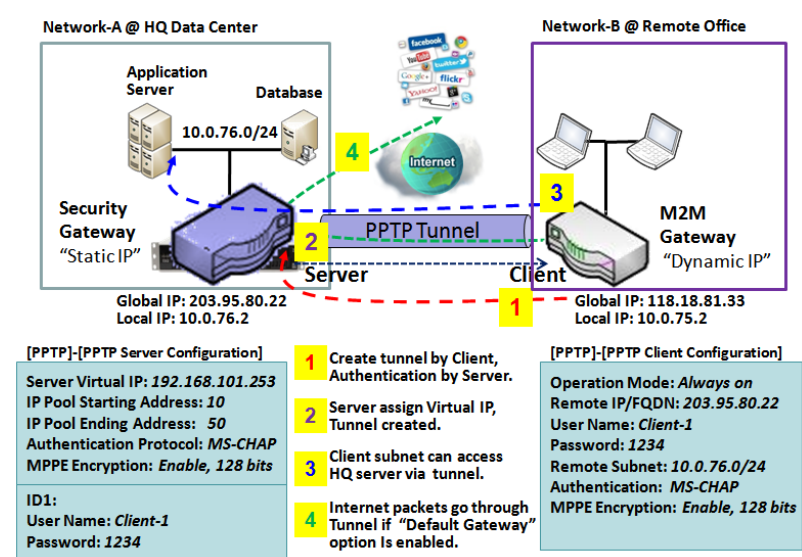

Point-to-Point Tunneling Protocol (PPTP) is a method for implementing virtual private networks. PPTP uses a control channel over TCP and a GRE tunnel operating to encapsulate PPP packets. It is a client-server based technology. There are various levels of authentication and encryption for PPTP tunneling, usually natively as standard features of the Windows PPTP stack. The security gateway can play either "PPTP Server" role or "PPTP Client" role for a PPTP VPN tunnel, or both at the same time for different tunnels. PPTP tunnel process is nearly the same as L2TP.

**PPTP Server:** It must have a static IP or a FQDN for clients to create PPTP tunnels. It also maintains "User Account list" (user name / password) for client login authentication; There is a virtual IP pool to assign virtual IP to each connected PPTP client. u

**PPTP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get "user name", "password" and server's global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide "Default Gateway" or "Remote Subnet" for packet flow. Moreover, you can also define what kind of traffics will pass through the PPTP tunnel in the "Default Gateway / Remote Subnet" parameter.

# 4G PoE IIoT Gateway

Certainly, those packets come through the PPTP tunnel.

Besides, for the PPTP client peer, a Remote Subnet item is required. It is for the Intranet of PPTP server peer. So, at PPTP client peer, the packets whose destination is in the dedicated subnet will be transferred via the PPTP tunnel. Others will be transferred based on current routing policy of the gateway at PPTP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the PPTP client peer, all packets, including the Internet accessing of PPTP client peer, will go through the established PPTP tunnel. That means the remote PPTP server peer controls the flow of any packets from the PPTP client peer.

## 5.1.5 GRE

Configuration

Item	Setting
GRE Tunnel	<input type="checkbox"/> Enable
Max. Concurrent GRE Tunnels	32

GRE Tunnel List

AddDelete

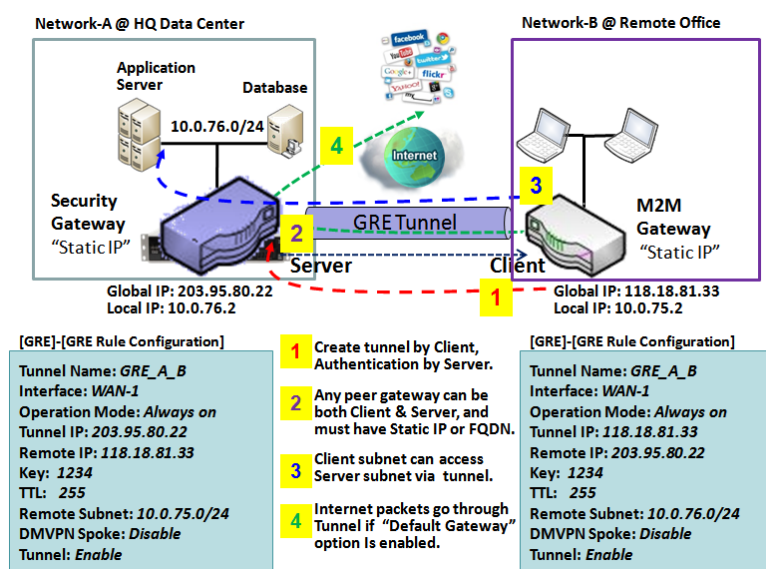

ID	Tunnel Name	Interface	Tunnel IP	Remote IP	MTU	Key	TTL	Remote Subnet	Enable	Actions
----	-------------	-----------	-----------	-----------	-----	-----	-----	---------------	--------	---------

Generic Routing Encapsulation (GRE) is a tunneling protocol developed by Cisco Systems that encapsulates a wide variety of network layer protocols inside virtual point-to-point links over an Internet Protocol internetwork.

Deploy a M2M gateway for remote site and establish a virtual private network with control center by using GRE tunneling. So, all client hosts behind M2M gateway can make data communication with server hosts behind control center gateway.

GRE Tunneling is similar to IPSec Tunneling, client requesting the tunnel establishment with the server. Both the client and the server must have a Static IP or a FQDN. Any peer gateway can be worked as either a client or a server, even using the same set of configuration rule.

### GRE Tunnel Scenario

To setup a GRE tunnel, each peer needs to setup its global IP as tunnel IP and fill in the other's global IP as remote IP.

Besides, each peer must further specify the Remote Subnet item. It is for the Intranet of GRE server peer. So, at GRE client peer, the packets whose destination is in the dedicated subnet will be transferred via the GRE tunnel. Others will be transferred based on current routing policy of the gateway at GRE client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the GRE client peer, all packets, including the Internet accessing of GRE client peer, will go through the established GRE

tunnel. That means the remote GRE server peer controls the flow of any packets from the GRE client peer. Certainly, those packets come through the GRE tunnel.

If the GRE server supports DMVPN Hub function, like Cisco router as the VPN concentrator, the GRE client can active the DMVPN spoke function here since it is implemented by GRE over IPSec tunneling.

# 4G PoE IIoT Gateway

## GRE Setting

Go to **Security > VPN > GRE** tab.

The GRE setting allows user to create and configure GRE tunnels.

### Enable GRE

Configuration		
Item	Setting	
GRE Tunnel	<input type="checkbox"/> Enable	
Max. Concurrent GRE Tunnels	32	

Enable GRE Window		
Item	Value setting	Description
GRE Tunnel	Unchecked by default	Click the <b>Enable</b> box to enable GRE function.
Max. Concurrent GRE Tunnels	Depends on Product specification.	The specified value will limit the maximum number of simultaneous GRE tunnel connection. The default value can be different for the purchased model.
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

### Create/Edit GRE tunnel

Packet Filter List

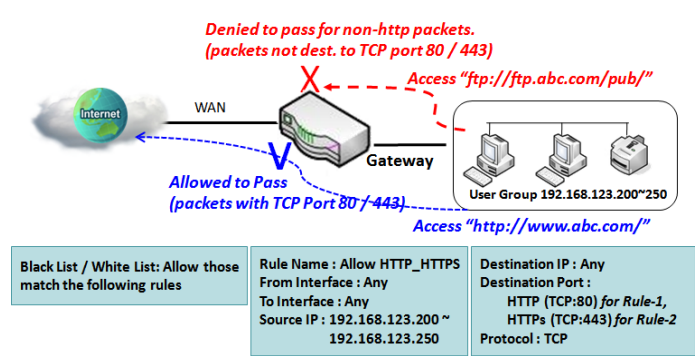

AddDelete

ID	Rule Name	From Interface	To Interface	Source IP	Destination IP	Source MAC	Protocol	Source Port	Destination Port	Time Schedule	Enable	Actions
----	-----------	----------------	--------------	-----------	----------------	------------	----------	-------------	------------------	---------------	--------	---------

# 4G PoE IIoT Gateway

"Packet Filter" function can let you define some filtering rules for incoming and outgoing packets. So the gateway can control what packets are allowed or blocked to pass through it. A packet filter rule should indicate from and to which interface the packet enters and leaves the gateway, the source and destination IP addresses, and destination service port type and port number. In addition, the time schedule to which the rule will be active.

## Packet Filter with White List Scenario

As shown in the diagram, specify "Packet Filter Rule List" as white list (*Allow those match the following rules*) and define the rules. Rule-1 is to allow HTTP packets to pass, and Rule-2 is to allow HTTPS packets to pass.

Under such configuration, the gateway will allow only HTTP and HTTPS packets, issued from the IP range 192.168.123.200 to 250, which are targeted to TCP port 80 or 443 to pass the WAN interface.

## Packet Filter Setting

Go to **Security > Firewall > Packet Filter** Tab.

The packet filter setting allows user to create and customize packet filter policies to allow or reject specific inbound/outbound packets through the router based on their office setting.

## Enable Packet Filter

Configuration		
Item	Setting	
▶ Packet Filters	<input type="checkbox"/> Enable

5.2.2 URL Blocking

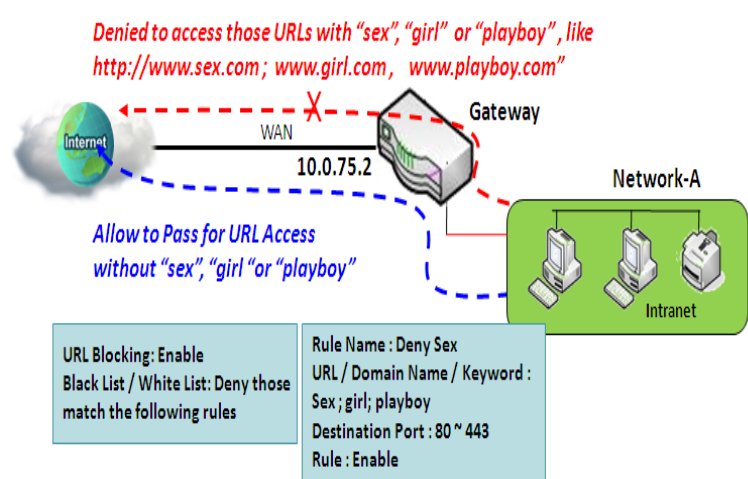

"URL Blocking" function can let you define blocking or allowing rules for incoming and outgoing Web request packets. With defined rules, gateway can control the Web requests containing the complete URL, partial domain name, or pre-defined keywords. For example, one can filter out or allow only the Web requests based on domain input suffixes like .com or .org or keywords like "bct" or "mpe".

An URL blocking rule should specify the URL, partial domain name, or included keywords in the Web requests from and to the gateway and also the destination service port. Besides, a certain time schedule can be applied to activate the URL Blocking rules during pre-defined time interval(s).

The gateway will logs and displays the disallowed web accessing requests that matched the defined URL blocking rule in the black-list or in the exclusion of the white-list.

When you choose "Allow all to pass except those match the following rules" for the "URL Blocking Rule List", you are setting the defined URL blocking rules to belong to the black list. The packets, listed in the rule list, will be blocked if one pattern in the requests matches to one rule. Other Web requests can pass through the gateway. In contrast, when you choose "Deny all to pass except those match the following rules" for the "URL Blocking Rule List", you are setting the defined packet filtering rules to belong to the white list. The Web requests, listed in the rule, will be allowed if one pattern in the requests matches to one rule. Other Web requests will be blocked.

URL Blocking Rule with Black List

When the administrator of the gateway wants to block the Web requests with some dedicated patterns, he can use the "URL Blocking" function to block specific Web requests by defining the black list as shown in above diagram. Certainly, when the administrator wants to allow only the Web requests with some dedicated patterns to go through the gateway, he can also use the "URL Blocking" function by defining the white list to meet the requirement.

As shown in the diagram, enable the URL blocking function and create the first rule to

deny the Web requests with "sex" or "sexygirl" patterns and the other to deny the Web requests with "playboy" pattern to go through the gateway. System will block the Web requests with "sex", "sexygirl" or "playboy" patterns to pass through the gateway.

# 4G PoE IIoT Gateway

## URL Blocking Setting

Go to **Security > Firewall > URL Blocking** Tab.

In "URL Blocking" page, there are three configuration windows. They are the "Configuration" window, "URL Blocking Rule List" window, and "URL Blocking Rule Configuration" window.

The "Configuration" window can let you activate the URL blocking function and specify to black listing or to white listing the packets defined in the "URL Blocking Rule List" entry. In addition, log alerting can be enabled to record on-going events for any disallowed Web request packets. Refer to "System Status" in "6.1.1 System Related" section in this user manual for how to view recorded log.

The "URL Blocking Rule List" window lists all your defined URL blocking rule entry. And finally, the "URL Blocking Rule Configuration" window can let you define URL blocking rules. The parameters in a rule include the rule name, the Source IP or MAC, the URL/Domain Name/Keyword, the destination service ports, the integrated time schedule rule and the rule activation.

### Enable URL Blocking

Configuration	
Item	Setting
▶ URL Blocking	<input checked="" type="checkbox"/> Enable
▶ Black List / White List	Deny those match the following rules. ▼
▶ Log Alert	<input type="checkbox"/> Enable

Configuration Item	Value setting	Description
URL Blocking	The box is unchecked by default	Check the <b>Enable</b> box to activate URL Blocking function.
Black List / White List	<b>Deny those match the following rules</b> is set by default	Specify the URL Blocking Policy, either Black List or White List. Black List: When <b>Deny those match the following rules</b> is selected, as the name suggest, the matched Web request packets will be blocked. White List: When <b>Allow those match the following rules</b> is selected, the matched Web request packets can pass through the Gateway, and the others that don't match the rules will be blocked.
Log Alert	The box is unchecked by default	Check the <b>Enable</b> box to activate Event Log.
Save	NA	Click <b>Save</b> button to save the settings
Undo	NA	Click <b>Undo</b> button to cancel the settings

### Create/Edit URL Blocking Rules

The Gateway supports up to a maximum of 20 URL blocking rule sets. Ensure that the URL Blocking is enabled before we can create blocking rules.

# 4G PoE IIoT Gateway

URL Blocking Rule List									Add	Delete	<div>⬆️⬇️⬆</div>	
------------------------	--	--	--	--	--	--	--	--	-----	--------	--	--

When **Add** button is applied, the **URL Blocking Rule Configuration** screen will appear.

URL Blocking Rule Configuration

Item	Setting
Rule Name	Rule1
Source IP	Any
Source MAC	Any
URL / Domain Name / Keyword	
Destination Port	Any
Time Schedule Rule	(0) Always
Rule	<input type="checkbox"/> Enable

URL Blocking Rules Configuration		
Item	Value setting	Description
<b>Rule Name</b>	1. String format can be any text 2. A Must filled setting	Specify an URL Blocking rule name. Enter a name that is easy for you to understand.
<b>Source IP</b>	1. A Must filled setting 2. <b>Any</b> is set by default	This field is to specify the <b>Source IP address</b> . <ul style="list-style-type: none"> <li>Select <b>Any</b> to filter packets coming from any IP addresses.</li> <li>Select <b>Specific IP Address</b> to filter packets coming from an IP address entered in this field.</li> <li>Select <b>IP Range</b> to filter packets coming from a specified range of IP address entered in this field.</li> <li>Select <b>IP Address-based Group</b> to filter packets coming from a pre-defined group selected. Note: group must be pre-defined before this option become available. Refer to <b>Object Definition &gt; Grouping &gt; Host grouping</b>.</li> </ul>
<b>Source MAC</b>	1. A Must filled setting 2. <b>Any</b> is set by default	This field is to specify the <b>Source MAC address</b> . <ul style="list-style-type: none"> <li>Select <b>Any</b> to filter packets coming from any MAC addresses.</li> <li>Select <b>Specific MAC Address</b> to filter packets coming from a MAC address entered in this field.</li> <li>Select <b>MAC Address-based Group</b> to filter packets coming from a pre-defined group selected. Note: group must be pre-defined before this selection become available. Refer to <b>Object Definition &gt; Grouping &gt; Host grouping</b>.</li> </ul>
<b>URL / Domain Name / Keyword</b>	1. A Must filled setting 2. Supports up to a maximum of 10 Keywords in a rule by using the delimiter “;”.	Specify URL, Domain Name, or Keyword list for URL checking. <ul style="list-style-type: none"> <li>In the <b>Black List</b> mode, if a matched rule is found, the packets will be dropped.</li> <li>In the <b>White List</b> mode, if a matched rule is found, the packets will be accepted and the others which don’t match any rule will be dropped.</li> </ul>
<b>Destination Port</b>	1. A Must filled setting 2. <b>Any</b> is set by default	This field is to specify the <b>Destination Port number</b> . <ul style="list-style-type: none"> <li>Select <b>Any</b> to filter packets going to any Port.</li> <li>Select <b>Specific Service Port</b> to filter packets going to a specific Port entered in this field.</li> <li>Select <b>Port Range</b> to filter packets going to a specific range of Ports entered in this field.</li> </ul>
<b>Time Schedule Rule</b>	A Must filled setting	Apply a specific <b>Time Schedule</b> to this rule; otherwise leave it as <b>(0) Always</b> . If the dropdown list is empty ensure <b>Time Schedule</b> is pre-configured. Refer to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.

# 4G PoE IIoT Gateway

---

Rule	The box is unchecked by default.	Click the <b>Enable</b> box to activate this rule.
Save	NA	Click the <b>Save</b> button to save the settings.
Undo	NA	Click the <b>X</b> button to cancel the changes and back to last page.

5.2.3 MAC Control

Configuration

Item	Setting
MAC Control	<input checked="" type="checkbox"/> Enable
Black List / White List	Deny MAC Address Below. ▾
Log Alert	<input type="checkbox"/> Enable
Known MAC from LAN PC List	<div><div>▾</div><div>Copy to</div></div>

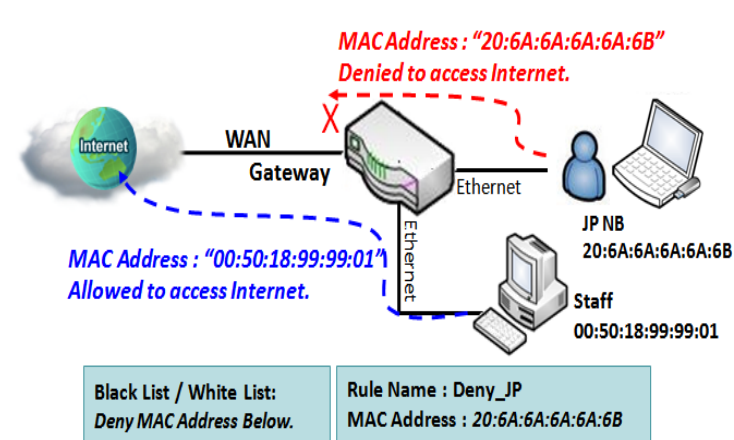

MAC Control Rule List

AddDelete

ID	Rule Name	MAC Address	Time Schedule Rule	Enable	Actions
----	-----------	-------------	--------------------	--------	---------

"MAC Control" function allows you to assign the accessibility to the gateway for different users based on device’s MAC address. When the administrator wants to reject the traffics from some client hosts with specific MAC addresses, he can use the "MAC Control" function to reject with the black list configuration.

MAC Control with Black List Scenario

As shown in the diagram, enable the MAC control function and specify the "MAC Control Rule List" is a black list, and configure one MAC control rule for the gateway to deny the connection request from the "JP NB" with its own MAC address 20:6A:6A:6A:6B. System will block the connecting from the "JP NB" to the gateway but allow others.

# 4G PoE IIoT Gateway

## MAC Control Setting

Go to **Security > Firewall > MAC Control** Tab.

The MAC control setting allows user to create and customize MAC address policies to allow or reject packets with specific source MAC address.

### Enable MAC Control

Configuration

Item	Setting
MAC Control	<input type="checkbox"/> Enable
Black List / White List	Deny MAC Address Below. ▾
Log Alert	<input type="checkbox"/> Enable
Known MAC from LAN PC List	<div><div>▾</div><div>Copy to</div></div>

Configuration Window		
Item	Value setting	Description
MAC Control	The box is unchecked by default	Check the <b>Enable</b> box to activate the MAC filter function
Black List / White List	Deny MAC Address Below is set by default	When <b>Deny MAC Address Below</b> is selected, as the name suggest, packets specified in the rules will be blocked –black listed. In contrast, with <b>Allow MAC Address Below</b> , you can specifically white list the packets to pass and the rest will be blocked.
Log Alert	The box is unchecked by default	Check the <b>Enable</b> box to activate to activate Event Log.
Known MAC from LAN PC List	N/A	Select a MAC Address from LAN Client List. Click the <b>Copy to</b> to copy the selected <b>MAC Address</b> to the filter rule.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

# 4G PoE IIoT Gateway

## Create/Edit MAC Control Rules

The gateway supports up to a maximum of 20 filter rule sets. Ensure that the MAC Control is enabled before we can create control rules.

MAC Control Rule List <span>Add</span> <span>Delete</span> <span>⬆</span> <span>✕</span>					
ID	Rule Name	MAC Address	Time Schedule Rule	Enable	Actions

When **Add** button is applied, **Filter Rule Configuration** screen will appear.

MAC Control Rule Configuration <span>✕</span>			
Rule Name	MAC Address (Use : to Compose)	Time Schedule	Enable
<input type="text" value="Rule1"/>	<input type="text"/>	(0) Always ▾	<input type="checkbox"/>
<span>Save</span>			

MAC Control Rule Configuration		
Item	Value setting	Description
Rule Name	1. String format can be any text 2. A Must fill setting	Enter a MAC Control rule name. Enter a name that is easy for you to remember.
MAC Address (Use: to Compose)	1. MAC Address string Format 2. A Must fill setting	Specify the <b>Source MAC Address</b> to filter rule.
Time Schedule	A Must fill setting	Apply <b>Time Schedule</b> to this rule; otherwise leave it as <b>(0) Always</b> . If the dropdown list is empty, ensure <b>Time Schedule</b> is pre-configured. Refer to <b>Object Definition &gt; Scheduling &gt; Configuration tab</b>
Enable	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule, and then save the settings.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

5.2.6 IPS

Configuration

Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

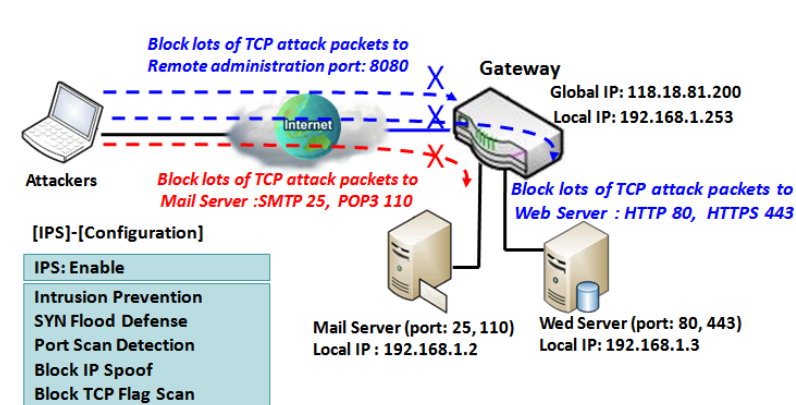

Intrusion Prevention

Item	Setting
▶ SYN Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ Port Scan Defense	<input type="checkbox"/> Enable <input type="text" value="200"/> Packets/second (10~10000)

To provide application servers in the Internet, administrator may need to open specific ports for the services. However, there are some risks to always open service ports in the Internet. In order to avoid such attack risks, it is important to enable IPS functions.

Intrusion Prevention System (IPS) is network security appliances that monitor network and/or system activities for malicious activity. The main functions of IPS are to identify malicious activity, log information about this activity, attempt to block/stop it and report it. You can enable the IPS function and check the listed intrusion activities when needed. You can also enable the log alerting so that system will record Intrusion events when corresponding intrusions are detected.

IPS Scenario

As shown in the diagram, the gateway serves as an E-mail server, Web Server and also provides TCP port 8080 for remote administration. So, remote users or unknown users can request those services from Internet. With IPS enabled, the gateway can detect incoming attack packets, including the TCP ports (25, 80, 110, 443 and 8080) with services. It will block the attack packets and let the normal access to pass through the gateway

# 4G PoE IIoT Gateway

## IPS Setting

Go to **Security > Firewall > IPS** Tab.

The Intrusion Prevention System (IPS) setting allows user to customize intrusion prevention rules to prevent malicious packets.

### Enable IPS Firewall

Configuration	
Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

Configuration Window		
Item	Value setting	Description
IPS	The box is unchecked by default	Check the <b>Enable</b> box to activate IPS function
Log Alert	The box is unchecked by default	Check the <b>Enable</b> box to activate to activate Event Log.
Save	N/A	Click <b>Save</b> to save the settings
Undo	N/A	Click <b>Undo</b> to cancel the settings

### Setup Intrusion Prevention Rules

The router allows you to select intrusion prevention rules you may want to enable. Ensure that the IPS is enabled before we can enable the defense function.

# 4G PoE IIoT Gateway

Intrusion Prevention	
Item	Setting
▶ SYN Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ Port Scan Defense	<input type="checkbox"/> Enable <input type="text" value="200"/> Packets/second (10~10000)
▶ Block Land Attack	<input type="checkbox"/> Enable
▶ Block Ping of Death	<input type="checkbox"/> Enable

## 5.2.7 Options

Firewall Options

Item	Setting
▶ Stealth Mode	<input type="checkbox"/> Enable
▶ SPI	<input type="checkbox"/> Enable
▶ Discard Ping from WAN	<input type="checkbox"/> Enable

Remote Administrator Host Definition

ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input checked="" type="checkbox"/>	Edit
2	All WAN	HTTPS	Any IP	N/A	443	<input checked="" type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

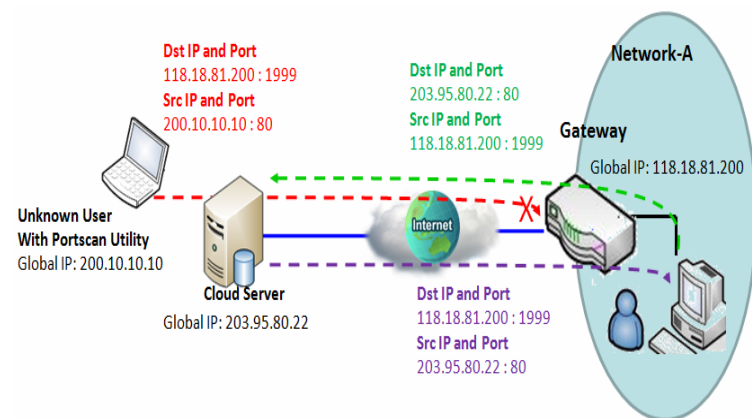

There are some additional useful firewall options in this page.

“Stealth Mode” lets gateway not to respond to port scans from the WAN so that makes it less susceptible to discovery and attacks on the Internet. “SPI” enables gateway to record the packet information like IP address, port address, ACK, SEQ number and so on while they pass through the gateway, and the gateway checks every incoming packet to detect if this packet is valid.

“Discard Ping from WAN” makes any host on the WAN side can’t ping this gateway. And finally, “Remote Administrator Hosts” enables you to perform administration task from a remote host. If this feature is enabled, only specified IP address(es) can perform remote administration.

# 4G PoE IIoT Gateway

## Enable SPI Scenario

As shown in the diagram, Gateway has the IP address of 118.18.81.200 for WAN interface and 192.168.1.253 for LAN interface. It serves as a NAT gateway. Users in Network-A initiate to access cloud server through the gateway. Sometimes, unknown users will simulate the packets but use different source IP to masquerade. With the SPI feature been enabled at the gateway, it will block such packets from unknown users.

## Discard Ping from WAN & Remote Administrator Hosts Scenario

"Discard Ping from WAN" makes any host on the WAN side can't ping this gateway reply any ICMP packets. Enable the Discard Ping from WAN function to prevent security leak when local users surf the internet.

Remote administrator knows the gateway's global IP, and he can access the Gateway GUI via TCP port 8080.

# 4G PoE IIoT Gateway

## Firewall Options Setting

Go to **Security > Firewall > Options** Tab.

The firewall options setting allows network administrator to modify the behavior of the firewall and to enable Remote Router Access Control.

### Enable Firewall Options

Firewall Options		
Item	Setting	
Stealth Mode	<input type="checkbox"/> Enable	
SPI	<input checked="" type="checkbox"/> Enable	
Discard Ping from WAN	<input type="checkbox"/> Enable	

Firewall Options		
Item	Value setting	Description
Stealth Mode	The box is unchecked by default	Check the <b>Enable</b> box to activate the Stealth Mode function
SPI	The box is checked by default	Check the <b>Enable</b> box to activate the SPI function
Discard Ping from WAN	The box is unchecked by default	Check the <b>Enable</b> box to activate the Discard Ping from WAN function

### Define Remote Administrator Host

The router allows network administrator to manage router remotely. The network administrator can assign specific IP address and service port to allow accessing the router.

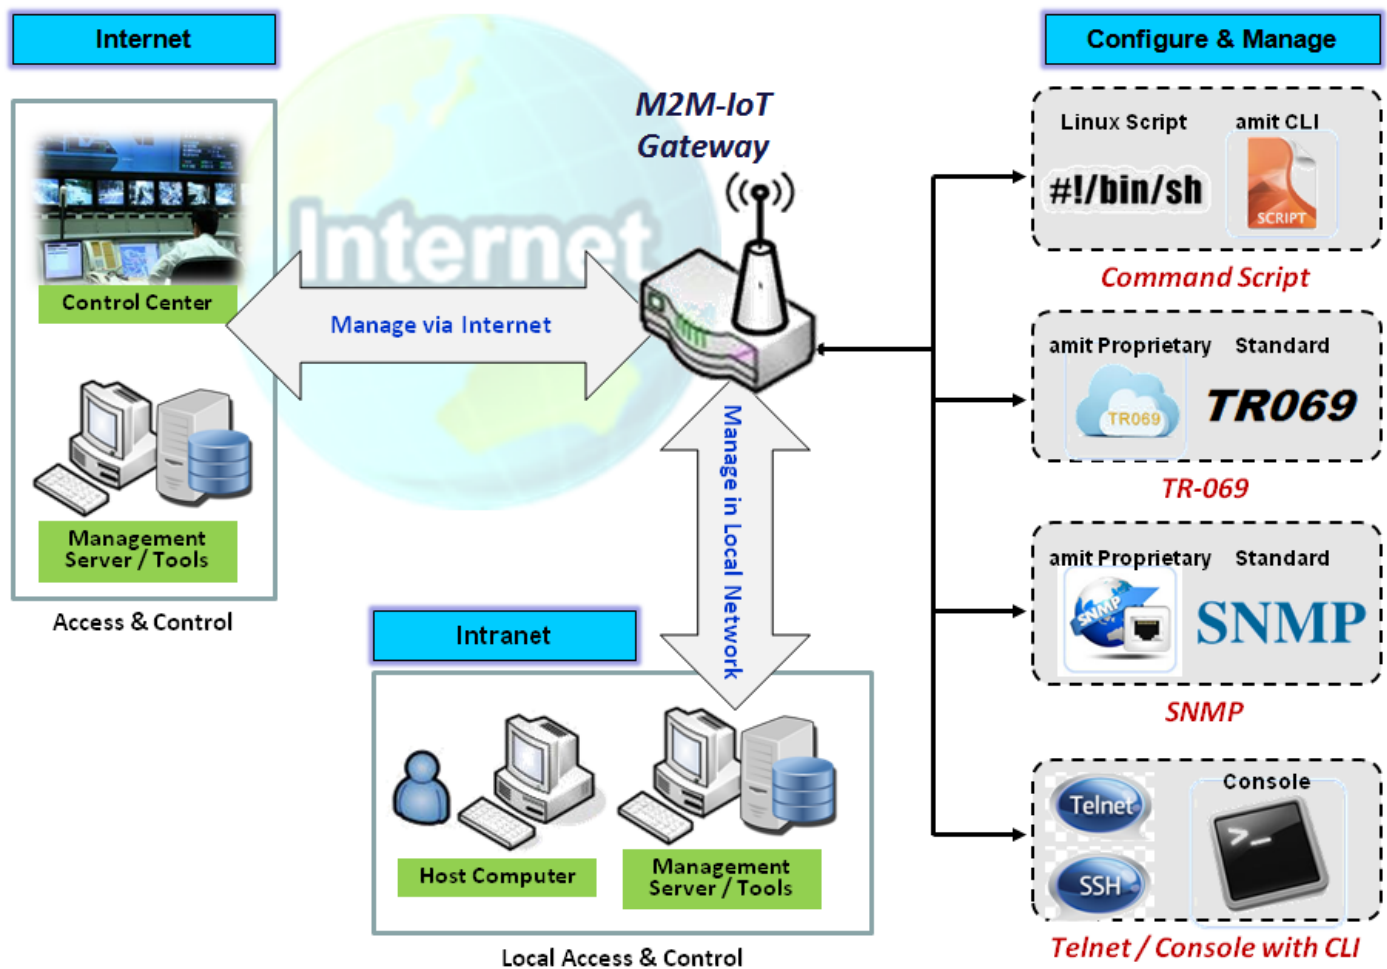

## 4G PoE IIoT Gateway

Remote Administrator Host Definition <span>▲</span> <span>✕</span>							
ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input checked="" type="checkbox"/>	Edit
2	All WAN	HTTPS	Any IP	N/A	443	<input checked="" type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

Remote Administrator Host Definition		
Item	Value setting	Description
<b>Protocol</b>	HTTP is set by default	Select <b>HTTP</b> or <b>HTTPS</b> method for router access.
<b>IP</b>	A Must filled setting	<p>This field is to specify the remote host to assign access right for remote access.</p> <p>Select <b>Any IP</b> to allow any remote hosts</p> <p>Select <b>Specific IP</b> to allow the remote host coming from a specific subnet. An IP address entered in this field and a selected <b>Subnet Mask</b> to compose the subnet.</p>
<b>Service Port</b>	1. 80 for HTTP by default 2. 443 for HTTPS by default	<p>This field is to specify a Service Port to HTTP or HTTPS connection.</p> <p><b>Value Range:</b> 1 ~ 65535.</p>
<b>Enabling the rule</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.

<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## Chapter 6 Administration

### 6.1 Configure & Manage

Configure & Manage refers to enterprise-wide administration of distributed systems including (and commonly in practice) computer systems. Centralized management has a time and effort trade-off that is related to the size of the company, the expertise of the IT staff, and the amount of technology being used. This device supports many system management protocols, such as Command Script, TR-069, SNMP, and Telnet with CLI. You can setup those configurations in the "Configure & Manage" section.

# 4G PoE IIoT Gateway

## 6.1.1 Command Script

Command script configuration is the application that allows administrator to setup the pre-defined configuration in plain text style and apply configuration on startup.

Go to **Administration > Command Script > Configuration Tab**.

### Enable Command Script Configuration

Configuration	
Item	Setting
▶ Command Script	<input type="checkbox"/> Enable
▶ Backup Script	Via Web UI
▶ Upload Script	Via Web UI
▶ Script Name	<input type="text"/>
▶ Version	<input type="text"/>
▶ Description	<div></div>
▶ Update time	2019-04-08T18:05:31

Configuration Item	Value setting	Description
Command Script	The box is unchecked by default	Check the <b>Enable</b> box to activate the Command Script function.
Backup Script	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to backup the existed command script in a .txt file. You can specify the script file name in <b>Script Name</b> below.
Upload Script	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to Upload the existed command script from a specified .txt file.
Script Name	1.An Optional setting 2.Any valid file name	Specify a script file name for script backup, or display the selected upload script file name. <b>Value Range:</b> 0 ~ 32 characters.
Version	1.An Optional setting 2.Any string	Specify the version number for the applied Command script. <b>Value Range:</b> 0 ~ 32 characters.
Description	1.An Optional setting 2.Any string	Enter a short description for the applied Command script.
Update time	N/A	It records the upload time for last commad script upload.

# 4G PoE IIoT Gateway

## Edit/Backup Plain Text Command Script

Command Script Editor

Clean

0 / 65280

You can edit the plain text configuration settings in the configuration screen as above.

Plain Text Configuration		
Item	Value setting	Description
Clean	NA	Clean text area. (You should click <b>Save</b> button to further clean the configuration already saved in the system.)
Backup	NA	Backup and download configuration.
Save	NA	Save configuration

The supported plain text configuration items are shown in the following list. For the settings that can be executed with standard Linux commands, you can put them in a script file, and apply to the system configure with **STARTUP** command. For those configurations without corresponding Linux command set to configure, you can configure them with proprietary command set.

Configuration Content		
Key	Value setting	Description
OPENVPN_ENABLED	1 : enable 0 : disable	Enable or disable OpenVPN Client function.
OPENVPN_DESCRIPTION	A Must filled Setting	Specify the tunnel name for the OpenVPN Client connection.
OPENVPN_PROTO	udp tcp	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"><li>• Select <b>TCP</b> or <b>TCP /UDP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li><li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li></ul>
OPENVPN_PORT	A Must filled Setting	Specify the <b>Port</b> for the OpenVPN Client to use.
OPENVPN_REMOTE_IPADDR	IP or FQDN	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
OPENVPN_PING_INTVL	seconds	Specify the time interval for OpenVPN keep-alive checking.

# 4G PoE IIoT Gateway

OPENVPN_PING_TOUT	seconds	Specify the timeout value for OpenVPN Client keep-alive checking.
OPENVPN_COMP	Adaptive	Specify the <b>LZO Compression</b> algorithm for OpenVPN client.
OPENVPN_AUTH	Static Key/TLS	Specify the authorization mode for the OpenVPN tunnel. <ul style="list-style-type: none"><li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Client Cert.</b> and <b>Client Key</b> need to specify as well.</li></ul>
OPENVPN_CA_CERT	A Must filled Setting	Specify the Trusted CA certificate for the OpenVPN client. It will go through Base64 Conversion.
OPENVPN_LOCAL_CERT	A Must filled Setting	Specify the local certificate for OpenVPN client. It will go through Base64 Conversion.
OPENVPN_LOCAL_KEY	A Must filled Setting	Specify the local key for the OpenVPN client. It will go through Base64 Conversion.
OPENVPN_EXTRA_OPTS	Options	Specify the extra options setting for the OpenVPN client.
IP_ADDR1	Ip	Ethernet LAN IP
IP_NETM1	Net mask	Ethernet LAN MASK
PPP_MONITORING	1 : enable 0 : disable	When the Network Monitoring feature is enabled, the router will use DNS Query or ICMP to periodically check Internet connection – connected or disconnected.
PPP_PING	0 : DNS Query 1 : ICMP Query	With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in PPP_PING_IPADDR. With <b>ICMP Query</b> , the system will check connection by sending ICMP request packets to the destination specified in PPP_PING_IPADDR.
PPP_PING_IPADDR	IP	Specify an IP address as the target for sending DNS query/ICMP request.
PPP_PING_INTVL	seconds	Specify the time interval for between two DNS Query or ICMP checking packets.
STARTUP	Script file	For the configurations that can be configured with standard Linux commands, you can put them in a script file, and apply the script file with STARTUP command. For example, STARTUP=#!/bin/sh STARTUP=echo "startup done" > /tmp/demo

## Plain Text System Configuration with Telnet

In addition to the web-style plain text configuration as mentioned above, the gateway system also allow the configuration via Telnet CLI. Administrator can use the proprietary telnet command “**txtConfig**” and related action items to perform the plain system configuration.

The command format is: txtConfig (action) [option]

Action	Option	Description
clone	Output file	Duplicate the configuration content from database and stored as a configuration file. (ex: <i>txtConfig clone /tmp/config</i> ) The contents in the configuration file are the same as the plain text commands mentioned above. This action is exactly the same as performing the “Backup” plain text configuration.

## 4G PoE IIoT Gateway

---

<b>commit</b>	a existing file	Commit the configuration content to database. (ex: <i>txtConfig commit /tmp/config</i> )
<b>enable</b>	NA	Enable plain text system config. (ex: <i>txtConfig enable</i> )
<b>disable</b>	NA	Disable plain text system config. (ex: <i>txtConfig disable</i> )
<b>run_immediately</b>	NA	Apply the configuration content that has been committed in database. (ex: <i>txtConfig run_immediately</i> )
<b>run_immediately</b>	a existing file	Assign a configuration file to apply. (ex: <i>txtConfig run_immediately /tmp/config</i> )

# 4G PoE IIoT Gateway

## 6.1.2 TR-069

TR-069 (Technical Report 069) is a Broadband Forum technical specification entitled CPE WAN Management Protocol (CWMP). It defines an application layer protocol for remote management of end-user devices, like this gateway device. As a bidirectional SOAP/HTTP-based protocol, it provides the communication between customer-premises equipment (CPE) and Auto Configuration Servers (ACS). The Security Gateway is such CPE.

TR-069 is a customized feature for ISP. It is not recommend that you change the configuration for this. If you have any problem in using this feature for device management, please contact with your ISP or the ACS provider for help. At the right upper corner of TR-069 Setting screen, one “[Help]” command let you see the same message about that.

Scenario - Managing deployed gateways through an ACS Server

### Scenario Application Timing

When the enterprise data center wants to use an ACS server to manage remote gateways geographically distributed elsewhere in the world, the gateways in all branch offices must have an embedded TR-069 agent to communicate with the ACS server. So that the ACS server can configure, FW upgrade and monitor these gateways and their corresponding Intranets.

### Scenario Description

The ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

The ACS server can ask the gateways to execute some urgent jobs.

## 4G PoE IIoT Gateway

### Parameter Setup Example

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "TR-069" enabling.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[TR-069]-[Configuration]
TR-069	■ <i>Enable</i>
ACS URL	<a href="http://qa.acslite.com/cpe.php">http://qa.acslite.com/cpe.php</a>
ACS User Name	<i>ACSUserName</i>
ACS Password	<i>ACSPassword</i>
ConnectionRequest Port	<i>8099</i>
ConnectionRequest User Name	<i>ConnReqUserName</i>
ConnectionRequest Password	<i>ConnReqPassword</i>
Inform	■ <i>Enable</i> <i>Interval 900</i>

### Scenario Operation Procedure

In above diagram, the ACS server can manage multiple gateways in the Internet. The "Gateway 1" is one of them and has 118.18.81.33 IP address for its WAN-1 interface.

When all remote gateways have booted up, they will try to connect to the ACS server.

Once the connections are established successfully, the ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

If the ACS server needs some urgent jobs to be done by the gateways, it will issue the "Connection Request" command to those gateways. And those gateways make immediate connections in response to the ACS server's immediate connection request for executing the urgent jobs.

# 4G PoE IIoT Gateway

## TR-069 Setting

Go to **Administration > Configure & Manage > TR-069** tab.

In "TR-069" page, there is only one configuration window for TR-069 function. In the window, you must specify the related information for your security gateway to connect to the ACS. Drive the function to work by specifying the URL of the ACS server, the account information to login the ACS server, the service port and the account information for connection requesting from the ACS server, and the time interval for job inquiry. Except the inquiry time, there are no activities between the ACS server and the gateways until the next inquiry cycle. But if the ACS server has new jobs that are expected to do by the gateways urgently, it will ask these gateways by using connection request related information for immediate connection for inquiring jobs and executing.

### Enable TR-069

Configuration

Item	Setting
▶ TR-069	<input type="checkbox"/> Enable

# 4G PoE IIoT Gateway

## 6.1.3 SNMP

In brief, SNMP, the Simple Network Management Protocol, is a protocol designed to give a user the capability to remotely manage a computer network by polling and setting terminal values and monitoring network events.

In typical SNMP uses, one or more administrative computers, called managers, have the task of monitoring or managing a group of hosts or devices on a computer network. Each managed system executes, at all times, a software component called an agent which reports information via SNMP to the manager.

SNMP agents expose management data on the managed systems as variables. The protocol also permits active management tasks, such as modifying and applying a new configuration through remote modification of these variables. The variables accessible via SNMP are organized in hierarchies. These hierarchies, and other metadata (such as type and description of the variable), are described by Management Information Bases (MIBs).

The device supports several public MIBs and one private MIB for the SNMP agent. The supported MIBs are as follow: MIB-II (RFC 1213, Include IPv6), IF-MIB, IP-MIB, TCP-MIB, UDP-MIB, SMIv1 and SMIv2, SNMPv2-TM and SNMPv2-MIB, and AMIB (a Proprietary MIB)

### SNMP Management Scenario

### Scenario Application Timing

There are two application scenarios of SNMP Network Management Systems (NMS). Local NMS is in

## 4G PoE IIoT Gateway

the Intranet and manage all devices that support SNMP protocol in the Intranet. Another one is the Remote NMS to manage some devices whose WAN interfaces are connected together by using a switch or a router with UDP forwarding. If you want to manage some devices and they all have supported SNMP protocol, use either one application scenario, especially the management of devices in the Intranet. In managing devices in the Internet, the TR-069 is the better solution. Please refer to last sub-section.

### Scenario Description

The NMS server can monitor and configure the managed devices by using SNMP protocol, and those devices are located at where UDP packets can reach from NMS.

The managed devices report urgent trap events to the NMS servers.

Use SNMPv3 version of protocol can protected the transmitting of SNMP commands and responses.

The remote NMS with privilege IP address can manage the devices, but other remote NMS can't.

### Parameter Setup Example

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "SNMP" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[SNMP]-[Configuration]
SNMP Enable	■ LAN ■ WAN
Supported Versions	■ v1 ■ v2c ■ v3
Get / Set Community	ReadCommunity / WriteCommunity
Trap Event Receiver 1	118.18.81.11
WAN Access IP Address	118.18.81.11

Configuration Path	[SNMP]-[User Privacy Definition]		
ID	1	2	3
User Name	UserName1	UserName2	UserName3
Password	Password1	Password2	Disable
Authentication	MD5	SHA-1	Disable
Encryption	DES	Disable	Disable
Privacy Mode	authPriv	authNoPriv	noAuthNoPriv
Privacy Key	12345678	Disable	Disable
Authority	Read/Write	Read	Read
Enable	■ Enable	■ Enable	■ Enable

### Scenario Operation Procedure

In above diagram, the NMS server can manage multiple devices in the Intranet or a UDP-reachable network. The "Gateway 1" is one of the managed devices, and it has the IP address of 10.0.75.2 for

## 4G PoE IIoT Gateway

---

LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT router.

At first stage, the NMS manager prepares related information for all managed devices and records them in the NMS system. Then NMS system gets the status of all managed devices by using SNMP get commands.

When the manager wants to configure the managed devices, the NMS system allows him to do that by using SNMP set commands. The "UserName1" account is used if the manager uses SNMPv3 protocol for configuring the "Gateway 1". Only the "UserName1" account can let the "Gateway 1" accept the configuration from the NMS since the authority of the account is "Read/Write".

Once a managed device has an urgent event to send, the device will issue a trap to the Trap Event Receivers. The NMS itself could be one among them.

If you want to secure the transmitted SNMP commands and responses between the NMS and the managed devices, use SNMPv3 version of protocol.

The remote NMS without privilege IP address can't manage the "Gateway 1", since "Gateway 1" allows only the NMS with privilege IP address can manage it via its WAN interface.

# 4G PoE IIoT Gateway

## SNMP Setting

Go to **Administration > Configure & Manage > SNMP** tab.

The SNMP allows user to configure SNMP relevant setting which includes interface, version, access control and trap receiver.

### Enable SNMP

Configuration

Item	Setting																				
▶ SNMP Enable	<input checked="" type="checkbox"/> LAN <input type="checkbox"/> WAN

User Privacy Rule Configuration		
Item	Value setting	Description
<b>User Name</b>	1. A Must filled setting 2. String format: any text	Specify the <b>User Name</b> for this version 3 user. <b>Value Range:</b> 1 ~ 32 characters.
<b>Password</b>	1. String format: any text	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Password</b> for this version 3 user. <b>Value Range:</b> 8 ~ 64 characters.
<b>Authentication</b>	1. <b>None</b> is selected by default	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Authentication</b> types for this version 3 user. Selected the authentication types <b>MD5/ SHA-1</b> to use.
<b>Encryption</b>	1. <b>None</b> is selected by default	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Encryption</b> protocols for this version 3 user.

## 4G PoE IIoT Gateway

		Selected the encryption protocols <b>DES / AES</b> to use.
<b>Privacy Mode</b>	1. <b>noAuthNoPriv</b> is selected by default	Specify the <b>Privacy Mode</b> for this version 3 user. Selected the <b>noAuthNoPriv</b> . You do not use any authentication types and encryption protocols. Selected the <b>authNoPriv</b> . You must specify the <b>Authentication</b> and <b>Password</b> . Selected the <b>authPriv</b> . You must specify the Authentication, Password, Encryption and Privacy Key.
<b>Privacy Key</b>	1. String format: any text	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Privacy Key</b> (8 ~ 64 characters) for this version 3 user.
<b>Authority</b>	1. <b>Read</b> is selected by default	Specify this version 3 user's <b>Authority</b> that will be allowed <b>Read Only</b> (GET and GETNEXT) or <b>Read-Write</b> (GET, GETNEXT and SET) access respectively.
<b>OID Filter Prefix</b>	1. The default value is 1 2. A Must filled setting 3. String format: any legal OID	The <b>OID Filter Prefix</b> restricts access for this version 3 user to the sub-tree rooted at the given OID. <b><u>Value Range: 1 ~2080768.</u></b>
<b>Enable</b>	1.The box is checked by default	Click <b>Enable</b> to enable this version 3 user.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration. But it does not apply to SNMP functions. When you return to the SNMP main page. It will show "Click on save button to apply your changes" remind user to click main page <b>Save</b> button.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings
<b>Back</b>	N/A	Click the <b>X</b> button to return the last page.

## Create/Edit Trap Event Receiver

The SNMP allows you to custom your trap event receiver. The router supports up to a maximum of 4 Trap Event Receiver sets.

Trap Event Receiver List												Add	Delete		
ID	Server IP	Server Port	SNMP Version	Community Name	User Name	Password	Privacy Mode	Authentication	Encryption	Privacy Key	Enable	Actions			

When **Add** button is applied, **Trap Event Receiver Rule Configuration** screen will appear. The default SNMP Version is v1. The configuration screen will provide the version 1 must filled items.

# 4G PoE IIoT Gateway

Trap Event Receiver Rule Configuration

Item	Setting
▶ Server IP	<input type="text"/> (IP Address/FQDN)
▶ Server Port	<input type="text" value="162"/>
▶ SNMP Version	<div>v1 ▾</div>
▶ Community Name	<input type="text"/>
▶ Enable	<input checked="" type="checkbox"/> Enable

When you selected v2c, the configuration screen is exactly the same as that of v1, except the version.

When you selected v3, the configuration screen will provide more setting items for the version 3 Trap.

## Specify SNMP MIB-2 System

If required, you can also specify the required information the the MIB-2 System.

SNMP MIB-2 System	
Item	Setting
▶ sysContact	<input type="text"/>
▶ sysLocation	<input type="text"/>

SNMP MIB-2 System Configuration		
Item	Value setting	Description
sysContact	1. An Optional filled setting 2. String format: any text	Specify the contact information forMIB-2 system. <b><u>Value Range:</u></b> 0 ~ 64 characters.
sysLocation	1. An Optional filled setting 2. String format: any text	Specify the location information forMIB-2 system. <b><u>Value Range:</u></b> 0 ~ 64 characters.

## Edit SNMP Options

If you use some particular private MIB, you must fill the enterprise name, number and OID.

Options	
Item	Setting
▶ Enterprise Name	<input type="text" value="Default"/>
▶ Enterprise Number	<input type="text" value="12823"/>
▶ Enterprise OID	1.3.6.1.4.1. <input type="text" value="12823.4.4.9"/>

Options		
Item	Value setting	Description
Enterprise Name	1. The default value is <b>Default</b> 2. A Must filled setting 3. String format: any text	Specify the <b>Enterprise Name</b> for the particular private MIB. <b><u>Value Range:</u></b> 1 ~ 10 characters, and only string with A~Z, a~z, 0~9, '-', '_'.
Enterprise Number	The default value is <b>12823</b> (Default Enterprise	Specify the <b>Enterprise Number</b> for the particular private MIB. <b><u>Value Range:</u></b> 1 ~2080768.

## 4G PoE IIoT Gateway

	Number) 2. A Must filled setting 3. String format: any number	
<b>Enterprise OID</b>	1. The default value is 1.3.6.1.4.1.12823.4.4.9 (Default Enterprise OID) 2. A Must filled setting 3. String format: any legal OID	Specify the <b>Enterprise OID</b> for the particular private MIB. The range of the each OID number is 1-2080768. The maximum length of the enterprise OID is 31. The seventh number must be identical with the enterprise number.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration and apply your changes to SNMP functions.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.

# 4G PoE IIoT Gateway

## 6.1.4 Telnet & SSH

A command-line interface (CLI), also known as command-line user interface, and console user interface are means of interacting with a computer program where the user (or client) issues commands to the program in the form of successive lines of text (command lines). The interface is usually implemented with a command line shell, which is a program that accepts commands as text input and converts commands to appropriate operating system functions. Programs with command-line interfaces are generally easier to automate via scripting. The device supports both Telnet and SSH (Secure Shell) CLI with default service port 23 and 22, respectively.

### Telnet & SSH Scenario

#### Scenario Application Timing

When the administrator of the gateway wants to manage it from remote site in the Intranet or Internet, he may use "Telnet with CLI" function to do that by using "Telnet" or "SSH" utility.

#### Scenario Description

The Local Admin or the Remote Admin can manage the Gateway by using "Telnet" or "SSH" utility with privileged user name and password.

The data packets between the Local Admin and the Gateway or between the Remote Admin and the Gateway can be plain texts or encrypted texts. Suggest they are plain texts in the Intranet for Local Admin to use "Telnet" utility, and encrypted texts in the Internet for Remote Admin to use "SSH" utility.

## 4G PoE IIoT Gateway

---

### Parameter Setup Example

Following table lists the parameter configuration as an example for the Gateway in above diagram with "Telnet with CLI" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the table.

Configuration Path	[Telnet & SSH]-[Configuration]
Telnet	LAN: <input checked="" type="checkbox"/> <b>Enable</b> WAN: <input type="checkbox"/> <b>Enable</b> Service Port: <b>23</b>
SSH	LAN: <input checked="" type="checkbox"/> <b>Enable</b> WAN: <input checked="" type="checkbox"/> <b>Enable</b> Service Port: <b>22</b>

### Scenario Operation Procedure

In above diagram, "Local Admin" or "Remote Admin" can manage the "Gateway" in the Intranet or Internet. The "Gateway" is the gateway of Network-A, and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT gateway.

The "Local Admin" in the Intranet uses "Telnet" utility with privileged account to login the Gateway.

Or the "Remote Admin" in the Internet uses "SSH" utility with privileged account to login the Gateway.

The administrator of the gateway can control the device as like he is in front of the gateway.

# 4G PoE IIoT Gateway

## Telnet & SSH Setting

Go to **Administration > Configure & Manage > Telnet & SSH** tab.

The Telnet & SSH setting allows administrator to access this device through the traditional Telnet or SSH Telnet program. Before you can telnet (login) to the device, please configure the related settings and password with care. The password management part allows you to set root password for logging telnet and SSH.

## 6.2 System Operation

System Operation allows the network administrator to manage system, settings such as web-based utility access password change, system information, system time, system log, firmware/configuration backup & restore, and reset & reboot.

### 6.2.1 Password & MMI

Go to **Administration > System Operation > Password & MMI** tab.

#### Setup Host Name

Host Name screen allows network administrator to setup / change the host name of the gateway. Click the **Modify** button and provide the new username setting.

Host Name	
Item	Setting
▶ Host Name	<input type="text"/>

Username Configuration		
Item	Value setting	Description
Host Name	1. An Optional setting 2. It is blanked by default	Enter the host name of the gateway.
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

#### Change UserName

Username screen allows network administrator to change the web-based MMI login account to access gateway. Click the **Modify** button and provide the new username setting.

Username	
Item	Setting
▶ Username	admin <input type="button" value="Modify"/>
▶ New Username	<input type="text"/>
▶ Password	<input type="text"/>

# 4G PoE IIoT Gateway

Username Configuration		
Item	Value setting	Description
Username	1. The default Username for web-based MMI is 'admin'.	Display the current MMI login account (Username).
New Username	String: any text	Enter new Username to replace the current setting.
Password	String: any text	Enter current password to verify if you have the permission to change the username setting.
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

## Change Password

Change password screen allows network administrator to change the web-based MMI login password to access gateway.

Password

Item

Setting

▶ Old Password

▶ New Password

▶ New Password Confirmation

Password Configuration		
Item	Value setting	Description
Old Password	1. String: any text 2. The default password for web-based MMI is 'admin'.	Enter the current password to enable you unlock to change password.
New Password	String: any text	Enter new password
New Password Confirmation	String: any text	Enter new password again to confirm
Save	N/A	Click <b>Save</b> button to save the settings
Undo	N/A	Click <b>Undo</b> button to cancel the settings

## Change MMI Setting for Accessing

This is the gateway's web-based MMI access which allows administrator to access the gateway for management. The gateway's web-based MMI will automatically logout when the idle time has elapsed. The

## 4G PoE IIoT Gateway

setting allows administrator to enable automatic logout and set the logout idle time. When the login timeout is disabled, the system won't logout the administrator automatically.

 MMI

Item	Setting
▶ Login	Password-Guessing Attack & MAX: <input type="text" value="3"/> (times)
▶ Login Timeout	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> (seconds)
▶ GUI Access Protocol	<input type="text" value="http/https"/>
▶ HTTPs Certificate Setup	<div><input checked="" type="radio"/> default <input type="radio"/> Select from Certificate List</div> <div>Certificate: <input type="text" value="TrustedCert0"/> Key: <input type="text" value="TrustedKey0"/></div>
▶ HTTP Compression	<input checked="" type="checkbox"/> gzip <input type="checkbox"/> deflate
▶ HTTP Binding	<input checked="" type="checkbox"/> DHCP 1
▶ System Boot Mode	<input type="text" value="Normal Mode"/>

MMI Configuration		
Item	Value setting	Description
Login	3 times is set by default	Enter the login trial counting value. <b><u>Value Range:</u></b> 3 ~ 10. If someone tried to login the web GUI with incorrect password for more than the counting value, an warning message “ <b><i>Already reaching maximum Password-Guessing times, please wait a few seconds!</i></b> ” will be displayed and ignore the following login trials.
Login Timeout	The Enable box is checked, and 300 is set by default.	Check the Enable box to activate the auto logout function, and specify the maximum idle time as well. <b><u>Value Range:</u></b> 30 ~ 65535.
GUI Access Protocol	<b>http/https</b> is selected by default.	Select the protocol that will be used for GUI access. It can be <b>http/https</b> , <b>http only</b> , or <b>https only</b> .
HTTPs Certificate Setup	The <b>default</b> box is selected by default	If the https Access Protocol is selected, the HTTPs Certificate Setup option will be available for further configuration. You can leave it as default or select a expected certificate and key from the drop down list. Refer to <b>Object Definition &gt; Certificate</b> Section for the Certificate configuration.
HTTP Compression	The box is unchecked by default.	Check the box ( <b>gzip</b> , or <b>deflate</b> ) if any comprerssion method is preferred.
HTTP Binding	1. An Optional setting 2. DHCP-1 is checked by default	Select the DHCP Server to bind with http access.
System Boot Mode	<b>Normal Mode</b> is selected by default.	Select the system boot mode that will be adopted to boot up the device. <b>Normal Mode:</b> It takes longer boot up time, with complete firmware image

## 6.2.2 System Information

System Information screen gives network administrator a quick look up on the device information for the purchased gateway.

Go to **Administration > System Operation > System Information** tab.

System Information	
Item	Setting
▶ Model Name	
▶ Device Serial Number	
▶ Kernel Version	2.6.36
▶ FW Version	0000Y90.J31_e32.BETA_04021700
▶ System Time	Thu, 18 Apr 2019 16:18:16 +0800
▶ Device Up-Time	15day 22hr 30min 35sec

System Information		
Item	Value Setting	Description
<b>Model Name</b>	N/A	It displays the model name of this product.
<b>Device Serial Number</b>	N/A	It displays the serial number of this product.
<b>Kernel Version</b>	N/A	It displays the Linux kernel version of the product
<b>FW Version</b>	N/A	It displays the firmware version of the product
<b>Memory Usage</b>	N/A	It displays the percentage of device memory utilization.
<b>System Time</b>	N/A	It displays the current system time that you browsed this web page.
<b>Device Up-Time</b>	N/A	It displays the statistics for the device up-time since last boot up.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system Information immediately.

# 4G PoE IIoT Gateway

## 6.2.3 System Time

The gateway provides manually setup and auto-synchronized approaches for the administrator to setup the system time for the gateway. The time supported synchronization methods can be Time Server, Manual, PC, Cellular Module, or GPS Signal. Select the method first, and then configure rest settings.

Instead of manually configuring the system time for the gateway, there are two simple and quick solutions for you to set the correct time information and set it as the system time for the gateway.

The first one is “Sync with Timer Server”. Based on your selection of time zone and time server in above time information configuration window, system will communicate with time server by NTP Protocol to get system date and time after you click on the **Synchronize immediately** button.

The second one is “Sync with my PC”. Select the method and the system will synchronize its date and time to the time of the administration PC.

Go to **Administration > System Operation > System Time** tab.

### Synchronize with Time Server

System Time Configuration

Item	Setting
Synchronization method	Time Server
Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London
Auto-synchronization	Time Server: <input type="text"/> Available Time Servers (RFC-868): Auto
Daylight Saving Time	<input type="checkbox"/> Enable
NTP Service	<input type="checkbox"/> Enable
Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
Synchronization method	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select the <b>Time Server</b> as the synchronization method for the system time.
Time Zone	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
Auto-synchronization	1. A Must-filled item. 2. Auto is selected by	Enter the IP or FQDN for the NTP time server you expected, or leave it as auto mode so that the available server will be used for time synchronization one by

# 4G PoE IIoT Gateway

	default.	one.
<b>Daylight Saving Time</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the daylight saving function. When you enabled this function, you have to specify the start date and end date for the daylight saving time duration.
<b>NTP Service</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
<b>Synchronize immediately</b>	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system time immediately.

Note: Remember to select a correct time zone for the device, otherwise, you will just get the UTC (Coordinated Universal Time) time, not the local time for the device.

## Synchronize with Manually Setting

 **System Time Configuration**  

Item	Setting
▶ Synchronization method	<input type="text" value="Manual"/>
▶ Time Zone	<input type="text" value="(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London"/>
▶ Daylight Saving Time	<input type="checkbox"/> Enable
▶ Set Date & Time Manually	<input type="text" value="2019"/> / <input type="text" value="April"/> / <input type="text" value="18"/> (Year/Month/Day) <input type="text" value="16"/> : <input type="text" value="24"/> : <input type="text" value="27"/> (Hour:Minute:Second)
▶ NTP Service	<input type="checkbox"/> Enable

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select the <b>Manual</b> as the synchronization method for the system time. It means administrator has to set the Date & Time manually.
<b>Time Zone</b>	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
<b>Daylight Saving Time</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the daylight saving function. When you enabled this function, you have to specify the start date and end date for the daylight saving time duration.
<b>Set Date &amp; Time Manually</b>	1. It is an optional item.	Manually set the date (Year/Month/Day) and time (Hour:Minute:Second) as the system time.
<b>NTP Service</b>	1. It is an optional item.	Check the <b>Enable</b> button to activate the NTP Service function.

# 4G PoE IIoT Gateway

	2. Un-checked by default	When you enabled this function, the gateway can provide NTP server service for its local connected devices.
Save	N/A	Click the <b>Save</b> button to save the settings.

## Synchronize with PC

System Time Configuration

Item	Setting
Synchronization method	PC
NTP Service	<input type="checkbox"/> Enable
Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
Synchronization method	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select <b>PC</b> as the synchronization method for the system time to let system synchronize its date and time to the time of the administration PC.
NTP Service	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
Synchronize immediately	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
Save	N/A	Click the <b>Save</b> button to save the settings.
Refresh	N/A	Click the <b>Refresh</b> button to update the system time immediately.

# 4G PoE IIoT Gateway

## Synchronize with Cellular Time Service

System Time Configuration

Item	Setting
Synchronization method	Cellular Module ▾
Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▾
NTP Service	<input type="checkbox"/> Enable
Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
Synchronization method	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select <b>Cellular Module</b> as the synchronization method for the system time to let system synchronize its date and time to the time provided from the connected mobile ISP. Note: this option is only available for the product with Cellular WAN interface.
Time Zone	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
NTP Service	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
Synchronize immediately	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
Save	N/A	Click the <b>Save</b> button to save the settings.
Refresh	N/A	Click the <b>Refresh</b> button to update the system time immediately.

## 6.2.5 Backup & Restore

In the Backup & Restore window, you can upgrade the device firmware when new firmware is available and also backup / restore the device configuration.

In addition to the factory default settings, you can also customize a special configuration setting as a customized default value. With this customized default value, you can reset the device to the expected default setting if needed.

Go to **Administration > System Operation > Backup & Restore** tab.

FW Backup & Restore

Item	Setting
▶ FW Upgrade	Via Web UI ▼ <button>FW Upgrade</button>
▶ Backup Configuration Settings	Download ▼ <button>Via Web UI</button>
▶ Auto Restore Configuration	<input type="checkbox"/> Enable <button>Save Conf.</button> <button>Clean Conf.</button> <button>Conf. Info.</button>
▶ Self-defined Logo	Download ▼ <button>Via Web UI</button> <button>Reset</button>
▶ Self-defined CSS	<button>Edit</button> : Download ▼ <button>Via Web UI</button> <button>Reset</button>

FW Backup & Restore		
Item	Value Setting	Description
<b>FW Upgrade</b>	<b>Via Web UI</b> is selected by default	If new firmware is available, click the <b>FW Upgrade</b> button to upgrade the device firmware <b>via Web UI</b> , or <b>Via Storage</b> . After clicking on the “FW Upgrade” command button, you need to specify the file name of new firmware by using “Browse” button, and then click “Upgrade” button to start the FW upgrading process on this device. If you want to upgrade a firmware which is from GPL policy, please check “Accept unofficial firmware”
<b>Backup Configuration Settings</b>	<b>Download</b> is selected by default	You can backup or restore the device configuration settings by clicking the <b>Via Web UI</b> button. <b>Download:</b> for backup the device configuration to a config.bin file. <b>Upload:</b> for restore a designated configuration file to the device. <b>Via Web UI:</b> to retrieve the configuration file via Web GUI.
<b>Auto Restore Configuration</b>	The <b>Enable</b> box is unchecked by default	Click the <b>Enable</b> button to activate the customized default setting function. Once the function is activated, you can save the expected setting as a customized default setting by clicking the <b>Save Conf.</b> button, or clicking the <b>Clean Conf.</b> button to erase the stored customized configuration.

6.2.6 Reboot & Reset

For some special reason or situation, you may need to reboot the gateway or reset the device configuration to its default value. In addition to perform these operations through the Power ON/OFF, or pressing the reset button on the device panel, you can do it through the web GUI too.

Go to **Administration > System Operation > Reboot & Reset** tab.

In the Reboot & Reset window, you can reboot this device by clicking the “Reboot” button, and reset this device to default settings by clicking the “Reset” button.

System Operation

Item	Setting
▶ Reboot	<div>Now ▼</div> <div>Reboot</div>
▶ Reset to Default	<div>Reset</div>

System Operation Window		
Item	Value Setting	Description
Reboot	Now is selected by default	<p>Click the <b>Reboot</b> button to reboot the gateway immediately or on a pre-defined time schedule.</p> <p><b>Now:</b> Reboot immediately</p> <p><b>Time Schedule:</b> Select a pre-defined auto-reboot time schedule rule to reboot the auto device on a designated tim. To define a time schedule rule, go to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.</p>
Reset to Default	N/A	Click the <b>Reset</b> button to reset the device configuration to its default value.

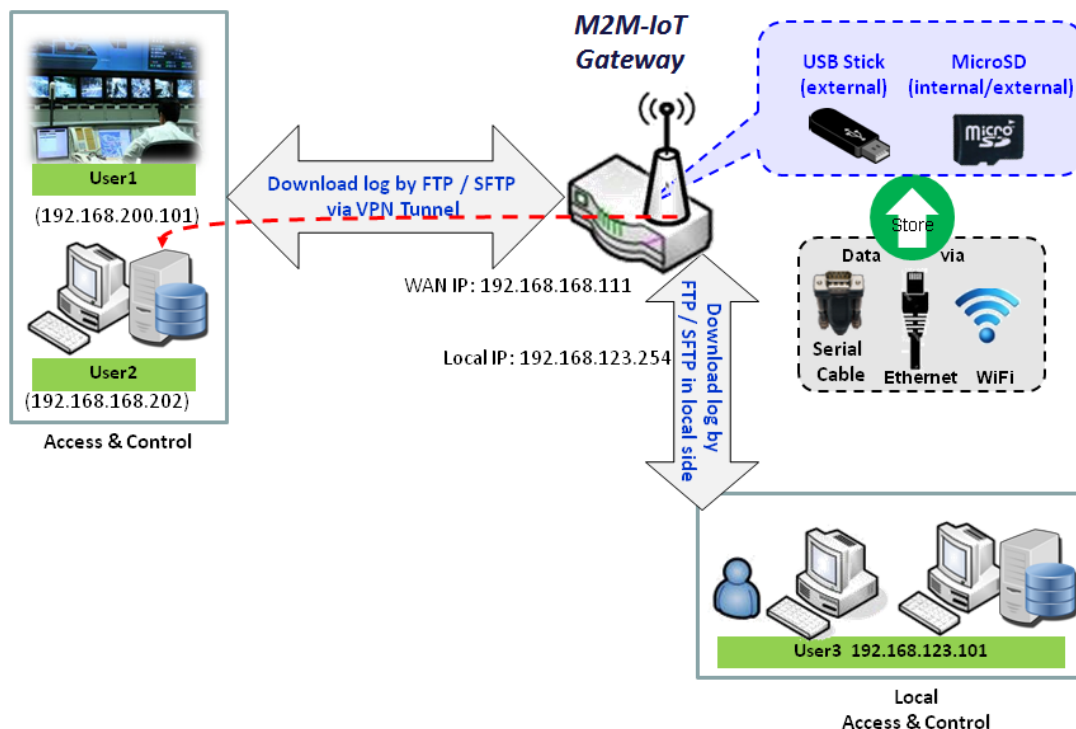

## 6.3 FTP

The File Transfer Protocol (FTP) is a standard network protocol used to transfer computer files between a client and server on a computer network. FTP is built on a client-server model architecture and uses separate control and data connections between the client and the server. FTP users may authenticate themselves with a clear-text sign-in protocol, normally in the form of a username and password, but can connect anonymously if the server is configured to allow it.

For secure transmission that protects the username and password, and encrypts the content, FTP is often secured with SSL/TLS (FTPS). Besides, SSH File Transfer Protocol (SFTP) is sometimes also used instead, but is technologically different.

This gateway embedded FTP / SFTP server for administrator to download the log files to his computer or database. In the following two sections, you can configure the FTP server and create the user accounts that can login to the server. After login to the FTP server, you can browse the log directory and have the permission to download the stored log files and delete the files you have downloaded to make more storage space for further data logs.

The available log files can be system logs (refer to Administration > System Operation > System Log), Network Packets (refer to Administrator > Diagnostic > Packet Analyzer), Data Log (refer to Field Communication > Data Logging > Log File Management), and GNSS Log (refer to Service > Location Tracking > GNSS). With proper configuration for the various log functions that supported on your purchased product, you can download the log via FTP / SFTP connections.

# 4G PoE IIoT Gateway

## 6.3.1 Server Configuration

This section allows user to setup the embedded FTP and SFTP server for retrieving the interested fog files.

Go to **Administration > FTP > Server Configuration** tab.

### Enable FTP Server

FTP Server Configuration

Save

Item	Setting
▶ FTP	<input checked="" type="checkbox"/> Enable
▶ FTP Port	<input type="text" value="21"/>
▶ Timeout	<input type="text" value="300"/> second(s)(60-7200)
▶ Max. Connections per IP	<input type="text" value="2"/> ▼
▶ Max. FTP Clients	<input type="text" value="5"/> ▼
▶ PASV Mode	<input type="checkbox"/> Enable
▶ Port Range of PASV Mode	<input type="text" value="50000"/> ~ <input type="text" value="50031"/>
▶ Auto Report External IP in PASV Mode	<input type="checkbox"/> Enable
▶ ASCII Transfer Mode	<input type="checkbox"/> Enable
▶ FTPS(FTP over SSL/TLS)	<input type="checkbox"/> Enable

Configuration		
Item	Value setting	Description
FTP	The box is unchecked by default.	Check <b>Enable</b> box to activate the embedded FTP Server function. With the FTP Server enabled, you can retrieve or delete the stored log files via FTP connection. Note: The embedded FTP Server is only for log downloading, so no any write permission is implemented for user file upload to the storage.
FTP Port	Port <b>21</b> is set by default	Specify a port number for FTP connection. The gateway will listen for incoming FTP connections on the specified port. <b>Value Range:</b> 1 ~ 65535.
Timeout	<b>300</b> seconds is set by default.	Specify the maximum timeout interval for the FTP connection. Supported range is 60 to 7200 seconds.
Max. Connections per IP	<b>2</b> Clients are set by default.	Specify the maximum number of clients from the same IP address for the FTP connection. Up to 5 clients from the same IP address is supported.
Max. FTP Clients	<b>5</b> Clients are set by default.	Specify the maximum number of clients for the FTP connection. Up to 32 clients is supported.
PASV Mode	Optional setting	Check the <b>Enable</b> box to activate the support of PASV mode for a FTP connection from FTP clients.

## 4G PoE IIoT Gateway

<b>Port Range of PASV Mode</b>	Port <b>50000 ~ 50031</b> is set by default.	Specify the port range to allocate for PASV style data connection. <b><u>Value Range:</u></b> 1024 ~ 65535.
<b>Auto Report External IP in PASV Mode</b>	Optional setting	Check the <b>Enable</b> box to activate the support of overriding the IP address advertising in response to the PASV command.
<b>ASCII Transfer Mode</b>	Optional setting	Check the <b>Enable</b> box to activate the support of ASCII mode data transfers. Binary mode is supported by default.
<b>FTPS (FTP over SSL/TLS)</b>	Optional setting	Check the <b>Enable</b> box to activate the support of secure connections via SSL/TLS.

### Enable SFTP Server

SFTP Server Configuration
Save
▲
✕

Item	Setting
▶ SFTP	<input type="checkbox"/> Enable via <input checked="" type="checkbox"/> LAN via <input checked="" type="checkbox"/> WAN ( WAN-1 <input checked="" type="checkbox"/> WAN-4 <input type="checkbox"/> ) <div></div>
▶ SFTP Port	22

Configuration		
Item	Value setting	Description
<b>SFTP</b>	The box is unchecked by default.	Check <b>Enable</b> box to activate the embedded SFTP Server function. Furthermore, you can check the granted interface(s) for the SFTP connection, via <b>LAN</b> , <b>WAN</b> , or both. <ul style="list-style-type: none"> <li>With the SFTP Server enabled, you can retrieve or delete the stored log files via secure SFTP connection.</li> </ul>
<b>SFTP Port</b>	Default 22	Specify a port number for SFTP connection. The gateway will listen for incoming SFTP connections on the specified port. <b><u>Value Range:</u></b> 1 ~ 65535.

6.3.2 User Account

This section allows user to setup user accounts for logging to the embedded FTP and SFTP server to retrieve the interested fog files.

Go to **Administration > FTP > User Account** tab.

Create/Edit FTP User Accounts

User Account List

AddDelete

ID	User Name	Password	Directory	Permission	Enable	Actions
----	-----------	----------	-----------	------------	--------	---------

When **Add** button is applied, **User Account Configuration** screen will appear.

User Account Configuration

Save

Item	Setting
▶ User Name	<input type="text" value="admin"/>
▶ Password	<input type="password" value="....."/>
▶ Directory	<input type="button" value="Browse"/>
▶ Permission	<div>Read/Write</div>
▶ Enable	<input checked="" type="checkbox"/>

Configuration		
Item	Value setting	Description
User Name	String : non-blank string	Enter the user account for login to the FTP server. <b>Value Range:</b> 1 ~ 15 characters.
Password	String : no blank	Enter the user password for login to the FTP server.
Directory	N/A	Select a root directory after user login.
Permission	<b>Read/Write</b> is selected by default.	Select the Read/write permission. Note: The embedded FTP Server is only for log downloading, so no any write permission is implemented for user file upload to the storage, even <b>Read/Write</b> option is selected.
Enable	The box is checked by default.	Check the box to activate the FTP user account.

## 6.4 Diagnostic

This gateway supports simple network diagnosis tools for the administrator to troubleshoot and find the root cause of the abnormal behavior or traffics passing through the gateway. There can be a Packet Analyzer to help record the packets for a designated interface or specific source/destination host, and another Ping and Tracert tools for testing the network connectivity issues.

### 6.4.1 Diagnostic Tools

The Diagnostic Tools provide some frequently used network connectivity diagnostic tools (approaches) for the network administrator to check the device connectivity.

Go to **Administration > Diagnostic > Diagnostic Tools** tab.

Diagnostic Tools

Item	Setting
Ping Test	Host IP: <input type="text"/> Outer Interface: <span>Auto</span> LAN Source: <span>Default</span> <span>Ping</span>
Tracert Test	Host IP: <input type="text"/> Interface: <span>Auto</span> <span>UDP</span> <span>Tracert</span>
Speed Test	Interface: <span>Auto</span> mode: <span>DL+UL</span> <input type="checkbox"/> SSL <span>Test</span>
Wake on LAN	<input type="text"/> <span>Wake up</span>

Diagnostic Tools		
Item	Value setting	Description
Ping Test	Optional Setting	This allows you to specify an IP / FQDN, the Outer interface (auto, WAN, LAN, or VLAN), and LAN source (default, LAN, or VLAN) as well, so system will try to ping the specified device to test whether it is alive after clicking on the <b>Ping</b> button. A test result window will appear beneath it.
Tracert Test	Optional setting	Trace route (tracert) command is a network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an IP network. Trace route proceeds until all (three) sent packets are lost for more than twice, then the connection is lost and the route cannot be evaluated. First, you need to specify an IP / FQDN, the test interface (LAN, WAN, or Auto) and the protocol (UDP or ICMP), and by default, it is <b>UDP</b> . Then, system will try to trace the specified host to test whether it is alive after clicking on <b>Tracert</b> button. A test result window will appear beneath it.
Speed Test	Optional setting	This allow you to do q quick speed test for verifying the connectivity on specific interface.
Wake on LAN	Optional setting	Wake on LAN (WOL) is an Ethernet networking standard that allows a computer to be turned on or awakened by a network message. You can specify the MAC address of the computer, in your LAN network, to be remotely turned on by clicking on the <b>Wake up</b> command button.

# 4G PoE IIoT Gateway

Save	N/A	Click the <b>Save</b> button to save the configuration.

# 4G PoE IIoT Gateway

## 6.4.2 Packet Analyzer

The Packet Analyzer can capture packets depend on user settings. User can specify interfaces to capture packets and filter by setting rule. Ensure the log storage is available (either embedded SD-Card or external USB Storage), otherwise **Packet Analyzer** cannot be enabled.

Go to **Administration > Diagnostic > Packet Analyzer** tab.

Configuration

Item	Setting
▶ Packet Analyzer	<input type="checkbox"/> Enable
▶ File Name	<input type="text"/>
▶ Split Files	<input type="checkbox"/> Enable File Size : <input type="text" value="200"/> <input type="text" value="KB"/>
▶ Packet Interfaces	<div><div><input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 <input type="checkbox"/> WAN-3 <input type="checkbox"/> WAN-4</div><div><input type="checkbox"/> ASY <input type="text" value="Binary Mode"/></div><div>2.4G : <input type="checkbox"/> VAP-1 <input type="checkbox"/> VAP-2 <input type="checkbox"/> VAP-3 <input type="checkbox"/> VAP-4 <input type="checkbox"/> VAP-5 <input type="checkbox"/> VAP-6 <input type="checkbox"/> VAP-7 <input type="checkbox"/> VAP-8</div><div>5G : <input type="checkbox"/> VAP-1 <input type="checkbox"/> VAP-2 <input type="checkbox"/> VAP-3 <input type="checkbox"/> VAP-4 <input type="checkbox"/> VAP-5 <input type="checkbox"/> VAP-6 <input type="checkbox"/> VAP-7 <input type="checkbox"/> VAP-8</div></div>

Configuration		
Item	Value setting	Description
Packet Analyzer	The box is unchecked by default.	Check <b>Enable</b> box to activate the Packet Analyzer function. If you cannot enable the checkbox, please check if the storage is available or not. Plug in the USB storage and then enable the Package Analyzer function.
File Name	1. An optional setting 2. Blank is set by default, and the default file name is <Interface>_<Date>_<index>.	Enter the file name to save the captured packets in log storage. If <b>Split Files</b> option is also enabled, the file name will be appended with an index code “_<index>”. The extension file name is .pcap.
Split Files	1. An optional setting 2. The default value of <b>File Size</b> is 200 KB.	Check <b>enable</b> box to split file whenever log file reaching the specified limit. If the <b>Split Files</b> option is enabled, you can further specify the <b>File Size</b> and <b>Unit</b> for the split files. <b>Value Range:</b> 10 ~ 99999. NOTE: <b>File Size</b> cannot be less than 10 KB
Packet Interfaces	An optional setting	Define the interface(s) that <b>Packet Analyzer</b> should work on. At least, one interface is required, but multiple selections are also accepted. The supported interfaces can be: <ul style="list-style-type: none"><li>● <b>WAN:</b> When the WAN is enabled at <b>Physical Interface</b>, it can be selected here.</li><li>● <b>ASY:</b> This means the serial communication interface. It is used to capture packets appearing in the <b>Field Communication</b>.</li></ul>

# 4G PoE IIoT Gateway

		Therefore, it can only be selected when specific field communication protocol, like Modbus, is enabled. Select <b>Binary mode</b> or <b>String mode</b> for the serial interface. <ul style="list-style-type: none"><li>● <b>VAP</b>: This means the virtual AP. When WiFi and VAP are enabled, it can be selected here.</li></ul>
Save	N/A	Click the <b>Save</b> button to save the configuration.
Undo	N/A	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

Once you enabled the Packet Analyzer function on specific Interface(s), you can further specify some filter rules to capture the packets which matched the rules.

Capture Filters

Item	Setting
Filter	<input type="checkbox"/> Enable
Source MACs	<div></div>
Source IPs	<div></div>
Source Ports	<div></div>
Destination MACs	<div></div>
Destination IPs	<div></div>
Destination Ports	<div></div>

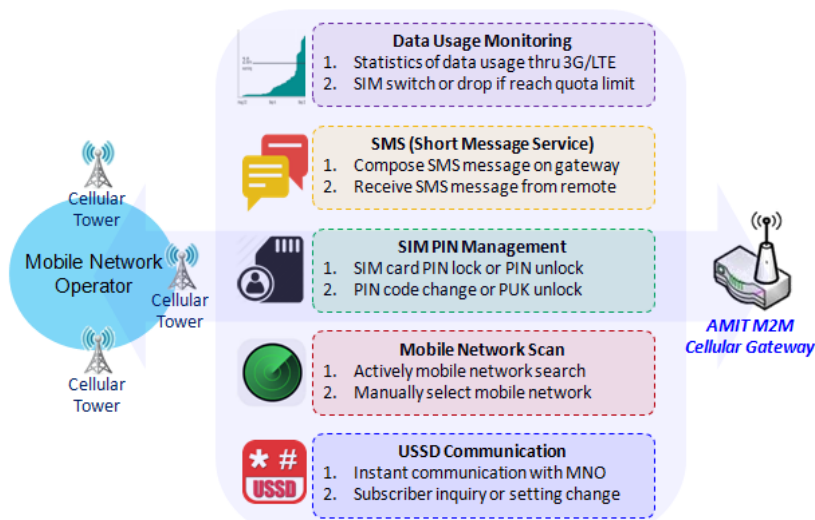

Capture Fitters		
Item	Value setting	Description
Filter	Optional setting	Check <b>Enable</b> box to activate the Capture Filter function.
Source MACs	Optional setting	Define the filter rule with <b>Source MACs</b> , which means the source MAC address of packets. Packets which match the rule will be captured. Up to 10 MACs are supported, but they must be separated with “;”, e.g. AA:BB:CC:DD:EE:FF; 11:22:33:44:55:66 The packets will be captured when match any one MAC in the rule.
Source IPs	Optional setting	Define the filter rule with <b>Source IPs</b> , which means the source IP address of packets.

## 4G PoE IIoT Gateway

		<p>Packets which match the rule will be captured.</p> <p>Up to 10 IPs are supported, but they must be separated with “;”, e.g. 192.168.1.1; 192.168.1.2</p> <p>The packets will be captured when match any one IP in the rule.</p>
<b>Source Ports</b>	Optional setting	<p>Define the filter rule with <b>Source Ports</b>, which means the source port of packets.</p> <p>The packets will be captured when match any port in the rule.</p> <p>Up to 10 ports are supported, but they must be separated with “;”, e.g. 80; 53</p> <p><b><u>Value Range:</u></b> 1 ~ 65535.</p>
<b>Destination MACs</b>	Optional setting	<p>Define the filter rule with <b>Destination MACs</b>, which means the destination MAC address of packets.</p> <p>Packets which match the rule will be captured.</p> <p>Up to 10 MACs are supported, but they must be separated with “;”, e.g. AA:BB:CC:DD:EE:FF; 11:22:33:44:55:66</p> <p>The packets will be captured when match any one MAC in the rule.</p>

Chapter 7 Service

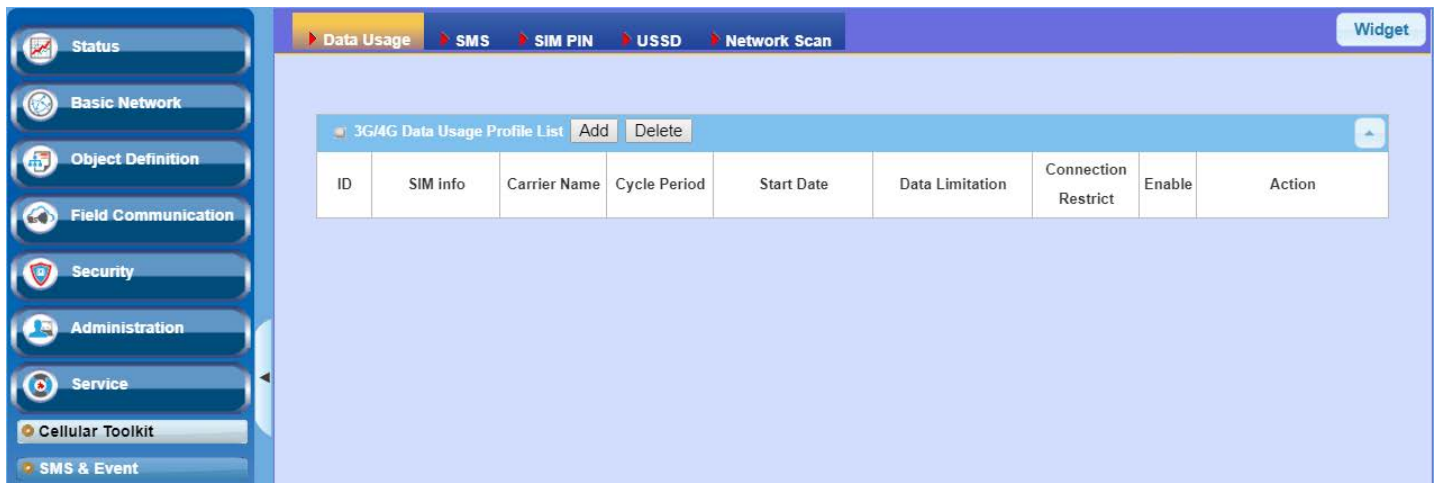

7.1 Cellular Toolkit

Besides cellular data connection, you may also like to monitor data usage of cellular WAN, sending text message through SMS, changing PIN code of SIM card, communicating with carrier/ISP by USSD command, or doing a cellular network scan for diagnostic purpose.

In Cellular Toolkit section, it includes several useful features that are related to cellular configuration or application. You can configure settings of Data Usage, SMS, SIM PIN, USSD, and Network Scan here. Please note at least a valid SIM card is required to be

inserted to device before you continue settings in this section.

# 4G PoE IIoT Gateway

## 7.1.1 Data Usage

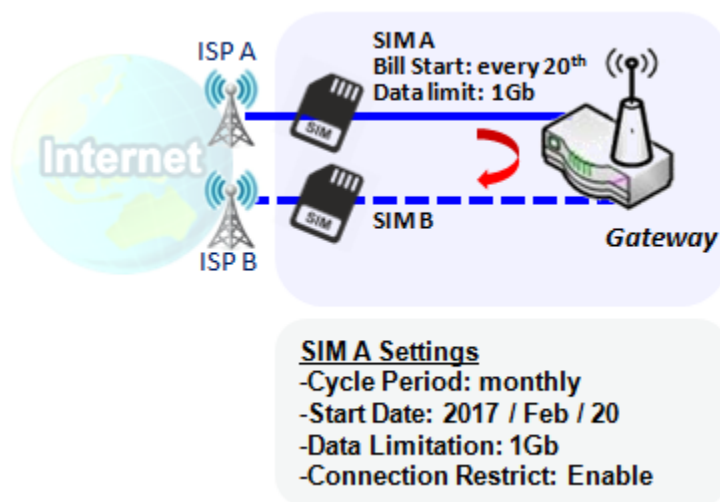

Most of data plan for cellular connection is with a limited amount of data usage. If data usage has been over limited quota, either you will get much lower data throughput that may affect your daily operation, or you will get a 'bill shock' in the next month because carrier/ISP charges a lot for the over-quota data usage.

With help from Data Usage feature, device will monitor cellular data usage continuously and take actions. If data usage reaches limited quota, device can be set to drop the cellular data connection right away. Otherwise, if secondary SIM card is inserted, device will switch to secondary SIM and establish another cellular data connection with secondary SIM automatically.

If Data Usage feature is enabled, all history of cellular data usage can be viewed at **Status > Statistics & Reports > Cellular Usage** tab.

3G/4G Data Usage Profile List <span>Add</span> <span>Delete</span>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action
1	3G/4G SIM A	ISP A	1 Monthly	Mon Apr 01 2019 00:00:00 GMT+0800	1GB	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<span>Edit</span> <input type="checkbox"/> Select

### 3G/4G Data Usage

Data Usage feature enabling gateway device to continuously monitor cellular data usage and take actions. In the diagram, quota limit of SIM A is **1Gb** per month and bill start date is **20<sup>th</sup>** of every month. The device is smart to start a new calculation of data usage on every **20<sup>th</sup>** of month. Enable Connection Restrict will force gateway device to drop cellular connection of SIM A when data usage reaches quota limit (1Gb in this case). If SIM failover feature is configured in **Internet Setup**, then gateway will switch to SIM B and establish a new cellular data connection automatically.

# 4G PoE IIoT Gateway

## Data Usage Setting

Go to **Service > Cellular Toolkit > Data Usage** tab.

Before finished settings for Data Usage, you need to know bill start date, bill period, and quota limit of data usage according to your data plan. You can ask this information from your carrier or ISP.

### Create / Edit 3G/4G Data Usage Profile

3G/4G Data Usage Profile List <span>Add</span> <span>Delete</span>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action

When **Add** button is applied, 3G/4G Data Usage Profile Configuration screen will appear. You can create up to four data usage profiles, one profile for each SIM card used in the Gateway.

3G/4G Data Usage Profile Configuration	
Item	Setting
▶ SIM Select	3G/4G ▼ SIM A ▼
▶ Carrier Name	<input type="text"/>
▶ Cycle Period	Days ▼ <input type="text"/>
▶ Start Date	2019 ▼ / April ▼ / 1 ▼
▶ Data Limitation	<input type="text"/> KB ▼
▶ Connection Restrict	<input type="checkbox"/> Enable
▶ Enable	<input checked="" type="checkbox"/> Enable

3G/4G Data Usage Profile Configuration		
Item	Setting	Description
<b>SIM Select</b>	<b>3G/4G-1</b> and <b>SIM A</b> by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ), and a SIM card bound to the selected cellular interface to configure its data usage profile. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
<b>Carrier Name</b>	It is an optional item.	Fill in the Carrier Name for the selected SIM card for identification.
<b>Cycle Period</b>	<b>Days</b> by default	The first box has three types for cycle period. They are <b>Days</b> , <b>Weekly</b> and <b>Monthly</b> . <b>Days:</b> For per Days cycle periods, you have to further specify the number of days in the second box. <b>Value Range:</b> 1 ~ 90 days. <b>Weekly, Monthly:</b> The cycle period is one week or one month.
<b>Start Date</b>	N/A	Specify the date to start measure network traffic. Please don't select the day before now, otherwise, the traffic statistics will be incorrect.
<b>Data Limitation</b>	N/A	Specify the allowable data limitation for the defined cycle period.

## 4G PoE IIoT Gateway

---

<b>Connection Restrict</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the connection restriction function. During the specified cycle period, if the actual data usage exceeds the allowable data limitation, the cellular connection will be forced to disconnect.
<b>Enable</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the data usage profile.

# 4G PoE IIoT Gateway

## 7.1.2 SMS

Short Message Service (SMS) is a text messaging service, which is used to be widely-used on mobile phones. It uses standardized communications protocols to allow mobile phones or cellular devices to exchange short text messages in an instant and convenient way.

### SMS Setting

Go to **Service > Cellular Toolkit > SMS** tab

With this gateway device, you can send SMS text messages or browse received SMS messages as you usually do on a cellular phone.

### Setup SMS Configuration

Configuration	SMS Setup	Managing Events Setup	Notifying Events Setup
Item	Setting		
Physical Interface	3G/4G-1		
SMS	<input type="checkbox"/> Enable SIM Status: SIM_A		
SMS Storage	SIM Card Only		
SMS Space	<input type="checkbox"/> Enable & Keep Available Space (1-10)		

Configuration Item	Value setting	Description
Physical Interface	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the following SMS function configuration. <b>Note: 3G/4G-2</b> is only available for for the product with dual cellular module.
SMS	The box is checked by default	This is the SMS switch. If the box checked that the SMS function enable, if the box unchecked that the SMS function disable.
SIM Status	N/A	Depend on currently SIM status. The possible value will be <b>SIM_A</b> or <b>SIM_B</b> .
SMS Storage	The box is <b>SIM Card Only</b> by default	This is the SMS storage location. Currently the option only <b>SIM Card Only</b> .
SMS Space	The box is unchecked by default	Check the <b>Enable</b> box and specify a number (1-10) for message count to reserve some available storage space and prevent it from run out of storage. The oldest message(s) will be deleted when the SMS storage is going to full.
Save	N/A	Click the <b>Save</b> button to save the settings

## 7.1.3 SIM PIN

With most cases in the world, users need to insert a SIM card (a.k.a. UICC) into end devices to get on cellular network for voice service or data surfing. The SIM card is usually released by mobile operators or service providers. Each SIM card has a unique number (so-called ICCID) for network owners or service providers to identify each subscriber. As SIM card plays an important role between service providers and subscribers, some security mechanisms are required on SIM card to prevent any unauthorized access.

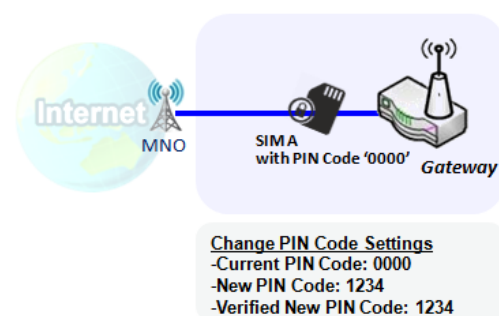

Enabling a PIN code in SIM card is an easy and effective way of protecting cellular devices from unauthorized access. This gateway device allows you to activate and manage PIN code on a SIM card through its web GUI.

### Activate PIN code on SIM Card

This gateway device allows you to activate PIN code on SIM card. This example shows how to activate PIN code on SIM-A for 3G/4G-1 with default PIN code “0000”.

### Change PIN code on SIM Card

This gateway device allows you to change PIN code on SIM card. Following the example above, you need to type original PIN code “0000”, and then type new PIN code with ‘1234’ if you like to set new PIN code as ‘1234’. To confirm the new PIN code you type is what you want, you need to type new PIN code ‘1234’ in Verified New PIN Code again.

### Unlock SIM card by PUK Code

If you entered incorrect PIN code at configuration page for 3G/4G-1 WAN over three times, and then it will cause SIM card to be locked by PUK code. Then you have to call service number to get a PUK code to unlock SIM card. In the diagram, the PUK code is “12345678” and new PIN code is “5678”.

# 4G PoE IIoT Gateway

## SIM PIN Setting

Go to **Service** > **Cellular Toolkit** > **SIM PIN** Tab

With the SIM PIN Function window, it allows you to enable or disable SIM lock (which means protected by PIN code), or change PIN code. You can also see the information of remaining times of failure trials as we mentioned earlier. If you run out of these failure trials, you need to get a PUK code to unlock SIM card.

### Select a SIM Card

 Configuration  

Item	Setting
▶ Physical Interface	3G/4G-1 ▼
▶ SIM Status	SIM-A Ready
▶ SIM Selection	SIM-A ▼ 

Configuration Window		
Item	Value setting	Description
Physical Interface	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to change the SIM PIN setting for the selected SIM Card. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
SIM Status	N/A	Indication for the selected SIM card and the SIM card status. The status could be <b>Ready</b> , <b>Not Insert</b> , or <b>SIM PIN</b> . <b>Ready</b> -- SIM card is inserted and ready to use. It can be a SIM card without PIN protection or that SIM card is already unlocked by correct PIN code. <b>Not Insert</b> -- No SIM card is inserted in that SIM slot. <b>SIM PIN</b> -- SIM card is protected by PIN code, and it's not unlocked by a correct PIN code yet. That SIM card is still at locked status.
SIM Selection	N/A	Select the SIM card for further SIM PIN configuration. Press the <b>Switch</b> button, then the Gateway will switch SIM card to another one. After that, you can configure the SIM card.

# 4G PoE IIoT Gateway

## Enable / Change PIN Code

Enable or Disable PIN code (password) function, and even change PIN code function.

 **SIM function**

Item	Setting
▶ PIN Lock	<input checked="" type="checkbox"/> Enable PIN Code: <input type="text"/> (4~8 digits)
▶ Remaining times	N/A

SIM function Window		
Item Setting	Value setting	Description
<b>SIM lock</b>	Depend on SIM card	Click the <b>Enable</b> button to activate the SIM lock function. For the first time you want to enable the SIM lock function, you have to fill in the PIN code as well, and then click <b>Save</b> button to apply the setting.
<b>Remaining times</b>	Depend on SIM card	Represent the remaining trial times for the SIM PIN unlocking.
<b>Save</b>	N/A	Click the <b>Save</b> button to apply the setting.
<b>Change PIN Code</b>	N/A	Click the <b>Change PIN code</b> button to change the PIN code (password). If the <b>SIM Lock</b> function is not enabled, the <b>Change PIN code</b> button is disabled. In the case, if you still want to change the PIN code, you have to enable the SIM Lock function first, fill in the PIN code, and then click the <b>Save</b> button to enable. After that, You can click the <b>Change PIN code</b> button to change the PIN code.

When **Change PIN Code** button is clicked, the following screen will appear.

Item	Setting
▶ Current PIN Code	<input type="text"/> (4~8 digits)
▶ New PIN Code	<input type="text"/> (4~8 digits)
▶ Verified New PIN Code	<input type="text"/> (4~8 digits)

Item	Value Setting	Description
<b>Current PIN Code</b>	A Must filled setting	Fill in the current (old) PIN code of the SIM card.
<b>New PIN Code</b>	A Must filled setting	Fill in the new PIN Code you want to change.
<b>Verified New PIN Code</b>	A Must filled setting	Confirm the new PIN Code again.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to change the PIN code with specified new PIN code.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to cancel the changes and keep current PIN code.

**Note:** If you changed the PIN code for a certain SIM card, you must also change the corresponding PIN code specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page.

## 4G PoE IIoT Gateway

Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

### Unlock with a PUK Code

The PUK Function window is only available for configuration if that SIM card is locked by PUK code. It means that SIM card is locked and needs additional PUK code to unlock. Usually it happens after too many trials of incorrect PIN code, and the remaining times in SIM Function table turns to 0. In this situation, you need to contact your service provider and request a PUK code for your SIM card, and try to unlock the locked SIM card with the provided PUK code. After unlocking a SIM card by PUK code successfully, the SIM lock function will be activated automatically.

Item	Setting
▶ PUK status	PUK unlock.
▶ Remaining times	N/A
▶ PUK Code	<input type="text"/> (8 digits)
▶ New PIN Code	<input type="text"/> (4~8 digits)

PUK Function Window		
Item	Value setting	Description
PUK status	PUK Unlock / PUK Lock	Indication for the PUK status. The status could be <b>PUK Lock</b> or <b>PUK Unlock</b> . As mentioned earlier, the SIM card will be locked by PUK code after too many trials of failure PIN code. In this case, the PUK Status will turns to <b>PUK Lock</b> . In a normal situation, it will display <b>PUK Unlock</b> .
Remaining times	Depend on SIM card	Represent the remaining trial times for the PUK unlocking. Note : <b>DO NOT make the remaining times down to zero, it will damage the SIM card FOREVER !</b> Call for your ISP's help to get a correct PUK and unlock the SIM if you don't have the PUK code.
PUK Code	A Must filled setting	Fill in the PUK code (8 digits) that can unlock the SIM card in PUK unlock status.
New PIN Code	A Must filled setting	Fill in the New PIN Code (4~8 digits) for the SIM card. You have to determine your new PIN code to replace the old, forgotten one. Keep the PIN code (password) in mind with care.
Save	N/A	Click the <b>Save</b> button to apply the setting.

**Note:** If you changed the PUK code and PIN code for a certain SIM card, you must also change the corresponding PIN code specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page. Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

# 4G PoE IIoT Gateway

## 7.1.4 USSD

Unstructured Supplementary Service Data (USSD) is a protocol used by GSM cellular telephones to communicate with the service provider's computers. USSD can be used for WAP browsing, prepaid callback service, mobile-money services, location-based content services, menu-based information services, and as part of configuring the phone on the network.

An USSD message is up to 182 alphanumeric characters in length. Unlike Short Message Service (SMS) messages, USSD messages create a real-time connection during an USSD session. The connection remains open, allowing a two-way exchange of a sequence of data. This makes USSD more responsive than services that use SMS.

USSD Command	

### USSD Scenario

USSD allows you to have an instant bi-directional communication with carrier/ISP. In the diagram, the USSD command ‘\*135#’ is referred to data roaming services. After sending that USSD command to carrier, you can get a response at window USSD Response. Please note the USSD command varies for different carriers/ISP.

# 4G PoE IIoT Gateway

## USSD Setting

Go to **Service > Cellular Toolkit > USSD** tab.

In "USSD" page, there are four windows for the USSD function. The "Configuration" window can let you specify which 3G/4G module (physical interface) is used for the USSD function, and system will show which SIM card in the module is the current used one. The second window is the "USSD Profile List" and it shows all your defined USSD profiles that store pre-commands for activating an USSD session. An "Add" button in the window can let you add one new USSD profile and define the command for the profile in the third window, the "USSD Profile Configuration". When you want to start the activation of an USSD connection session to the USSD server, select the USSD profile or type in the correct pre-command, and then click on the "Send" button for the session. The responses from the USSD server will be displayed beneath the "USSD Command" line. When commands typed in the "USSD Command" field are sent, received responses will be displayed in the "USSD Response" blank space. User can communicate with the USSD server by sending USSD commands and getting USSD responses via the gateway.

## USSD Configuration

Configuration

Item	Setting

# 4G PoE IIoT Gateway

## 7.1.5 Network Scan

"Network Scan" function can let administrator specify the device how to connect to the mobile system for data communication in each 3G/4G interface. For example, administrator can specify which generation of mobile system is used for connection, 2G, 3G or LTE. Moreover, he can define their connection sequence for the gateway device to connect to the mobile system automatically. Administrator also can scan the mobile systems in the air manually, select the target operator system and apply it. The manual scanning approach is used for problem diagnosis.

### Network Scan Setting

Go to **Service > Cellular Toolkit > Network Scan** tab.

In "Network Scan" page, there are two windows for the Network Scan function. The "Configuration" window can let you select which 3G/4G module (physical interface) is used to perform Network Scan, and system will show the current used SIM card in the module. You can configure each 3G/4G WAN interface by executing the network scanning one after another. You can also specify the connection sequence of the targeted generation of mobile system, 2G/3G/LTE.

### Network Scan Configuration

Configuration		
Item	Setting	
▶ Physical Interface	3G/4G-1 ▼	SIM Status: SIM_A
▶ Network Type	LTE Only ▼	
▶ Scan Approach	Auto ▼	

Configuration		
Item	Value setting	Description
<b>Physical Interface</b>	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the network scan function. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
<b>SIM Status</b>	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
<b>Network Type</b>	<b>Auto</b> is selected by default.	Specify the network type for the network scan function. It can be Auto, 2G Only, 2G prefer, 3G Only, 3G prefer, or LTE Only. When <b>Auto</b> is selected, the network will be register automatically; If the <b>prefer</b> option is selected, network will be register for your option first; If the <b>only</b> option is selected, network will be register for your option only.
<b>Scan Approach</b>	<b>Auto</b> is selected by default.	When <b>Auto</b> selected, cellular module register automatically. If the <b>Manually</b> option is selected, a <b>Network Provider List</b> screen appears. Press <b>Scan</b> button to scan for the nearest base stations. Select (check the box) the preferred base stations then click <b>Apply</b> button to apply settings.

## 7.2 SMS & Event

SMS & Event handling is the application that allows administrator to setup the pre-defined events, handlers, or response behavior with individual profiles. With properly configuring the event handling function, administrator can easily and remotely obtain the status and information via the purchased gateway. Moreover, he can also handle and manage some important system related functions, even the field bus devices and D/O devices which are already well connected to.

The supported events are categorized into two groups: the **managing events** and **notifying events**.

The **managing events** are the events that are used to manage the gateway or change the setting / status of the specific functionality of the gateway. On receiving the managing event, the gateway will take action to change the functionality, collect the required status for administration, and also change the status of a certain connected field bus device simultaneously.

The **notifying events** are the events that some related objects have been triggered and take corresponding actions on the occurrence of the events. It could be an event generated from the connected sensor, or a certain connected field bus device for alerting the administrator something happened with SMS message, Email, and SNMP Trap, etc...

For ease of configuration, administrator can create and edit the common pre-defined managing / notifying event profiles for taking instant reaction on a certain event or managing the devices for some advanced useful purposes. For example, sending/receiving remote managing SMS for the gateway's routine maintaining, the

# 4G PoE IIoT Gateway

---

field bus device status monitoring, digital sensors detection controlling, and so on. All of such management and notification function can be realized effectively via the Event Handling feature.

The following is the summary lists for the provided profiles, and events:

**(Note:** The available profiles and events could be different for the purchased product.)

- Profiles (Rules):
  - SMS Configuration and Accounts
  - Email Accounts
  - Digital Input (DI) profiles
  - Digital Output (DO) profiles
  - Modbus Managing Event profiles
  - Modbus Notifying Event profiles
  - Remote Host profiles
  - MQTT Publish Message profiles
- Managing Events:
  - Trigger Type: SMS, SNMP Trap, and Digital Input (DI).
  - Actions: Get the Network Status; or Configure the LAN/VLAN behavior, WIFI behavior, NAT behavior, Firewall behavior, VPN behavior, System Management, Administration, Digital Output behavior, connected Modbus devices, Remote Host, and MQTT Publish Message.
- Notifying Events:
  - Trigger Type: Digital Input, Power Change, Connection Change (WAN, LAN & VLAN, WiFi, DDNS), Administration, Modbus, and Data Usage.
  - Actions: Notify the administrator with SMS, Syslog, SNMP Trap or Email Alert; Change the status of connected Digital Output or Modbus devices; Sending collected information to Remote Host; and Publishing MQTT Message to a designated MQTT Broker.

To use the event handling function, First of all, you have to enable the event management setting and configure the event details with the provided profile settings. You can create or edit pre-defined profiles for individual managing / notifying events. The profile settings are separated into several items; they are the SMS Account Definition, Email Service Definition, Digital Input (DI) Profile Configuration, Digital Output (DO) Profile Configuration, Modbus Definition, Remote Host Configuration, and MQTT Publish Message.

Then, you have to configure each managing / notifying event with identifying the event's trigger condition, and the corresponding actions (reaction for the event) for the event. For each event, more than one action can be activated simultaneously.

# 4G PoE IIoT Gateway

## 7.2.1 Configuration

Go to **Service > SMS & Event > Configuration** Tab.

Event handling is the service that allows administrator to setup the pre-defined events, handlers, or response behavior with individual profiles.

### Enable Event Management

Configuration		
Item	Setting	
▶ Event Management	<input type="checkbox"/> Enable	

Configuration		
Item	Value setting	Description
<b>Event Management</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Event Management function.

### Enable SMS Management

To use the SMS management function, you have to configure some important settings first.

SMS Configuration		
Item	Setting	
▶ Message Prefix	<input type="checkbox"/> Enable <input type="text"/>	
▶ Physical Interface	<div>3G/4G-1 ▼</div> SIM Status: SIM_A	
▶ Delete Managed SMS after Processing	<input type="checkbox"/> Enable	

SMS Configuration		
Item	Value setting	Description
<b>Message Prefix</b>	The box is unchecked by default	Click the <b>Enable</b> box to enable the SMS prefix for validating the received SMS. Once the function is enabled, you have to enter the prefix behind the checkbox. The received managing events SMS must have the designated prefix as an initial identifier, then corresponding handlers will become effective for further processing.
<b>Physical Interface</b>	The box is 3G/4G-1 by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to configure the SMS management setting.

# 4G PoE IIoT Gateway

**Note:** 3G/4G-2 is only available for for the product with dual cellular module.

<b>SIM Status</b>	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
<b>Delete Managed SMS after Processing</b>	The box is unchecked by default	Check the <b>Enable</b> box to delete the received managing event SMS after it has been processed.

## Create / Edit SMS Account

Setup the SMS Account for managing the gateway through the SMS. It supports up to a maximum of 5 accounts.

SMS Account List <span>Add</span> <span>Delete</span> <span>⬆</span> <span>✕</span>						
ID	Phone Number	Phone Description	Application	Send confirmed SMS	Enable	Actions

▶ Protocol Type	TCP ▼
▶ Port Number	<input type="text"/>
▶ Prefix Message	<input type="text"/>
▶ Suffix Message	<input type="text"/>
▶ Enable	<input type="checkbox"/>
<span>Save</span>	

## 4G PoE IIoT Gateway

Remote Host Configuration		
Item	Value setting	Description
Host Name	1. String format 2. A Must filled setting	Specify the Remote Host profile name. <b><u>Value Range:</u></b> -1 ~ 64 characters.
Host IP	1. A Must filled setting 2. IP Address format.	Specify the IP address for the Remote Host. IPv4 Format.
Protocol Type	1. A Must filled setting 2. TCP is selected by default	Specify the protocol to access the Remote Host. It could be <b>TCP or UDP</b> .
Port Number	1. A Must filled setting	Specify the Port number for accessing the Remote Host. <b><u>Value Range:</u></b> 1 ~ 65535.
Prefix Message	1. String format 2. An Optional filled setting	Specify the Prefix Message string as pre-defined identification for accessing the remote host, if required. <b><u>Value Range:</u></b> -1 ~ 64 characters.
Suffix Message	1. String format 2. An Optional filled setting	Specify the Suffix Message string as pre-defined identification for accessing the remote host, if required. <b><u>Value Range:</u></b> -1 ~ 64 characters.
Enable	The box is unchecked by default.	Click <b>Enable</b> box to activate this profile setting.
Save	NA	Click the <b>Save</b> button to save the configuration
Undo	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

7.2.2 Managing Events

Managing Events allow administrator to define the relationship (rule) among event trigger, handlers and response.

Go to **Service > SMS & Event > Managing Events** Tab.

Enable Managing Events

Configuration

Item	Setting
Managing Events	<input checked="" type="checkbox"/> Enable

Configuration

Item	Value setting	Description
Managing Events	The box is unchecked by default	Check the <b>Enable</b> box to activate the Managing Events function.

Create / Edit Managing Event Rules

Setup the Managing Event rules. It supports up to a maximum of 128 rules.

Managing Event List

AddDelete

ID	Event Name	Event	Trigger Type	Description	Enable	Actions
----	------------	-------	--------------	-------------	--------	---------

When **Add** or **Edit** button is applied, the **Managing Event Configuration** screen will appear.

Description	String format : any text.	Enter a brief description for the Notifying Event.
Action	All box is unchecked by default.	<p>Specify at least one action to take when the expected event is triggered.</p> <p><b>Digital Output:</b> Select <b>Digital Output</b> checkbox and a DO profile you defined as</p>

		<p>the action for the event;</p> <p><b>SMS:</b> Select <b>SMS</b>, and the gateway will send out a SMS to all the defined SMS accounts as the action for the event;</p> <p><b>Syslog:</b> Select <b>Syslog</b> and select/unselect the Enable Checkbox to as the action for the event;</p> <p><b>SNMP Trap:</b> Select <b>SNMP Trap</b>, and the gateway will send out SNMP Trap to the defined SNMP Event Receivers as the action for the event;</p> <p><b>Email Alert:</b> Select <b>Email Alert</b>, and the gateway will send out an Email to the defined Email accounts as the action for the event;</p> <p><b>Modbus:</b> Select <b>Modbus</b> and a Modbus Notifying Event profile you defined as the action for the event;</p> <p><b>Remote Host:</b> Select <b>Remote Host</b> checkbox and a Remote Host profile you defined as the action for the event;</p> <p><i>Note: The available Event Type could be different for the purchased product.</i></p>
Time Schedule	(0) Always is selected by default	Select a time scheduling rule for the Notifying Event.
Notifying Events	The box is unchecked by default.	Click <b>Enable</b> box to activate this Notifying Event setting.
Save	NA	Click the <b>Save</b> button to save the configuration
Undo	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

## Chapter 8 Status

### 8.1 Dashboard

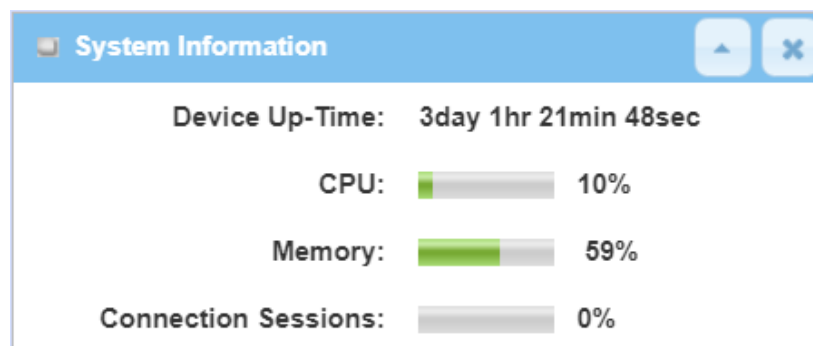

#### 8.1.1 Device Dashboard

The **Device Dashboard** window shows the current status in graph or tables for quickly understanding the operation status for the gateway. They are the System Information, System Information History, and Network Interface Status. The display will be refreshed once per second.

From the menu on the left, select **Status > Dashboard > Device Dashboard** tab.

#### System Information Status

The **System Information** screen shows the device Up-time and the resource utilization for the CPU, Memory, and Connection Sessions.

System Information History

The **System Information History** screen shows the statistic graphs for the CPU and memory.

Network Interface Status

The **Network Interface Status** screen shows the statistic information for each network interface of the gateway. The statistic information includes the Interface Type, Upload Traffic, Download Traffic, and Current Upload / Download Traffic.

Network Interface Status					
Device	Type	Upload Traffic	Download Traffic	Current Upload Traffic	Current Download Traffic
eth2	Ethernet	211 (MB)	321 (MB)	3 (KB)	3 (KB)
eth2.1	Ethernet	24 (MB)	71 (KB)	64 (Bytes)	0 (Bytes)
eth2.2	Ethernet	168 (MB)	283 (MB)	3 (KB)	3 (KB)
br0	Ethernet	19 (MB)	31 (MB)	42 (Bytes)	0 (Bytes)
ra0	Wireless LAN	1 (MB)	1 (MB)	0 (Bytes)	0 (Bytes)
rai0	Wireless LAN	21 (MB)	42 (MB)	0 (Bytes)	0 (Bytes)
ra1	Wireless LAN	0 (Bytes)	0 (Bytes)	0 (Bytes)	0 (Bytes)
rai1	Wireless LAN	362 (Bytes)	4 (KB)	0 (Bytes)	0 (Bytes)
tun0	Ethernet	0 (Bytes)	0 (Bytes)	0 (Bytes)	0 (Bytes)

## 8.2 Basic Network

### 8.2.1 WAN & Uplink Status

Go to **Status > Basic Network > WAN & Uplink** tab.

The **WAN & Uplink Status** window shows the current status for different network type, including network configuration, connecting information, modem status and traffic statistics. The display will be refreshed on every five seconds.

#### WAN interface IPv4 Network Status

**WAN interface IPv4 Network Status** screen shows status information for IPv4 network.

WAN Interface IPv4 Network Status										
ID	Interface	WAN Type	Network Type	IP Addr.	Subnet Mask	Gateway	DNS	MAC Address	Conn. Status	Action
WAN-1	3G/4G	3G/4G	NAT	10.59.152.73	255.255.255.252	10.59.152.74	168.95.1.1, 168.95.192.1	N/A	Connected 0 day 0:26:38	Edit
WAN-2		Disable								Edit

WAN interface IPv4 Network Status		
Item	Value setting	Description
ID	N/A	It displays corresponding WAN interface WAN IDs.
Interface	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
WAN Type	N/A	It displays the method which public IP address is obtained from your ISP. Depending on the model purchased, it can be Static IP, Dynamic IP, PPPoE, PPTP, L2TP, 3G/4G.
Network Type	N/A	It displays the network type for the WAN interface(s). Depending on the model purchased, it can be NAT, Routing, Bridge, or IP Pass-through.
IP Addr.	N/A	It displays the public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
Subnet Mask	N/A	It displays the Subnet Mask for public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
Gateway	N/A	It displays the Gateway IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
DNS	N/A	It displays the IP address of DNS server obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
MAC Address	N/A	It displays the MAC Address for your ISP to allow you for Internet access. Note: Not all ISP may require this field.
Conn. Status	N/A	It displays the connection status of the device to your ISP.

# 4G PoE IIoT Gateway

		Status are Connected or disconnected.
		This area provides functional buttons.
Action	N/A	<b>Renew</b> button allows user to force the device to request an IP address from the DHCP server. Note: <b>Renew</b> button is available when DHCP WAN Type is used and WAN connection is disconnected.
		<b>Release</b> button allows user to force the device to clear its IP address setting to disconnect from DHCP server. Note: <b>Release</b> button is available when DHCP WAN Type is used and WAN connection is connected.
		<b>Connect</b> button allows user to manually connect the device to the Internet. Note: Connect button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b> ) and WAN connection status is disconnected.
		<b>Disconnect</b> button allows user to manually disconnect the device from the Internet. Note: <b>Connect</b> button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b> ) and WAN connection status is connected.

## WAN interface IPv6 Network Status

WAN interface IPv6 Network Status screen shows status information for IPv6 network.

WAN Interface IPv6 Network Status								
ID	Interface	WAN type	Link-local IP Address	Global IP Address	Conn. Status	Action		
WAN-1	3G/4G	IPv6		/64	Disconnected	<div>Edit</div>		

WAN interface IPv6 Network Status		
Item	Value setting	Description
ID	N/A	It displays corresponding WAN interface WAN IDs.
Interface	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
WAN Type	N/A	It displays the method which public IP address is obtained from your ISP. WAN type setting can be changed from <b>Basic Network &gt; IPv6 &gt; Configuration</b> .
Link-local IP Address	N/A	It displays the LAN IPv6 Link-Local address.
Global IP Address	N/A	It displays the IPv6 global IP address assigned by your ISP for your Internet connection.
Conn. Status	N/A	It displays the connection status. The status can be connected, disconnected and connecting.
Action	N/A	This area provides functional buttons. <b>Edit Button</b> when pressed, web-based utility will take you to the IPv6

# 4G PoE IIoT Gateway

configuration page. (**Basic Network > IPv6 > Configuration.**)

## LAN Interface Network Status

**LAN Interface Network Status** screen shows IPv4 and IPv6 information of LAN network.

LAN Interface Network Status					
IPv4 Address	IPv4 Subnet Mask	IPv6 Link-local Address	IPv6 Global Address	MAC Address	Action
192.168.66.1	255.255.254.0	fe80::250:18ff:fe3a:4a5f	/64	00:50:18:3A:4A:5F	<a href="#">Edit IPv4</a> <a href="#">Edit IPv6</a>

LAN Interface Network Status		
Item	Value setting	Description
IPv4 Address	N/A	It displays the current IPv4 IP Address of the gateway This is also the IP Address user use to access Router's Web-based Utility.
IPv4 Subnet Mask	N/A	It displays the current mask of the subnet.
IPv6 Link-local Address	N/A	It displays the current LAN IPv6 Link-Local address. This is also the IPv6 IP Address user use to access Router's Web-based Utility.
IPv6 Global Address	N/A	It displays the current IPv6 global IP address assigned by your ISP for your Internet connection.
MAC Address	N/A	It displays the LAN MAC Address of the gateway
Action	N/A	This area provides functional buttons. <b>Edit IPv4 Button</b> when press, web-based utility will take you to the Ethernet LAN configuration page. ( <b>Basic Network &gt; LAN &amp; VLAN &gt; Ethernet LAN</b> tab). <b>Edit IPv6 Button</b> when press, web-based utility will take you to the IPv6 configuration page. ( <b>Basic Network &gt; IPv6 &gt; Configuration.</b> )

## 3G/4G Modem Status

**3G/4G Modem Status List** screen shows status information for 3G/4G WAN network(s).

3G/4G Modem Status List					
Interface	Card Information	Link Status	Signal Strength	Network Name	Action
3G/4G	ZM8620	Connected	70% (-69dBm)	Chunghwa Telecom (LTE)	<a href="#">Detail</a>

3G/4G Modem Status List		
Item	Value setting	Description
Physical Interface	N/A	It displays the type of WAN physical interface. Note: Some device model may support two 3G/4G modules. Their physical interface name will be <b>3G/4G-1</b> and <b>3G/4G-2</b> .

# 4G PoE IIoT Gateway

<b>Card Information</b>	N/A	It displays the vendor's 3G/4G modem model name.
<b>Link Status</b>	N/A	It displays the 3G/4G connection status. The status can be Connecting, Connected, Disconnecting, and Disconnected.
<b>Signal Strength</b>	N/A	It displays the 3G/4G wireless signal level.
<b>Network Name</b>	N/A	It displays the name of the service network carrier.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to renew the information.
<b>Action</b>	N/A	This area provides functional buttons. <b>Detail Button</b> when press, windows of detail information will appear. They are the Modem Information, SIM Status, and Service Information. Refer to next page for more.

When the **Detail** button is pressed, 3G/4G modem information windows such as Modem Information, SIM Status, Service Information, Signal Strength / Quality, and Error Message will appear.

## Interface Traffic Statistics

Interface Traffic Statistics screen displays the Interface's total transmitted packets.

Interface Traffic Statistics				
ID	Interface	Received Packets(Mb)	Transmitted Packets(Mb)	Action
WAN-1	3G/4G	217.13	167.09	Reset
WAN-2		-	-	

Interface Traffic Statistics		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>Received Packets (Mb)</b>	N/A	It displays the downstream packets (Mb). It is reset when the device is rebooted.
<b>Transmitted Packets (Mb)</b>	N/A	It displays the upstream packets (Mb). It is reset when the device is rebooted.

## 8.2.2 LAN & VLAN Status

Go to **Status > Basic Network > LAN & VLAN** tab.

### Client List

The **Client List** shows you the LAN Interface, IP address, Host Name, MAC Address, and Remaining Lease Time of each device that is connected to this gateway.

LAN Client List				
LAN Interface	IP Address	Host Name	MAC Address	Remaining Lease Time
Ethernet	Dynamic / 192.168.66.100	amit25613572	00-13-3B-0E-5B-1D	00:15:00

LAN Client List		
Item	Value setting	Description
LAN Interface	N/A	Client record of LAN Interface. String Format.
IP Address	N/A	Client record of IP Address Type and the IP Address. Type is String Format and the IP Address is IPv4 Format.
Host Name	N/A	Client record of Host Name. String Format.
MAC Address	N/A	Client record of MAC Address. MAC Address Format.
Remaining Lease Time	N/A	Client record of Remaining Lease Time. Time Format.

# 4G PoE IIoT Gateway

## 8.2.3 WiFi Status

Go to **Status > Basic Network > WiFi** tab.

The **WiFi Status** window shows the overall statistics of WiFi VAP entries.

### WiFi Virtual AP List

The WiFi Virtual AP List shows all of the virtual AP information on each WiFi module. The **Edit** button allows for quick configuration changes.

WiFi Module One Virtual AP List									
Op. Band	ID	WiFi Enable	Op. Mode	SSID	Channel	WiFi System	Auth.&Security	MAC Address	Action
2.4G	VAP-1	<input checked="" type="checkbox"/>	AP Router	Staff_2.4G	1	b/g/n Mixed	WPA2-PSK(AES)	00:50:18:3A:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-2	<input checked="" type="checkbox"/>	AP Router	default	1	b/g/n Mixed	Open(None)	02:50:18:30:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-3	<input type="checkbox"/>	AP Router	default	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:31:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-4	<input type="checkbox"/>	AP Router	default	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:32:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-5	<input type="checkbox"/>	AP Router	default	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:33:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-6	<input type="checkbox"/>	AP Router	default	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:34:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-7	<input type="checkbox"/>	AP Router	default	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:35:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>
2.4G	VAP-8	<input type="checkbox"/>	AP Router	Guest_2.4G	1	b/g/n Mixed	WPA2-PSK(AES)	02:50:18:36:4A:5F	<a href="#">Edit</a> <a href="#">QR Code</a>

WiFi Virtual AP List		
Item	Value setting	Description
Op. Band	N/A	It displays the WiFi Operation Band (2.4G or 5G) of VAP.
ID	N/A	It displays the ID of VAP.
WiFi Enable	N/A	It displays whether the VAP wireless signal is enabled or disabled.
Op. Mode	N/A	The WiFi Operation Mode of VAP. Depends of device model, modes are AP Router, WDS Only and WDS Hybrid, Universal Repeater and Client.
SSID	N/A	It displays the network ID of VAP.
Channel	N/A	It displays the wireless channel used.
WiFi System	N/A	The WiFi System of VAP.
Auth. & Security	N/A	It displays the authentication and encryption type used.
MAC Address	N/A	It displays MAC Address of VAP.
Action	N/A	Click the <b>Edit</b> button to make a quick access to the WiFi configuration page. ( <b>Basic Network &gt; WiFi &gt; Configuration</b> tab) The <b>QR Code</b> button allow you to generate QR code for quick connect to the VAP by scanning the QR code.

WiFi IDS Status

The WiFi IDS Status shows all the WIDS statistics on each WiFi module.

WiFi Module One IDS Status								
Authentication Frame	Association Request Frame	Re-association Request Frame	Probe Request Frame	Disassociation Frame	Deauthentication Frame	EAP Request Frame	Malicious Data Frame	Action
0	0	0	0	0	0	0	0	Reset

WiFi IDS Status		
Item	Value setting	Description
Authentication Frame	N/A	It displays the receiving Authentication Frame count.
Association Request Frame	N/A	It displays the receiving Association Request Frame count.
Re-association Request Frame	N/A	It displays the receiving Re-association Request Frame count.
Probe Request Frame	N/A	It displays the receiving Probe Request Frame count.
Disassociation Frame	N/A	It displays the receiving Disassociation Frame count.
Deauthentication Frame	N/A	It displays the receiving Deauthentication Frame count.
EAP Request Frame	N/A	It displays the receiving EAP Request Frame count.
Malicious Data Frame	N/A	It displays the number of receiving unauthorized wireless packets.
Action	N/A	Click the <b>Reset</b> button to clear the entire statistic and reset counter to 0.

- Ensure WIDS function is enabled
- Go to **Basic Network > WiFi > Advanced Configuration** tab
- Note that the WIDS of **2.4GHz** or **5GHz WiFi** should be configured **separately**.

# 4G PoE IIoT Gateway

## WiFi Traffic Statistic

The WiFi Traffic Statistic shows all the received and transmitted packets on each WiFi module.

WiFi Module One Traffic Statistics				
Op. Band	ID	Received Packets	Transmitted Packets	Action
2.4G	VAP-1	11592	3617	Reset
2.4G	VAP-2	0	0	Reset
2.4G	VAP-3	0	0	Reset
2.4G	VAP-4	0	0	Reset
2.4G	VAP-5	0	0	Reset
2.4G	VAP-6	0	0	Reset
2.4G	VAP-7	0	0	Reset
2.4G	VAP-8	0	0	Reset

WiFi Traffic Statistic		
Item	Value setting	Description
Op. Band	N/A	It displays the Wi-Fi Operation Band (2.4G or 5G) of VAP.
ID	N/A	It displays the VAP ID.
Received Packets	N/A	It displays the number of reveived packets.
Transmitted Packet	N/A	It displays the number of transmitted packets.
Action	N/A	Click the <b>Reset</b> button to clear individual VAP statistics.
Refresh Button	N/A	Click the <b>Refresh</b> button to update the entire VAP Traffic Statistic instantly.

8.2.4 DDNS Status

Go to **Status > Basic Network > DDNS** tab.

The **DDNS Status** window shows the current DDNS service in use, the last update status, and the last update time to the DDNS service server.

DDNS Status

DDNS Status List				
Host Name	Provider	Effective IP	Last Update Status	Last Update Time

DDNS Status		
Item	Value Setting	Description
Host Name	N/A	It displays the name you entered to identify DDNS service provider
Provider	N/A	It displays the DDNS server of DDNS service provider
Effective IP	N/A	It displays the public IP address of the device updated to the DDNS server
Last Update Status	N/A	It displays whether the last update of the device public IP address to the DDNS server has been successful (Ok) or failed (Fail).
Last Update Time	N/A	It displays time stamp of the last update of public IP address to the DDNS server.
Refresh	N/A	The <b>refresh</b> button allows user to force the display to refresh information.

## 8.3 Security

The screenshot shows the 'Security' tab in the gateway's web interface. The left sidebar contains navigation options: Status, Dashboard, Basic Network, Security (selected), VPN, Firewall, Administration, and Statistics & Reports. The main content area is titled 'VPN' and 'Firewall'. It displays four status windows: 'IPSec Tunnel Status' (with an 'Edit' button), 'OpenVPN Server Status' (with an 'Edit' button), 'OpenVPN Client Status' (with 'Edit' and 'Detail' buttons), and 'L2TP Server Status' (with an 'Edit' button'). Each window contains a table of active connections. The 'OpenVPN Client Status' table shows one client named 'Master\_client' connected via 'WAN 1' to 'm2mcluster.de' with a virtual IP of '172.17.0.190' and a connection time of '00:00:00:44'. The 'L2TP Client Status' window is also visible at the bottom.

### 8.3.1 VPN Status

Go to **Status > Security > VPN** tab.

The **VPN Status** widow shows the overall VPN tunnel status. The display will be refreshed on every five seconds.

#### IPSec Tunnel Status

**IPSec Tunnel Status** windows show the configuration for establishing IPSec VPN connection and current connection status.

IPSec Tunnel Status <span>Edit</span>							
ID	Tunnel Name	Tunnel Scenario	Local Subnets	Remote IP/FQDN	Remote Subnets	Conn. Time	Status

IPSec Tunnel Status		
Item	Value setting	Description
Tunnel Name	N/A	It displays the tunnel name you have entered to identify.
Tunnel Scenario	N/A	It displays the Tunnel Scenario specified.
Local Subnets	N/A	It displays the Local Subnets specified.

# 4G PoE IIoT Gateway

Remote IP/FQDN	N/A	It displays the Remote IP/FQDN specified.
Remote Subnets	N/A	It displays the Remote Subnets specified.
Conn. Time	N/A	It displays the connection time for the IPSec tunnel.
Status	N/A	It displays the Status of the VPN connection. The status displays are Connected, Disconnected, Wait for traffic, and Connecting.
Edit Button	N/A	Click on Edit Button to change IPSec setting, web-based utility will take you to the IPSec configuration page. ( <b>Security &gt; VPN &gt; IPSec</b> tab)

## OpenVPN Server Status

According to OpenVPN configuration, the **OpenVPN Server/Client Status** shows the status and statistics for the OpenVPN connection from the server side or client side.

OpenVPN Server Status Edit					
ID	User Name	Remote IP/FQDN	Virtual IP/Mac	Conn. Time	Status
OpenVPN Server Status					
Item	Value setting	Description			
User Name	N/A	It displays the Client name you have entered for identification.			
Remote IP/FQDN	N/A	It displays the public IP address (the WAN IP address) of the connected OpenVPN Client			
Virtual IP/MAC	N/A	It displays the virtual IP/MAC address assigned to the connected OpenVPN client.			
Conn. Time	N/A	It displays the connection time for the corresponding OpenVPN tunnel.			
Status	N/A	It displays the connection status of the corresponding OpenVPN tunnel. The status can be Connected, or Disconnected.			

## OpenVPN Client Status

OpenVPN Client Status Edit Detail							
ID	OpenVPN Client Name	Interface	Remote IP/FQDN	Remote Subnet	Virtual IP	Conn. Time	Conn. Status
OpenVPN Client Status							
Item	Value setting	Description					
OpenVPN Client Name	N/A	It displays the Client name you have entered for identification.					
Interface	N/A	It displays the WAN interface specified for the OpenVPN client connection.					
Remote IP/FQDN	N/A	It displays the peer OpenVPN Server's Public IP address (the WAN IP address) or FQDN.					
Remote Subnet	N/A	It displays the Remote Subnet specified.					
TUN/TAP Read(bytes)	N/A	It displays the TUN/TAP Read Bytes of OpenVPN Client.					
TUN/TAP Write(bytes)	N/A	It displays the TUN/TAP Write Bytes of OpenVPN Client.					
TCP/UDP	N/A	It displays the TCP/UDP Read Bytes of OpenVPN Client.					

## 4G PoE IIoT Gateway

---

<b>Read(bytes)</b>		
<b>TCP/UDP Write(bytes)</b>	N/A	It displays the TCP/UDP Write Bytes of OpenVPN Client. Connection
<b>Conn. Time</b>	N/A	It displays the connection time for the corresponding OpenVPN tunnel.
<b>Conn. Status</b>	N/A	It displays the connection status of the corresponding OpenVPN tunnel. The status can be Connected, or Disconnected.

# 4G PoE IIoT Gateway

## L2TP Server/Client Status

**L2TP Server/Client Status** shows the configuration for establishing L2TP tunnel and current connection status.

L2TP Server Status						
Edit						
ID	User Name	Remote IP	Remote Virtual IP	Remote Call ID	Conn. Time	Status
L2TP Server Status						
Item	Value setting		Description			
User Name	N/A		It displays the login name of the user used for the connection.			
Remote IP	N/A		It displays the public IP address (the WAN IP address) of the connected L2TP client.			
Remote Virtual IP	N/A		It displays the IP address assigned to the connected L2TP client.			
Remote Call ID	N/A		It displays the L2TP client Call ID.			
Conn. Time	N/A		It displays the connection time for the L2TP tunnel.			
Status	N/A		It displays the Status of each of the L2TP client connection. The status displays Connected, Disconnect, Connecting			
Edit	N/A		Click on <b>Edit</b> Button to change L2TP server setting, web-based utility will take you to the L2TP server page. ( <b>Security &gt; VPN &gt; L2TP</b> tab)			

L2TP Client Status							
Edit							
ID	L2TP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status
L2TP Client Status							
Item	Value setting		Description				
Client Name	N/A		It displays Name for the L2TP Client specified.				
Interface	N/A		It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.				
Virtual IP	N/A		It displays the IP address assigned by Virtual IP server of L2TP server.				
Remote IP/FQDN	N/A		It displays the L2TP Server's Public IP address (the WAN IP address) or FQDN.				
Default Gateway/Remote Subnet	N/A		It displays the specified IP address of the gateway device used to connect to the internet to connect to the L2TP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the L2TP server –the remote subnet.				
Conn. Time	N/A		It displays the connection time for the L2TP tunnel.				
Status	N/A		It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.				
Edit	N/A		Click on <b>Edit</b> Button to change L2TP client setting, web-based utility will take you to the L2TP client page. ( <b>Security &gt; VPN &gt; L2TP</b> tab)				

# 4G PoE IIoT Gateway

## PPTP Server/Client Status

**PPTP Server/Client Status** shows the configuration for establishing PPTP tunnel and current connection status.

PPTP Server Status

Edit

ID	User Name	Remote IP	Remote Virtual IP	Remote Call ID	Conn. Time	Status
PPTP Server Status						
Item	Value setting		Description			
User Name	N/A		It displays the login name of the user used for the connection.			
Remote IP	N/A		It displays the public IP address (the WAN IP address) of the connected PPTP client.			
Remote Virtual IP	N/A		It displays the IP address assigned to the connected PPTP client.			
Remote Call ID	N/A		It displays the PPTP client Call ID.			
Conn. Time	N/A		It displays the connection time for the PPTP tunnel.			
Status	N/A		It displays the Status of each of the PPTP client connection. The status displays Connected, Disconnect, and Connecting.			
Edit Button	N/A		Click on <b>Edit</b> Button to change PPTP server setting, web-based utility will take you to the PPTP server page. ( <b>Security &gt; VPN &gt; PPTP</b> tab)			

PPTP Client Status							Edit		
ID	PPTP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status		
PPTP Client Status									
Item		Value setting		Description					
Client Name		N/A		It displays Name for the PPTP Client specified.					
Interface		N/A		It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.					
Virtual IP		N/A		It displays the IP address assigned by Virtual IP server of PPTP server.					
Remote IP/FQDN		N/A		It displays the PPTP Server's Public IP address (the WAN IP address) or FQDN.					
Default Gateway / Remote Subnet		N/A		It displays the specified IP address of the gateway device used to connect to the internet to connect to the PPTP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the PPTP server –the remote subnet.					
Conn. Time		N/A		It displays the connection time for the PPTP tunnel.					
Status		N/A		It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.					
Edit Button		N/A		Click on <b>Edit</b> Button to change PPTP client setting, web-based utility will take you to the PPTP server page. ( <b>Security &gt; VPN &gt; PPTP</b> tab)					

# 4G PoE IIoT Gateway

## 8.3.2 Firewall Status

Go to **Status > Security > Firewall Status** Tab.

The **Firewall Status** provides user a quick view of the firewall status and current firewall settings. It also keeps the log history of the dropped packets by the firewall rule policies, and includes the administrator remote login settings specified in the Firewall Options. The display will be refreshed on every five seconds.

By clicking the icon [+], the status table will be expanded to display log history. Clicking the **Edit** button the screen will be switched to the configuration page.

### Packet Filter Status

Packet Filters

Edit

▲

✕

Activated Filter Rule	Detected Contents	IP	Time
-----------------------	-------------------	----	------

Packet Filter Status

Item	Value setting	Description
Activated Filter Rule	N/A	This is the Packet Filter Rule name.
Detected Contents	N/A	This is the logged packet information, including the source IP, destination IP, protocol, and destination port –the TCP or UDP. String format: Source IP to Destination IP : Destination Protocol (TCP or UDP)
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure Packet Filter Log Alert is enabled.*

*Refer to **Security > Firewall > Packet Filter** tab. Check Log Alert and save the setting.*

### URL Blocking Status

URL Blocking

Edit

Activated Blocking Rule	Blocked URL	IP	Time
-------------------------	-------------	----	------

URL Blocking Status

Item	Value setting	Description
Activated Blocking Rule	N/A	This is the URL Blocking Rule name.
Blocked URL	N/A	This is the logged packet information.
IP	N/A	The Source IP (IPv4) of the logged packet.

# 4G PoE IIoT Gateway

Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")
------	-----	---

Note: Ensure URL Blocking Log Alert is enabled.

Refer to **Security > Firewall > URL Blocking** tab. Check Log Alert and save the setting.

## Web Content Filter Status

Web Content Filters

Edit

Activated Filter Rule	Detected Contents	IP	Time
Web Content Filter Status			
Item	Value setting	Description	
Activated Filter Rule	N/A	Logged packet of the rule name. String format.	
Detected Contents	N/A	Logged packet of the filter rule. String format.	
IP	N/A	Logged packet of the Source IP. IPv4 format.	
Time	N/A	Logged packet of the Date Time. Date time format ("Month" "Day" "Hours":"Minutes":"Seconds")	

Note: Ensure Web Content Filter Log Alert is enabled.

Refer to **Security > Firewall > Web Content Filter** tab. Check Log Alert and save the setting.

## MAC Control Status

MAC Control

Edit

Activated Control Rule	Blocked MAC Addresses	IP	Time
------------------------	-----------------------	----	------

MAC Control Status

Item	Value setting	Description
Activated Control Rule	N/A	This is the MAC Control Rule name.
Blocked MAC Addresses	N/A	This is the MAC address of the logged packet.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure MAC Control Log Alert is enabled.

Refer to **Security > Firewall > MAC Control** tab. Check Log Alert and save the setting.

# 4G PoE IIoT Gateway

## Application Filters Status

Application Filters			
Edit			
Filtered Application Category	Filtered Application Name	IP	Time
Application Filters Status			
Item	Value setting	Description	
Filtered Application Category	N/A	The name of the Application Category being blocked.	
Filtered Application Name	N/A	The name of the Application being blocked.	
IP	N/A	The Source IP (IPv4) of the logged packet.	
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")	

Note: Ensure Application Filter Log Alert is enabled.

Refer to **Security > Firewall > Application Filter** tab. Check Log Alert and save the setting.

## IPS Status

IPS			
Edit			
Detected Intrusion		IP	Time
IPS Firewall Status			
Item	Value setting	Description	
Detected Intrusion	N/A	This is the intrusion type of the packets being blocked.	
IP	N/A	The Source IP (IPv4) of the logged packet.	
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")	

Note: Ensure IPS Log Alert is enabled.

Refer to **Security > Firewall > IPS** tab. Check Log Alert and save the setting.

# 4G PoE IIoT Gateway

## Firewall Options Status

Options			
Edit			
Stealth Mode	SPI	Discard Ping from WAN	Remote Administrator Management
Disable	Disable	Disable	IP: 192.168.121.54, User Name: admin, Time: Apr 1 11:14:54

Firewall Options Status		
Item	Value setting	Description
Stealth Mode	N/A	Enable or Disable setting status of Stealth Mode on Firewall Options. String Format: Disable or Enable
SPI	N/A	Enable or Disable setting status of SPI on Firewall Options. String Format : Disable or Enable
Discard Ping from WAN	N/A	Enable or Disable setting status of Discard Ping from WAN on Firewall Options. String Format: Disable or Enable
Remote Administrator Management	N/A	Enable or Disable setting status of Remote Administrator. If Remote Administrator is enabled, it shows the currently logged in administrator's source IP address and login user name and the login time. Format: IP : "Source IP", User Name: "Login User Name", Time: "Date time" Example: IP: 192.168.127.39, User Name: admin, Time: Mar 3 01:34:13

*Note: Ensure Firewall Options Log Alert is enabled.  
Refer to **Security > Firewall > Options** tab. Check Log Alert and save the setting.*

## 8.4 Administration

### 8.4.1 Configure & Manage Status

Go to **Status > Administration > Configure & Manage** tab.

The **Configure & Manage Status** window shows the status for managing remote network devices. The type of management available in your device is depended on the device model purchased. The commonly used ones are the SNMP, TR-069, and UPnP. The display will be refreshed on every five seconds.

#### SNMP Linking Status

**SNMP Link Status** screen shows the status of current active SNMP connections.

SNMP Linking Status						
User Name	IP Address	Port	Community	Auth. Mode	Privacy Mode	SNMP Version

SNMP Link Status		
Item	Value setting	Description
User Name	N/A	It displays the user name for authentication. This is only available for SNMP version 3.
IP Address	N/A	It displays the IP address of SNMP manager.
Port	N/A	It displays the port number used to maintain connection with the SNMP manager.
Community	N/A	It displays the community for SNMP version 1 or version 2c only.
Auth. Mode	N/A	It displays the authentication method for SNMP version 3 only.
Privacy Mode	N/A	It displays the privacy mode for version 3 only.
SNMP Version	N/A	It displays the SNMP Version employed.

#### SNMP Trap Information

**SNMP Trap Information** screen shows the status of current received SNMP traps.

SNMP Trap Information		
Trap Level	Time	Trap Event

SNMP Trap Information		
Item	Value setting	Description
Trap Level	N/A	It displays the trap level.
Time	N/A	It displays the timestamp of trap event.
Trap Event	N/A	It displays the IP address of the trap sender and event type.

## TR-069 Status

TR-069 Status screen shows the current connection status with the TR-068 server.

TR-069 Status	
Link Status	
Off	

TR-069 Status		
Item	Value setting	Description
Link Status	N/A	It displays the current connection status with the TR-068 server. The connection status is either On when the device is connected with the TR-068 server or Off when disconnected.

## 8.4.2 Log Storage Status

Go to **Status > Administration > Log Storage** tab.

The **Log Storage Status** screen shows the status for selected device storage.

### Log Storage Status

**Log Storage Status** screen shows the status of current the selected device storage. The status includes Device Description, Usage, File System, Speed, and status.

Storage Information					
Device Select	Device Description	Usage	File System	Speed	Status

## 8.5 Statistics & Report

### 8.5.1 Connection Session

Go to **Status > Statistics & Reports > Connection Session** tab.

**Internet Surfing Statistic** shows the connection tracks on this router.

Internet Surfing List (14 entries)					
PreviousNextFirstLastExport (.xml)Export (.csv)					
Refresh					
User Name	Protocol	Internal IP & Port	MAC	External IP & Port	Duration Time
	UDP	192.168.127.58:3847		88.198.95.100:1194	2019/04/01 12:09~

WIDE-DHCPv6

Dynamic Host Configuration Protocol for IPv6 (DHCPv6) clients, servers, and relay agents.

Version: 20080615

Copyright (C) 1998-2004 WIDE Project.

BSD License: <https://sourceforge.net/projects/wide-dhcpv6/>

Python version 2.7.12

This Python distribution contains no GNU General Public Licensed

(GPLed) code so it may be used in proprietary projects just like prior

Python distributions. There are interfaces to some GNU code but these are entirely optional

OpenPAM Radula

This software was developed for the FreeBSD Project by ThinkSec AS and

Network Associates Laboratories, the Security Research Division of

Network Associates, Inc. under DARPA/SPAWAR contract N66001-01-C-8035

("CBOSS"), as part of the DARPA CHATS research program.
