

8 Channel Video Receive Unit with 1 Bi-directional Data Channel plus Ethernet and Dual Redundant Operation.

The **AMG4784ER-DR-SF** is a rackmount eight channel video receive unit designed to receive 8 video signals and transmit and receive 1 data signal plus full duplex 100BaseT Ethernet connectivity over one singlemode fibre with Dual Redundant operation.

The **AMG4784ER-DR-SF** is designed to plug into an AMG2009 or AMG2015 subrack, which in turn fits into a 19" rack system.

The **AMG4784E-DR-SF** is designed to operate with **AMG4783E-DR-SF** or rackmount equivalent **AMG4783ER-DR-SF** eight channel video transmit unit in a point to point configuration.

Introduction

Unit Functional Schematic

The **AMG4784ER-DR-SF** drops off up to 8 video and 1 data and audio signals transmitted from the **AMG4783E-DR-SF**.

It also transmits up to 1 data and audio channels to the **AMG4783E-DR-SF**.

Ethernet connectivity is also provided between the two units.

As each unit regenerates the optical signal, the optical dynamic range between each optically connected node is 17dB.

Dual Redundant Operation

The **AMG4783E-DR-SF** transmits and receives the optical signals from both primary and secondary optical channels. These optical channels are transmitted on the same optical fibre in opposite directions, operating at different wavelengths. The primary channel operates on 1550nm and the secondary channel on 1310nm.

The **AMG4783E-DR-SF** receives and drops off a data signal transmitted from an **AMG4784E-DR-SF** receiver. It then inserts video and a data signal onto the outgoing optical signal. In normal operation the video and data signals are transmitted on the primary output and the data received from the primary input. The secondary optical input is independent and is regenerated on the secondary output.

At the **AMG4784E-DR-SF** receiver if the primary input signal is not present, the unit will shut down the secondary output to inform the **AMG4783E-DR-SF** that the primary signal route is not OK. The **AMG4783E-DR-SF** will then send out the video and data signals on its secondary output in the opposite direction. As the primary input at the **AMG4784E-DR-SF** is not present the data signal will now be taken from the secondary optical input, thus maintaining integrity of the data transmission.

Optical Connection

The **AMG4784ER-DR-SF** is connected as illustrated below when used with an **AMG4783E-DR-SF** 8-channel transmit unit acting as a point to point system.

Connections

Video Output Connections

No. of channels8
Connectors75 ohm BNC Socket.
Output Impedance75 ohm terminated.
Output Level1 Volt p-p nominal
Frequency Response.....10Hz to 7MHz.

Optical Connections

PRIMARY OPTO OUT

ConnectorLC/PC
Primary Optical Launch Power-5dBm
Wavelength1550nm
Secondary Optical Sensitivity-22dBm
Wavelength1310nm

PRIMARY OPTO IN

ConnectorLC/PC
Primary Optical Sensitivity-22dBm
Wavelength1550nm
Secondary Optical Launch Power-5dBm
Wavelength1310nm

Power Connection

Power supplyfrom plug in connection on the AMG2009 / AMG2015 subrack
Power consumption10 Watts max.

Ethernet Connection

Ethernet Data ConnectorRJ45
InterfaceAuto-negotiation up to 100BASE-TX full duplex
Ethernet Data RateMaximum 50Mbps/s total Ethernet traffic on fibre

Data and Audio Channel Connections

DATA CHANNEL A

Data Channel A1 channel
Data ConnectorRJ45
Channel A InterfaceOn Board Data Interface – RS232, RS422 or RS485. Selected by slide switch above the RJ45 connector.

RS232 – switch position - high (closest to BNC connections)
RS422 – switch position – middle
RS485 – switch position – low (furthest from BNC connections)

DATA CHANNEL B

Data Channel BNot Present

Data and Audio Channel Configuration

Data and Audio Channel Configuration

The **AMG4784E-DR-SF** and rackmount equivalent **AMG4784ER-DR-SF** sends and receives data to/from Channel A. Channel B is not available. Channel A is a single data interface selectable by the user with the slide switch on the rear panel.

Data Interface Connections Channel A

RJ45 Pin No.	Channel A			Cat 5/6 Cable Colour Code T568B
	RS485 [switch low]	RS422 [switch mid]	RS232 [switch high]	
1		IN + (A)	GND	White/orange
2		IN - (B)	IN	Orange
3				White/green
4				Blue
5				White/blue
6				Green
7	IN/OUT + (A)	OUT + (A)	N/A	White/brown
8	IN/OUT - (B)	OUT - (B)	OUT	Brown

Note: (A) or (B) in brackets in above table refers to RS485 / RS422 data specification, not Channel A, Channel B.

Data Channel A Configuration

Channel A is always present and allows for a RS232, RS422 (full duplex, four wire) or RS485 (half duplex, two wire) interface depending on the position of the switch located above the RJ45 connector. The switch signifies the presence of the X16004 Low Speed Data/Audio Interface Board. If there are LED's present on the RJ45 connector then an X16003 Ethernet Interface Board is fitted.

The data input for both the RS485 and the RS422 modes detects a tri-state input condition by monitoring the differential voltage level across the input. A differential level below 600mV positive or negative will be detected as a tri-state condition. A level above 600mV positive or negative will be detected as a logic 1 or logic zero respectively. It is important therefore to terminate the RS485 bus or the RS422 input bus using 120Ω if a pre-bias is present on the RS485 or RS422 bus.

A large number of third party equipment manufacturers apply a pre-bias on their RS485 bus. This pre-bias is applied by pulling one arm of the RS485 bus high (+5 volts) and the other arm low (0 volts) using high value resistors within the third party equipment. In order to ensure that the AMG equipment detects a tri-state condition, then these resistors should have a value above 5kΩ. If the third party bias resistors are less the 750Ω the bus can be double or triple terminated as required to ensure that a tri-state level is detected.

Note: The Data Channel A is shipped from the factory set up for RS485 operation unless otherwise requested.

Front Panel Indicators

Power LED

Power	Green	-	unit powered
	Off	-	no power applied to unit

Video Output LED's

Video Present CH1-8	Green	-	video signal present on output BNC
	Org	-	channel present but no video on O/P BNC
	Off	-	no video channel present

Fibre Optic LED's

Primary Opto Sync TX	Green	-	optical channel transmitting
	Off	-	optical channel not transmitting
Primary Opto Sync RX	Green	-	optical channel receiving
	Org	-	optical channel receiving but not sync.
	Off	-	optical channel not receiving
Secondary Opto Sync TX	Green	-	optical channel transmitting
	Off	-	optical channel not transmitting
Secondary Opto Sync RX	Green	-	optical channel receiving
	Org	-	optical channel receiving but not sync.
	Off	-	optical channel not receiving

Low Speed Data LEDs

Channel A

Data Present TX (RS485 or RS422) ...	Green	-	logic zero (+V, -V) present on IN+, IN-
	Red	-	logic one (-V,+V) present on IN+, IN-
	Off	-	tri-state off or no connection on IN+, IN-
Data Present TX (RS232)	Green	-	logic zero (+V) present on input IN+
	Red	-	logic transitions present on input IN+
	Off	-	logic one (-V) present on input IN+

This represents the data signals being transmitted on the optical fibre

Data Present RX (RS485 or RS422) ...	Green	-	logic zero (+V,-V) present on OUT+, OUT-
	Red	-	logic one (-V,+V) present on OUT+, OUT-
	Off	-	tri-state off or no connection on OUT+, OUT-
Data Present RX (RS232)	Green	-	logic zero (+V) present on OUT+
	Red	-	logic transitions present on OUT+
	Off	-	logic one (-V) present on OUT+

This represents the data signals being received on the optical fibre

Physical Information

Dimensions

Height 3U Plug-in
Width 14HP
Depth 170mm excluding connectors
Weight 1000grams

Mounting Details

The unit is designed to be mounted within an AMG2009 or AMG2015 Subrack on standard card guides.

Removal / replacement from / to the Case

Note: - The AMG unit PCB's are static sensitive. Handle with proper care and use normal electrostatic discharge (ESD) procedures. Use properly grounded protection (for example, wrist straps) when handling the PCB.

To remove units from the case to access the data expansion boards and the daughter boards, remove the 2 or 4 fixing screws on the rear panel and slide the PCB's out of the case. Ensure that the fibres do not snag or get trapped.

To replace the PCB's into the case, slide the PCB's gently into the case aligning the boards with the appropriate slots. Ensure that the fibre do not snag or get trapped.

Safety

AMG Optical Fibre Products use Class 1 laser systems in accordance with EN 60825-2:2000.

It is always advisable to follow good practice when working with optical fibre systems. This includes:

- Do not stare with unprotected eyes or with any unapproved collimating device at fibre ends or connector faces, or point them at other people.
- Use only approved filtered or attenuating viewing aids

For other safety issues and advice on good practice associated with optical fibre systems, please see EN 60825-2:2000 or your local safety officer.

Maintenance and Repair

There are no user serviceable parts within AMG products. See unit data sheet for full specification. In case of problem or failure, please call your local support centre or contact: **AMG Systems Ltd.** at 3 The Omega Centre, Stratton Business Park, Biggleswade, Beds., SG18 8QB, UK.
